

**2015 National Green Building Standard
ANSI Standard Revision Process**

Task Group Proposed Point Changes to 2015 NGBS Draft Standard

May 15, 2015

Preface

This document summarizes proposed revisions to the threshold levels and point assignments developed by Task Groups based on the review of the Draft Standard (March 6, 2015). All revisions are shown in underline/strikethrough format with the Draft Standard used as the baseline document.

This document encompasses changes to point system referenced in the following Public Comments:

PC054
PC077
PC093
PC152
PC164
PC170
PC143
PC192

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 1

SCOPE AND ADMINISTRATION

101 GENERAL

101.1 Title. The title of this document is the *National Green Building Standard™*, hereinafter referred to as “this Standard.”

101.2 Scope. The provisions of this Standard shall apply to design and construction of the residential portion(s) of any building, not classified as an institutional use, in all climate zones. This Standard shall also apply to subdivisions, building sites, building lots, accessory structures, and the residential portions of alterations, additions, renovations, mixed-use buildings, and historic buildings.

101.3 Intent. The purpose of this Standard is to establish criteria for rating the environmental impact of design and construction practices to achieve conformance with specified performance levels for green residential buildings, renovation thereof, accessory structures, building sites, and subdivisions. This Standard is intended to provide flexibility to permit the use of innovative approaches and techniques. This Standard is not intended to abridge safety, health, or environmental requirements contained in other applicable laws, codes, or ordinances.

101.4 Referenced documents. The codes, standards, and other documents referenced in this Standard shall be considered part of the requirements of this Standard to the prescribed extent of each such reference. The edition of the code, standard, or other referenced document shall be the edition referenced in Chapter 13.

101.5 Appendices. Where specifically required by a provision in this Standard, that appendix shall apply. Appendices not specifically required by a provision of this Standard shall not apply unless specifically adopted.

102 CONFORMANCE

102.1 Mandatory practices. This Standard does not require compliance with any specific practice except those noted as mandatory.

102.2 Conformance language. The green building provisions are written in mandatory language by way of using the verbs “to be,” “is,” “are,” etc. The intent of the language is to require the user to conform to a particular practice in order to qualify for the number of points assigned to that practice. Where the term “shall” is used, or the points are designated as “mandatory,” the provision or practice is mandatory.

102.3 Documentation. Verification of conformance to green building practices shall be the appropriate construction documents, architectural plans, site plans, specifications, builder certification and sign-off, inspection reports, or other data that demonstrates conformance as determined by the Adopting Entity. Where specific documentation is required by a provision of the Standard, that documentation is noted with that provision.

102.4 Alternative compliance methods. Alternative compliance methods shall be acceptable where the Adopting Entity finds that the proposed green building practice meets the intent of this Standard.

SCOPE AND ADMINISTRATION

SECTION 103 ADMINISTRATION

103.1 Administration. The Adopting Entity shall specify performance level(s) to be achieved as identified in Chapter 3 and shall provide a verification process to ensure compliance with this Standard.

CHAPTER 2

DEFINITIONS

201 GENERAL

201.1 Scope. Unless otherwise expressly stated, the following words and terms shall, for the purposes of this Standard, have the meanings shown in this chapter.

201.2 Interchangeability. Words used in the present tense include the future; words stated in the masculine gender include the feminine and neuter; the singular number includes the plural and the plural, the singular.

201.3 Terms defined in other documents. Where terms are not defined in this Standard, and such terms are used in relation to the reference of another document, those terms shall have the definition in that document.

201.4 Terms not defined. Where terms are not defined through the methods authorized by this section, such terms shall have ordinarily accepted meanings such as the context implies.

SECTION 202 DEFINITIONS

ACCESSORY STRUCTURE. A structure, the use of which is customarily accessory to and incidental to that of the residential building; the structure is located on the same lot or site as the residential building; the structure does not contain a dwelling unit; and (1) is classified as Group U – Utility and Miscellaneous in accordance with the ICC International Building Code, or (2) is classified as accessory in accordance with the ICC International Residential Code, or (3) is classified as accessory to the residential use by a determination of the Adopting Entity.

ADDITION. An extension or increase in the conditioned space floor area or height of a building or structure.

ADOPTING ENTITY. The governmental jurisdiction, green building program, or any other third-party compliance assurance body that adopts this Standard, and is responsible for implementation and administration of the practices herein.

ADVANCED FRAMING. Code compliant layout, framing and engineering techniques that minimize the amount of framing products used and waste generated to construct a building while maintaining the structural integrity of the building.

AFUE (Annual Fuel Utilization Efficiency). The ratio of annual output energy to annual input energy which includes any non-heating season pilot input loss, and for gas or oil-fired furnaces or boilers, does not include electrical energy.

AIR BARRIER. Material(s) assembled and joined together to provide a barrier to air leakage through the building envelope. An air barrier may be a single material or a combination of materials.

AIR HANDLER. A blower or fan used for the purpose of distributing supply air to a room, space, or area.

AIR INFILTRATION. The uncontrolled inward air leakage into a building caused by the pressure effects of wind or the effect of differences in the indoor and outdoor air density or both.

AIR, MAKE-UP. Air that is provided to replace air being exhausted.

ARCHITECTURAL COATINGS. A material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. Such materials include, but are not limited to, primers, paints, varnishes, sealers, and stains. An architectural coating is a material applied to stationary structures or their appurtenances at

DEFINITIONS

the site of installation. Coatings applied in shop applications, sealants, and adhesives are not considered architectural coatings.

BIOBASED PRODUCT. A commercial or industrial material or product that is composed of, or derived from, in whole or in significant part, biological products or renewable agricultural materials, including plant, animal, and marine materials, or forestry materials

BROWNFIELD (also EPA-Recognized Brownfield). A site in which the expansion, redevelopment or reuse of would be required to address the presence or potential presence of a hazardous substance, pollutant or contaminant. Brownfield sites include:

- . EPA-recognized brownfield sites as defined in Public Law 107-118 (H.R. 2869) “Small Business Liability Relief and Brownfields Revitalization Act,” 40 CFR, Part 300; and
- . Sites determined to be contaminated according to local or state regulation.

