

Product Testing Consulting Services

1

Schedule an Intro Call

Before we jump into a working relationship, let's **get to know each other**. On this short 20-minute call, we'll learn about your product, create a rough outline of the scope of your needs, and explain how we can meet those needs. From the information we gather during this call, we'll **create a Service Agreement tailored to your needs with statement of work and pricing options** for you to consider.

2

Engage Home Innovation Engineering Services

Home Innovation's engineers will **help you navigate each step of the complex code conformity process**. We will help you prepare your application to evaluation services, such as ICC-ES and IAPMO-ES, identify the code requirements and test standards most appropriate to your product, **develop a test plan**, and **prepare submission packages**.

3

Gain Test Plan Approval

As **your testing advocate**, Home Innovation will coordinate with your evaluation service on refining project scope and specific testing requirements to gain test plan approval. Our engineers can provide the other engineers, architects, and code authorities involved in the process with an **effective, single point of contact, resulting in faster turnaround time, a streamlined test plan, and reduced costs**.

4

Conduct Testing

After the test plan is approved, Home Innovation **conducts required tests** and submits data for an evaluation report. Along with conducting a wide array of in-house testing, Home Innovation can **liaise with other qualified, accredited testing laboratories** to accommodate all your testing needs.

Let's talk through the possibilities. Contact me to schedule our initial conversation.