(i.e.: Pub.L. 107-118, § 1, Jan. 11, 2002, 115 Stat. 2356, provided that: “This Act [enacting 42 U.S.C.A. § 9628, amending this section, 42 U.S.C.A. § 9604, 42 U.S.C.A. § 9605, 42 U.S.C.A. § 9607, and 42 U.S.C.A. § 9622, and enacting provisions set out as notes under this section and 42 U.S.C.A. § 9607] may be cited as the ‘Small Business Liability Relief and Brownfields Revitalization Act’.”)

CERTIFIED GEOTHERMAL SERVICE CONTRACTOR. A person who has a current certification from the International Ground Source Heat Pump Association as an installer of ground source heat pump systems or as otherwise approved by the Adopting Entity.

CLIMATE ZONE. Climate zones are determined based on Figure 6(1).

CLUSTER DEVELOPMENT. A design technique that concentrates residential buildings and related infrastructure at a higher density within specified areas on a site. The remaining land on the site can then be used for low intensity uses such as recreation, common open space, farmland, or the preservation of historical sites and environmentally sensitive areas.

COGENERATION. An energy process that consecutively generates useful thermal and electric energy from the same fuel source.

COMMON AREA(S).

1. Areas within a site or lot that are predominantly open spaces and consist of non-residential structures, landscaping, recreational facilities, roadways and walkways, which are owned and maintained by an incorporated or chartered entity such as a homeowner’s association or governmental jurisdiction; or
2. Areas of a multi-unit building that are outside the boundaries of a dwelling unit and are shared among or serve the dwelling units; including, but not limited to, hallways, amenity and resident services areas, parking areas, property management offices, mechanical rooms, and laundry rooms.

COMPOST FACILITY. An outdoor bin or similar structure designed for the decomposition of organic material such as leaves, twigs, grass clippings, and vegetative food waste.

CONDITIONED SPACE. An area, room or space that is enclosed within the building thermal envelope and that is indirectly heated or cooled. Spaces are indirectly heated or cooled where they communicate thru openings with conditioned spaces, where they are separated from conditioned spaces by uninsulated walls, floors or ceilings or where they contain uninsulated ducts, piping or other sources of heating or cooling.

CONSTRUCTED WETLAND. An artificial wetland system (such as a marsh or swamp) created as new and/or restored habitat for native wetland plant and wildlife communities as well as to provide and/or restore wetland functions to the area. Constructed wetlands are often created as compensatory mitigation for ecological disturbances that result in a loss of natural wetlands from (1) anthropogenic discharge for wastewater, stormwater runoff, or sewage treatment; (2) mines or refineries; or (3) the development.

CONSTRUCTION WASTE MANAGEMENT PLAN. A system of measures designed to reduce, reuse, and recycle the waste generated during construction and to properly dispose of the remaining waste.

CONTINUOUS PHYSICAL FOUNDATION TERMITE BARRIER. An uninterrupted, non-chemical method of preventing ground termite infestation (e.g., aggregate barriers, stainless steel mesh, flashing, or plastic barriers).

COEFFICIENT OF PERFORMANCE (COP) – COOLING. The ratio of the rate of heat input, in consistent units, for a complete refrigerating system of some specific portion of the system under designated operating conditions.

COEFFICIENT OF PERFORMANCE (COP) – HEATING. The ratio of the rate of heat delivered to the rate of energy input, in consistent units, for a complete heat pump system, including the compressor, and, if applicable, auxiliary heat, under designated operating conditions.

DAYLIGHT CONTROL. A device or system that provides automatic control of electric light levels based on the amount of daylight.

DEMAND CONTROLLED HOT WATER LOOP. A hot water circulation (supply and return) loop with a pump that runs "on demand" when triggered by a user-activated switch or motion-activated sensor.

DESUPERHEATER. An auxiliary heat exchanger that uses superheated gases from an air conditioner's or heat pump's vapor-compression cycle to heat water.

DIRECT-VENT APPLIANCE. A fuel-burning appliance with a sealed combustion system that draws all air for combustion from the outside atmosphere and discharges all flue gases to the outside atmosphere.

DRAIN-WATER HEAT RECOVERY. A system to recapture the heat energy in drain water and use it to preheat cold water entering the water heater or other water fixtures.

DURABILITY. The ability of a building or any of its components to perform its required functions in its service environment over a period of time without unforeseen cost for maintenance or repair.

DWELLING UNIT. A single unit providing complete, independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking, and sanitation.

DYNAMIC GLAZING. Any fenestration product that has the fully reversible ability to change its performance properties, including U-factor, SHGC, or VT.

EER (Energy Efficiency Ratio). A measure of the instantaneous energy efficiency of electric air conditioning defined as the ratio of net equipment cooling capacity in Btu/h to total rate of electric input in watts under designated operating conditions. When consistent units are used, this ratio becomes equal to COP. (See also Coefficient of Performance.)

ENERGY MANAGEMENT CONTROL SYSTEM. An integrated computerized control system that is intended to operate the heating, cooling, ventilation, lighting, water heating, and/or other energy-consuming appliances and/or devices for a building in order to reduce energy consumption. Also known as Building Automation Control (BAC) or Building Management Control System (BMCS).

ENERGY MONITORING DEVICE. A device installed within a building or dwelling unit that can provide near real-time data on whole building or dwelling unit energy consumption.

ENGINEERED WOOD PRODUCTS. Products that are made by combining wood strand, veneers, lumber or other wood fiber with adhesive or connectors to make a larger composite structure.

ENVIRONMENTAL IMPACT. See **LCA (Life Cycle Analysis/Assessment)**.

DEFINITIONS

ENVIRONMENTALLY SENSITIVE AREAS.

1. Areas within wetlands as defined by federal, state, or local regulations;
2. Areas of steep slopes;
3. "Prime Farmland" as defined by the U.S. Department of Agriculture;
4. Areas of "critical habitat" for any federal or state threatened or endangered species;
5. Areas defined by state or local jurisdiction as environmentally sensitive.

EROSION CONTROLS. Measures that prevent soil from being removed by wind, water, ice, or other disturbance.

EXISTING BUILDING. A building erected prior to the date of adoption of the appropriate code, or one for which a legal building permit has been issued.

EXISTING SUBDIVISION. An area of land, defined as "Site" in this Chapter, that has received all development approvals and has been platted and all infrastructure is complete at time of application to this Standard.

FROST-PROTECTED SHALLOW FOUNDATION. A foundation that does not extend below the design frost depth and is protected against the effects of frost in compliance with SEI/ASCE 32-01 or the provisions for frost-protected shallow foundations of the ICC IBC or IRC, as applicable.

GRADE PLANE. A reference plane representing the average of the finished ground level adjoining the building at all exterior walls. Where the finished ground level slopes away from the exterior walls, the reference plane shall be established by the lowest points within the area between the building and the lot line or, where the lot line is more than 6 feet (1830 mm) from the building, between the structure and a point 6 feet (1830 mm) from the building.

GRAY WATER. Untreated waste water that has not come into contact with waste water from water closets, urinals, kitchen sinks, or dishwashers. Gray water includes, but is not limited to, waste water from bathtubs, showers, lavatories, clothes washers, and laundry trays.

GREYFIELD SITE. A previously developed site with little or no contamination or perceived contamination.

GRID-INTERACTIVE ELECTRIC THERMAL STORAGE (GETS). An energy storage system that provides electric system grid operators such as utilities, independent system operators (ISOs) and regional transmission organizations (RTOs), with variable control of a building's space heating and service water heating end uses.

GROUND SOURCE HEAT PUMP. Piping buried in horizontal or vertical excavations or placed in a body of water for the purpose of transporting heat transfer liquid to and from a heat pump. Included in this definition are closed loop systems in which the liquid is recirculated and open loop systems in which the liquid is drawn from a well or other source.

HARDSCAPE. Asphalt, concrete, masonry, stone, wood, and other non-plant elements external to the building shell on a landscape.

HEAT PUMP. An appliance having heating or heating/cooling capability and which uses refrigerants to extract heat from air, liquid, or other sources.

HIGH-EFFICACY LAMPS. Compact fluorescent lamps (CFL); light emitting diode (LED); T-8 or smaller diameter linear fluorescent lamps; or lamps with a minimum efficacy of 1) 60 lumens per watt for lamps over 40 watts, 2) 50 lumens per watt for lamps over 15 watts to 40 watts, or 3) 40 lumens per watt for lamps 15 watts or less.

HISTORIC BUILDINGS. Buildings that are listed in or eligible for listing in the National Register of Historic Places (NRHP) or designated as being of historic or architectural significance under an appropriate state or local law.

HSPF (Heating Seasonal Performance Factor). The total seasonal heating output of a heat pump, in Btu, divided by the total electric energy input during the same period, in watt-hours using a defined test methodology.

HYDROZONING. A landscape practice that groups plants with similar watering needs together in an effort to conserve water.

ICF (INSULATING CONCRETE FORMS). A concrete forming system using stay-in-place forms of rigid foam plastic insulation, a hybrid of cement and foam insulation, a hybrid of cement and wood chips, or other insulating material for constructing cast-in-place concrete walls.

IMPERVIOUS SURFACE. Hard-covered ground area that prevents/retards the entry of water into the soil at that location, resulting in water flowing to another location. (also see HARDSCAPE)

INDIRECT-FIRED WATER HEATER. A water storage tank, typically with no internal heating elements, that is connected by piping to an external heating source such as a gas or oil-fired boiler.

INFILL. A location including vacant or underutilized land that may apply to either a site or a lot and is located in an area served by existing infrastructure such as centralized water and sewer connections, roads, drainage, etc., and the site boundaries are adjacent to existing development on at least one side.

INTEGRATED PEST MANAGEMENT. A sustainable approach to managing pests by combining biological, cultural, physical, and chemical tools in a way that minimizes economic, health, and environmental risks.

INVASIVE PLANTS: Plants for which the species are not native to the ecosystem under consideration and that cause, or are likely to cause, economic or environmental harm or harm to human, animal or plant health. Consideration for inclusion as invasive plants shall include at a minimum those plants identified on lists created or approved by governmental entities as applicable.

LANDSCAPE PRACTICE (LANDSCAPING). Any activity that modifies the visible features of an area of land. It may include:

1. Living elements, such as flora or fauna;
2. Natural elements such as terrain shape, elevation, or bodies of water;
3. Created or installed elements such as fences or other material objects;
4. Abstract elements such as the weather and lighting conditions.

LAVATORY FAUCET. A valve for dispensing hot and/or cold water to a basin used for washing hands and face, but not for food preparation.

LCA (Life Cycle Analysis/Assessment). An accounting and evaluation of the environmental aspects and potential impacts of materials, products, assemblies, or buildings throughout their life (from raw material acquisition through manufacturing, construction, use, operation, demolition, and disposal).

Level 2 Electric Vehicle Charging Station. A device that is used to supply electricity to a plug-in hybrid electric vehicle or a plug-in electric vehicle and is rated for use with 208 to 240 Volts AC input.

Level 3 Electric Vehicle Charging Station. A device that is used to supply electricity to a plug-in hybrid electric vehicle or a plug-in electric vehicle and is rated for use with 208 to 500 Volts, 3 phase electric AC input.

LOT. A portion or parcel of land considered as a unit.

LOW-IMPACT DEVELOPMENT. A storm water management approach that attempts to recreate the predevelopment hydrology of a site by using lot level topography and landscape to deter storm water runoff and promote soil infiltration and recharge.

LOW-VOC (PRODUCTS). Products or materials with volatile organic compound (VOC) emissions equal to or below the established thresholds as defined in the referenced VOC emissions requirements for each applicable section in this document. (also see VOC)

MAJOR COMPONENT.

DEFINITIONS

1. All structural members and structural systems.
2. Building materials or systems that are typically applied as a part of over 50% of the surface area of the foundation, wall, floor, ceiling, or roof assemblies.

MANUFACTURED HOME CONSTRUCTION. Three-dimensional sections of the complete building or dwelling unit built in a factory in conformance with the HUD Manufactured Home Construction and Safety Standards (24 CFR, Part 3280) and transported to the jobsite to be joined together on a foundation.

MASS WALLS. Above-grade masonry or concrete walls having a mass greater than or equal to 30 pounds per square foot (146 kg/m²), solid wood walls having a mass greater than or equal to 20 pounds per square foot (98 kg/m²), and any other walls having a heat capacity greater than or equal to 6 Btu/ft²•°F [266 J/(m² • K)] with a minimum of 50 percent of the required R-value on the exterior side of the wall's centerline.

MERV (Minimum Efficiency Reporting Value). Minimum efficiency-rated value for the effectiveness of air filters.

MINOR COMPONENT. Building materials or systems that are not considered a major component. (Also see Major Component)

MIXED-USE BUILDING. A building that incorporates more than one use (e.g., residential, retail, commercial) in a single structure.

MIXED-USE DEVELOPMENT. A project that incorporates more than one use (e.g., residential, retail, commercial) on the same site.

MODULAR CONSTRUCTION. Three-dimensional sections of the complete building or dwelling unit built in a factory and transported to the jobsite to be joined together on a permanent foundation.

MULTI-UNIT BUILDING. A building containing multiple dwelling units and classified as R-2 under the ICC IBC.

NET DEVELOPABLE AREA. The land on which buildings may be constructed. Any land where buildings cannot be constructed due to environmental restrictors, or that is used for infrastructure or public purposes such as parks, schools, etc., is not considered net developable area.

NEW CONSTRUCTION. Construction of a new building.

OCCUPANCY SENSOR. Devices that generally use passive infrared and/or ultrasonic technology or a combination of multiple sensing technologies to automatically turn lights on and off or from one preset light level to another based on whether or not the sensor detects that a space is occupied.

ON-SITE RENEWABLE ENERGY SYSTEM. An energy generation system located on the building or building site that derives its energy from a renewable energy source.

OPEN SPACE. An area of land or water that (1) remains in its natural state, (2) is used for agriculture, or (3) is free from intensive development.

PANELIZED ASSEMBLIES. Factory-assembled wall panels, roof trusses, and/or other components installed on-site.

PERFORMANCE PATH. An alternative set of standards (to the Prescriptive Path) with defined performance metrics, as specified in Chapter 7 of this Standard.

PERMEABLE MATERIAL. A material that permits the passage of water vapor and/or liquid.

PLUMBING FIXTURE. A receptor or device that requires both a water-supply connection and a discharge to the drainage system, such as water closets, lavatories, bathtubs, and sinks.

PRECUT. Materials cut to final size prior to delivery to site and ready for assembly.

PRESCRIPTIVE PATH. A set of provisions in a code or standard that must be adhered to for compliance.

PRESERVATION. The process of applying measures to maintain and sustain the existing materials, integrity, and/or form of a building, including its structure and building artifacts.

PROGRAMMABLE COMMUNICATING THERMOSTAT. A whole building or whole dwelling unit thermostat that can be monitored and controlled remotely.

PROJECTION FACTOR. The ratio of the overhang width to the overhang height above the door threshold or window sill ($PF = A/B$).

Projection Factor

R-VALUE (THERMAL RESISTANCE). The inverse of the time rate of heat flow through a building thermal envelope element from one of its bounding surfaces to the other for a unit temperature difference between the two surfaces, under steady state conditions, per unit area (hXt^2xF/Btu).

RECYCLE. To recover and reprocess manufactured goods into new products.

RECYCLED CONTENT. Resources containing post-consumer or pre-consumer (post-industrial) recycled content.

POST-CONSUMER RECYCLED CONTENT. Proportion of recycled material in a product generated by households or by commercial, industrial, and institutional facilities in their role as end users of the product that can no longer be used for its intended purpose. This includes returns of material from the distribution chain.

PRE-CONSUMER (POST-INDUSTRIAL) RECYCLED CONTENT. Proportion of recycled material in a product diverted from the waste stream during the manufacturing process. Pre-consumer recycled content does not include reutilization of materials such as rework, regrind, or scrap generated in a process and capable of being reclaimed within the same process that generated it.

REGIONAL MATERIAL. Material that originates, is produced, grows naturally, or occurs naturally within: (1) 500 miles (804.7 km) of the construction site if transported by truck or (2) 1,500 miles (2,414 km) of the construction site if transported for not less than 80 percent of the total transport distance by rail or water. Products that are assembled or produced from multiple raw materials are considered regional materials if the weighted average (by weight or volume) of the distance the raw materials have been transported meet the distance criteria.

REMODELING. The process of restoring or improving an existing building, dwelling unit, or property.

RENEWABLE ENERGY. Energy derived from renewable energy.

RENEWABLE ENERGY SOURCE. Energy derived from solar radiation, wind, hydropower, waves, tides, biogas, biomass, or geothermal energy.

REPLACEMENT. The act or process of replacing material or systems.

REUSE. To divert a material, product, component, module, or a building from the waste stream in order to use it again.

SEDIMENT CONTROLS. Practices used on building sites to minimize the movement of sand, soil, and particulates or dust from construction from reaching waterways.

DEFINITIONS

SEER (Seasonal Energy Efficiency Ratio). The total cooling output of an electric air conditioner (or heat pump) during its normal annual usage period for cooling, in Btu, divided by the total electric energy input during the same period, in watt-hours (Wh), expressed as Btu/Wh. SEER is the cooling performance equivalent measurement of HSPF.

SHGC (Solar Heat Gain Coefficient). The ratio of the solar heat gain entering the space through the fenestration assembly to the incident solar radiation. Solar heat gain includes directly transmitted solar heat and absorbed solar radiation which is then reradiated, conducted, or convected into the space.

SIP (Structural Insulated Panel). A structural sandwich panel that consists of a light-weight foam plastic core securely laminated between two thin, rigid wood structural panel facings; a structural panel that consists of lightweight foam plastic and cold-formed steel sheet or structural cold-formed steel members; or other similar non-interrupted structural panels.

SITE. Any area of land that is or will be developed into two or more parcels of land intended for multiple ownership, uses, or structures and designed to be part of an integrated whole such as a residential subdivision, mixed-use development, or master-planned community. Site, as defined, generally contains multiple lots. (also see LOT)

SMART APPLIANCE. A product that has the capability to receive, interpret, and act on a signal transmitted by a utility, third-party energy service provider, or home energy management device, and automatically adjust its operation depending on both the signal's contents and settings by the consumer. The product has this capability either built-in or added through an external device that easily connects to the appliance.

SOLID FUEL-BURNING APPLIANCE. A chimney connected device designed for purposes of heating, cooking, or both that burns solid fuel.

STEEP SLOPES. Slopes equal to or greater than 25 percent ($\geq 25\%$).

STORY. That portion of a building included between the upper surface of a floor and the upper surface of the floor or roof next above.

STORY ABOVE GRADE. Any story having its finished floor surface entirely above grade plane, or in which the finished surface of the floor next above is:

- . More than 6 feet (1829mm) above grade plane; or
- . More than 12 feet (3658 mm) above the finished ground level at any point.

STRUCTURAL SYSTEMS (Existing buildings, Section 305.3). Load-bearing elements and systems that transfer lateral and vertical loads to the foundation and may include, but are not limited to load-bearing walls (interior or exterior), roofs, and other structural elements.

SUBDIVISION. A tract, lot, or parcel of land divided into two or more lots, plats, sites, or other divisions of land.

SWPPP (Stormwater Pollution Prevention Plan). A site-specific, written document or report that identifies required features specifically represented in the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (CGP).

TERRAIN ADAPTIVE ARCHITECTURE. Architecture or landscape architecture where the design of the building or site has been specifically adapted to preserve unique features of the terrain.

UA. The total U-factor times area for a component or building.

URBAN. Areas within a designated census tract of 1,000 people per square mile or located within a Metropolitan Statistical Area primary city, as designated by the U.S. Census Bureau.

U-FACTOR (THERMAL TRANSMITTANCE). The coefficient of heat transmission (air to air) through a building envelope component or assembly, equal to the time rate of heat flow per unit area and unit temperature difference between the warm side and cold side air films (Btu/h • ft² • °F) [W/(m² • K)].

VACANCY SENSOR. Devices that generally use passive infrared and/or ultrasonic technology or a combination of multiple sensing technologies to determine if a space is occupied. If a space is unoccupied, the device will automatically turn the lights off, but the device does not automatically turn lights on.

VAPOR RETARDER CLASS. A measure of the ability of a material or assembly to limit the amount of moisture that passes through that material or assembly. Vapor retarder class shall be defined using the desiccant method with Procedure A of ASTM E 96 as follows:

Class I: 0.1 perm or less

Class II: 0.1 < perm = 1.0 perm

Class III: 1.0 < perm = 10 perm

VENTILATION. The natural or mechanical process of supplying conditioned or unconditioned air to, or removing such air from, any space.

VOC (Volatile Organic Compounds). A class of carbon-based molecules in substances and organic compounds that readily release gaseous vapors at room temperature as indoor pollutants and when reacting with other exterior pollutants can produce ground-level ozone.

WASTE HEAT. Heat discharged as a byproduct of one process to provide heat needed by a second process.

WATER FACTOR (WATER CONSUMPTION FACTOR). The quantity of water, in gallons per cycle (Q), divided by a clothes washing machine clothes container capacity in cubic feet (C). The equation is: $WF=Q/C$

WATER-RESISTIVE BARRIER. A material behind an exterior wall covering that is intended to resist liquid water that has penetrated behind the exterior covering from further intruding into the exterior wall assembly.

WETLANDS. Areas that are inundated or saturated by the surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.

WILDLIFE HABITAT/CORRIDOR. An ecological or environmental area that is inhabited by a particular species of animal, plant, or other type of organism. It is the natural environment in which an organism lives or the physical environment that surrounds (influences and is utilized by) a species population.

WOOD-BASED PRODUCT. Any material that consists of a majority of wood or constituents derived from wood (e.g., wood fiber) as measured by either weight or volume.

CHAPTER 3

COMPLIANCE METHOD

301 GENERAL

301.1 Environmental rating levels. The building, project, site, and/or development environmental rating level shall consist of all mandatory requirements plus points assessed using the point system specified within this chapter. The rating level shall be in accordance with Section 302, 303, 304, or 305.3, as applicable. The designation for remodeled functional areas shall be in accordance with Section 305.4. The designation for accessory structures shall be in accordance with Section 306.

301.2 Awarding of points. Points shall be awarded as follows:

- (1) The maximum number of points that can be awarded for each practice is noted with that practice.
- (2) Point allocation for multi-unit buildings shall be as prescribed in Section 304.
- (3) The Adopting Entity shall allow the use of new and innovative products and practices deemed to meet the intent of this Standard. Points assigned for any new product or practice shall be determined by the Adopting Entity. A maximum of 20 points may be awarded at the discretion of the Adopting Entity. Innovative practices and products shall fall under Chapters 5-10 (Categories 1-6 in Table 303); however these points shall only be assigned under Category 7. Point values shall be determined by comparing the innovative product or practice to a practice or product already described in the Standard. The applicant shall supply demonstrable, quantified data to support the innovative product or practice and to determine the practice's functional equivalent in the Standard for the points to be awarded.

302 GREEN SUBDIVISIONS

302.1 Site design and development. The threshold points required for the environmental rating levels to qualify a new or existing subdivision as green under this Standard shall be in accordance with Table 302 and based on points in Chapter 4.

Table 302
Threshold Point Ratings for Site Design and Development

Green Subdivision Category		Rating Level Points			
		One Star	Two Stars	Three Stars	Four Stars
Chapter 4	Site Design and Development	95	122	149	176

303 GREEN BUILDINGS

303.1 Green buildings. The threshold points required for the environmental rating levels for a green building shall be in accordance with Table 303. To qualify for one of these rating levels, all of the following shall be satisfied:

- (1) The threshold number of points, in accordance with Table 303, shall be achieved as prescribed in Categories 1 through 6. The lowest level achieved in any category shall determine the overall rating level achieved for the building.
- (2) In addition to the threshold number of points in each category, all mandatory provisions of each category shall be implemented.

COMPLIANCE METHOD

- (3) In addition to the threshold number of points prescribed in Categories 1 through 6 (which corresponds to Chapters 5-10), the additional points prescribed in Category 7 shall be achieved from any of the categories. Where deemed appropriate by the Adopting Entity based on regional conditions, additional points from Category 7 may be assigned to another category (or categories) to increase the threshold points required for that category (or categories). Points shall not be reduced by the Adopting Entity in any of the six other categories.

**Table 303
Threshold Point Ratings for Green Buildings**

Green Building Categories			Rating Level Points ^{(1) (2)}			
			BRONZE	SILVER	GOLD	EMERALD
1.	Chapter 5	Lot Design, Preparation, and Development	50	64	93	121
2.	Chapter 6	Resource Efficiency	43	59	89	119
3.	Chapter 7	Energy Efficiency	30	60	80	100
4.	Chapter 8	Water Efficiency	25	39	67	92
5.	Chapter 9	Indoor Environmental Quality	25	42	69	97
6.	Chapter 10	Operation, Maintenance, and Building Owner Education	8	10	11	12
7.		Additional Points from Any Category	50	75	100	100
Total Points:			231	349	509	641

- (1) In addition to the threshold number of points in each category, all mandatory provisions of each category shall be implemented.
- (2) For dwelling units greater than 4,000 square feet (372 m²), the number of points in Category 7 (Additional Points from Any Category) shall be increased in accordance with Section 601.1. The "Total Points" shall be increased by the same number of points.

304 GREEN MULTI-UNIT BUILDINGS

304.1 Multi-unit buildings. All residential portions of a building shall meet the requirements of this Standard. Partial compliance shall not be allowed. Unless otherwise noted, all units and residential common areas within a multi-unit building shall: 1) meet all mandatory requirements; and 2) achieve the point threshold required for the chosen environmental rating level in accordance with Table 303; and 3) achieve the same environmental rating level. Points for the green building practices that apply to multiple units shall be credited once for the entire building. Where points are credited, including where a weighted average is used, practices shall be implemented in all units, as applicable. Where application of a prescribed practice allows for a different number of points for different units in a multi-unit building, the fewer number of points shall be awarded, unless noted that a weighted average is used.

305 GREEN REMODELING

305.1 Compliance. Compliance with Section 305 shall be voluntary unless specifically adopted as mandatory by the Adopting Entity.

305.2 Compliance options. The criteria for existing buildings shall be in accordance with Section 305.3 for whole-building ratings or Section 305.4 for compliance designations of building functional areas.

305.3 Whole-building rating criteria

305.3.1 Applicability. The provisions of Section 305.3 shall apply to remodeling of existing buildings. In addition to the foundation, at least 50 percent of the structural systems of the existing building shall remain in place after the remodel for the building to be eligible for compliance under Section 305.3.

305.3.1.1 Additions. For a remodeled building that includes an addition, the entire building including the addition shall comply with the criteria of Section 305.3. The total above-grade conditioned area added during a remodel shall not exceed 75% of the existing building’s above-grade conditioned area. For multi-unit buildings, the above-grade conditioned area shall be based on the entire building including all dwelling units and common areas.

305.3.2 Rating scope. The building rating achieved under Section 305.3 and the associated compliance criteria apply to the entire building after the remodel including any additions.

305.3.3 Mandatory practices. The building, including any additions and common areas, shall satisfy all practices designated as mandatory in Chapter 11.

305.3.4 Rating level. A minimum rating level of Bronze shall be achieved in each of the following categories: Energy efficiency (Sections 305.3.5), Water efficiency (Section 305.3.6), and Prescriptive practices (Section 305.3.7). The building rating level shall be the lowest rating level achieved in Sections 305.3.5, 305.3.6, and 305.3.7.

305.3.5 Energy efficiency. The energy efficiency rating level shall be based on the reduction in energy consumption resulting from the remodel in accordance with Table 305.3.5.

**Table 305.3.5
Energy Rating Level Thresholds**

	Rating Level			
	BRONZE	SILVER	GOLD	EMERALD
Reduction in energy consumption	15%	25%	35%	45%

305.3.5.1 Energy consumption reduction. The reduction in energy consumption resulting from the remodel shall be based on the estimated annual energy cost savings or source energy savings as determined by a third-party energy audit and analysis or utility consumption data. The source energy multiplier for electricity shall be 3.16. The source energy multiplier for fuels other than electricity shall be 1.1. The reduction shall be the percentage difference between the consumption per square foot before and after the remodel calculated as follows:

$$\frac{[(\text{consumption per square foot before remodel} - \text{consumption per square foot after remodel}) / \text{consumption per square foot before remodel}] * 100\%}{}$$

The occupancy and lifestyle assumed and the method of making the energy consumption estimates shall be the same for estimates before and after the remodel. The building configuration for the after-remodel estimate shall include any additions to the building or other changes to the configuration of the conditioned space. For multi-unit buildings, the energy consumption shall be based on the entire building including all dwelling units and common areas.

305.3.6 Water efficiency. The water efficiency rating level shall be based on the reduction in water consumption resulting from the remodel in accordance with Table 305.3.6.

**Table 305.3.6
Water Rating Level Thresholds**

	Rating Level			
	BRONZE	SILVER	GOLD	EMERALD
Reduction in water consumption	20%	30%	40%	50%

305.3.6.1 Water consumption reduction. Water consumption shall be based on the estimated annual use as determined by audit and analysis or use of utility consumption data. The reduction shall be the percentage difference between the consumption before and after the remodel calculated as follows:

$$[(\text{consumption before remodel} - \text{consumption after remodel}) / \text{consumption before remodel}] * 100\%$$

The occupancy and lifestyle assumed and the method of making the water consumption estimates shall be the same for estimates before and after the remodel. The building configuration for the after-remodel estimate shall include any changes to the configuration of the building such as additions or new points of water use. For multi-unit buildings, the water consumption shall be based on the entire building including all dwelling units and common areas.

305.3.7 Prescriptive practices. The point thresholds for the environmental rating levels based on compliance with the Chapter 11 prescriptive practices shall be in accordance with Table 305.3.7. Any practice listed in Chapter 11 shall be eligible for contributing points to the prescriptive threshold ratings. The attributes of the existing building that were in compliance with the prescriptive practices of Chapter 11 prior to the remodel and remain in compliance after the remodel shall be eligible for contributing points to the prescriptive threshold ratings.

**Table 305.3.7
Prescriptive Threshold Point Ratings**

	Rating Level			
	BRONZE	SILVER	GOLD	EMERALD
Chapter 11 prescriptive thresholds	88	125	181	225

305.4 Criteria for remodeled functional areas of buildings

305.4.1 Applicability. The provisions of Section 305.4 shall apply to remodeling of one or more of the following functional areas of the existing building as follows:

1. Addition, kitchen, bathroom, or basement in buildings other than multi-unit buildings.
2. Kitchen or bathroom of an individual dwelling unit in a multi-unit building.

305.4.1.1 Additions. The total above-grade conditioned area added during a remodel shall not exceed 400 square feet.

305.4.2 Compliant. Projects that meet all applicable requirements of Chapter 12 for that functional area shall be designated as *compliant*.

305.4.3 Designation. The designation achieved under Section 305.4 applies only to the specific functional area of the existing building. The existing building may have more than one *compliant* functional area.

305.4.4 Additions. A bathroom(s), kitchen, or finished basement included in an addition shall comply with all criteria specifically applicable to those functional areas in accordance with the provisions of Chapter 12.

305.4.5 Mandatory. Projects shall satisfy all applicable practices designated as mandatory in Chapter 12.

305.4.6 Existing attributes. The attributes of the existing building that were in compliance with the applicable provisions of Chapter 12 prior to the remodel and remain in compliance after the remodel shall be eligible for contributing to demonstration of compliance under Section 305.4.

306 GREEN ACCESSORY STRUCTURES

306.1 Applicability. The designation criteria for accessory structures shall be in accordance with Appendix E.

306.2 Compliance. Compliance with Appendix E shall be voluntary unless specifically adopted as mandatory. If specifically adopted, the adopting entity shall establish rules for compliance with Appendix E.

CHAPTER 4

SITE DESIGN AND DEVELOPMENT

GREEN BUILDING PRACTICES	POINTS
400 SITE DESIGN AND DEVELOPMENT	
400.0 Intent. This section applies to land development for the eventual construction of buildings or additions thereto that contain dwelling units. The rating earned under Section 302 based on practices herein, applies only to the site as defined in Chapter 2. The buildings on the site achieve a separate rating level or designation by complying with the provisions of Section 303, 304, 305, or 306, as applicable.	
401 SITE SELECTION	
401.0 Intent. The site is selected to minimize environmental impact by one or more of the following:	
401.1 Infill site. An infill site is selected.	7
401.2 Greyfield site. A greyfield site is selected.	7
401.3 Brownfield site. A brownfield site is selected.	8
402 PROJECT TEAM, MISSION STATEMENT, AND GOALS	
402.0 Intent. The site is designed and constructed by a team of qualified professionals trained in green development practices.	
402.1 Team. A knowledgeable team is established and team member roles are identified with respect to green lot design, preparation, and development. The project's green goals and objectives are written into a mission statement.	4
402.2 Training. Training is provided to on-site supervisors and team members regarding the green development practices to be used on the project.	3
402.3 Project checklist. A checklist of green development practices to be used on the project is created, followed, and completed by the project team regarding the site.	Mandatory 4
402.4 Development agreements. Through a developer agreement or equivalent, the developer requires purchasers of lots to construct the buildings in compliance with this Standard (or equivalent) certified to a minimum bronze rating level.	6

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

403 SITE DESIGN

<p>403.0 Intent. The project is designed to avoid detrimental environmental impacts, minimize any unavoidable impacts, and mitigate for those impacts that do occur. The project is designed to minimize environmental impacts and to protect, restore, and enhance the natural features and environmental quality of the site.</p> <p style="text-align: center;">(To acquire points allocated for the design, the intent of the design is implemented.)</p>

403.1 Natural resources. Natural resources are conserved by one or more of the following:	
(1) A natural resources inventory is used to create the site plan.	Mandatory 5
(2) A plan to protect and maintain priority natural resources/areas during construction is created. (also see Section 404 for guidance in forming the plan.)	Mandatory 5
(3) Member of builder’s project team participates in a natural resources conservation program.	4
(4) Streets, buildings, and other built features are located to conserve high priority vegetation.	5
(5) Developer has a plan for removal or containment of invasive plants, as identified by a qualified professional, from the disturbed areas of the site.	3
(6) Developer has a plan for removal or containment of invasive plants, as identified by a qualified professional, on the undisturbed areas of the site.	6

403.2 Building orientation. A minimum of 75 percent of the building sites are designed with the longer dimension of the structure to face within 20 degrees of south.	6
--	----------

403.3 Slope disturbance. Slope disturbance is minimized by one or more of the following:	
(1) Hydrological/soil stability study is completed and used to guide the design of all buildings on the site.	5
(2) All or a percentage of roads are aligned with natural topography to reduce cut and fill.	
(a) 10 percent to 25 percent	1
(b) 25 percent to 75 percent	4
(c) greater than 75 percent	6
(3) Long-term erosion effects are reduced by the use of clustering, terracing, retaining walls, landscaping, and restabilization techniques.	6

403.4 Soil disturbance and erosion. A site Stormwater Pollution Prevention Plan (SWPPP) is developed in accordance with applicable stormwater Construction General Permits. The plan includes one or more of the following:	
(1) Construction activities are scheduled to minimize length of time that soils are exposed.	4
(2) Utilities are installed by alternate means such as directional boring in lieu of open-cut trenching. Shared easements or common utility trenches are utilized to minimize earth	5

GREEN BUILDING PRACTICES	POINTS
disturbance. Low ground pressure equipment or temporary matting is used to minimize excessive soil consolidation.	
(3) Limits of clearing and grading are demarcated.	4

403.5 Stormwater management. The stormwater management system is designed to use low impact development/green infrastructure practices to preserve, restore or mitigate changes in site hydrology due to land disturbance and the construction of impermeable surfaces through the use of one or more of the following techniques:	
(1) A site assessment is conducted and a plan prepared and implemented that identifies important existing permeable soils, natural drainage ways and other water features, e.g., depressional storage, onsite to be preserved in order to maintain site hydrology.	7
(2) A hydrologic analysis is conducted that results in the design of a stormwater management system that maintains the predevelopment (stable, natural) runoff hydrology of the site through the development or redevelopment process. Ensure that post construction runoff rate, volume and duration do not exceed predevelopment rates, volume and duration.	10
(3) Low Impact Development/Green infrastructure stormwater management practices to promote infiltration and evapotranspiration such as, but not limited to, vegetated swales, bio-retention cells, vegetated tree boxes and planters, green roofs, rain gardens, wetlands, french drains, drywells, or permeable pavements are used to manage rainfall on the lot and prevent the off-lot discharge of runoff from all storms up to and including the volume of following storm events:	
(a) 80th percentile storm event	5
(b) 90th percentile storm event	8
(c) 95th percentile storm event	10
(4) Permeable materials are used for driveways, parking areas, walkways and patios according to the following percentages:	
(a) <u>less than 25 percent</u>	2
(b) <u>25-50 percent</u>	5
(c) <u>greater than 50 percent</u>	10

403.6 Landscape plan. A landscape plan is developed to limit water and energy use in common areas while preserving or enhancing the natural environment utilizing one or more of the following:	
(1) A plan is formulated to restore or enhance natural vegetation that is cleared during construction. Landscaping is phased to coincide with achievement of final grades to ensure denuded areas are quickly vegetated.	6
(2) On-site native or regionally appropriate trees and shrubs are conserved, maintained, and reused for landscaping to the greatest extent possible.	6

GREEN BUILDING PRACTICES		POINTS
(3)	Turf grass species, other vegetation, and trees that are native or regionally appropriate for local growing conditions are selected giving consideration to biodiversity and water use and specified on the lot plan. Non-invasive vegetation is selected.	7
(4)	EPA WaterSense Water Budget Tool is used to determine the maximum percentage of turf areas.	2
(5)	Turfgrass is integrated with maintenance tolerant, non-invasive flowering herbaceous plants in an amount to achieve not less than 10% of the groundcover. Plants should typically flower at less than 6 inches in height.	3
(6)	Non-potable irrigation water is available to common areas	2
(7)	Non-potable irrigation water is available to lots.	4
(8)	Plants with similar watering needs are grouped (hydrozoning).	4
(9)	Species and locations for tree planting are identified and utilized to increase summer shading of streets, parking areas, and buildings and to moderate temperatures.	5
(10)	Vegetative wind breaks or channels are designed as appropriate to local conditions.	4
(11)	On-site tree trimmings or stump grinding of regionally appropriate trees are used to provide protective mulch during construction or as base for walking trails, and cleared trees are recycled as sawn lumber or pulp wood.	4
(12)	An integrated common area pest management plan to minimize chemical use in pesticides and fertilizers is developed.	4
(13)	Plans for the common area landscape watering system include a weather-based or moisture-based controller. Required irrigation systems are designed in accordance with the Irrigation Association's <i>Turf and Landscape Best Management Practices</i> .	6
(14)	Trees that might otherwise be lost due to site construction are transplanted to other areas on-site or off-site using tree-transplanting techniques to ensure a high rate of survival.	4
(15)	Gray water irrigation systems are used to water common areas. Gray water used for irrigation conforms to all criteria of Section 802.1.	7
(16)	Cisterns, rain barrels, and similar tanks are designed to intercept and store runoff. These systems may be above or below ground, and they may drain by gravity or be pumped. Stored water may be slowly released to a pervious area, and/or used for irrigation of lawn, trees, and gardens located in common areas.	6
403.7 Wildlife habitat. Measures are planned that will support wildlife habitat.		6
403.8 Operation and maintenance plan. An operation and maintenance plan (manual) is prepared and outlines ongoing service of common open area, utilities (storm water, waste water), and environmental management activities.		6

GREEN BUILDING PRACTICES		POINTS
403.9 Existing buildings. Existing building(s) and structure(s) is/are preserved, reused, modified, or disassembled for reuse or recycling of building materials.		8
403.10 Existing and recycled materials. Existing pavements, curbs, and aggregates are salvaged and reincorporated into the development or recycled asphalt or concrete materials are used as follows. (Points awarded for every 10 percent of total materials used for pavement, curb, and aggregate that meet the criteria of this practice. The percentage is consistently calculated on a weight, volume, or cost basis.)		15 Max
(1)	Existing pavements, curbs, and aggregates are reincorporated into the development.	3
(2)	Recycled asphalt or concrete with at least 50 percent recycled content is utilized in the project.	2
403.11 Demolition of existing building. A demolition waste management plan is developed, posted at the jobsite, and implemented to recycle and/or salvage with a goal of recycling or salvaging a minimum of 50 percent of the nonhazardous demolition waste. (One additional point awarded for every 10 percent of demolition waste recycled and/or salvaged beyond 50 percent).		<u>5</u> 10 Max
403.12 Environmentally sensitive areas. Environmentally sensitive areas are as follows:		
(1)	Environmentally sensitive areas including steep slopes, prime farmland, critical habitats, stream protection areas, and wetlands are avoided as follows:	
(a)	<25 percent of environmentally sensitive areas left undeveloped	2
(b)	25 percent – 75 percent of environmentally sensitive areas left undeveloped	4
(c)	>75 percent of environmentally sensitive areas left undeveloped	7
(2)	Environmentally sensitive areas are permanently protected by a conservation easement or similar mechanism.	10
404		
SITE DEVELOPMENT AND CONSTRUCTION		
404.0 Intent. Environmental impact during construction is avoided to the extent possible; impacts that do occur are minimized, and any significant impacts are mitigated.		
404.1 On-site supervision and coordination. On-site supervision and coordination is provided during clearing, grading, trenching, paving, and installation of utilities to ensure that specified green development practices are implemented. (also see Section 403.4)		5
404.2 Trees and vegetation. Designated trees and vegetation are preserved by one or more of the following:		
(1)	Fencing or equivalent is installed to protect trees and other vegetation.	4
(2)	Trenching, significant changes in grade, compaction of soil, and other activities are avoided in critical root zones (canopy drip line) in “tree save” areas.	5

GREEN BUILDING PRACTICES		POINTS
(3)	Damage to designated existing trees and vegetation is mitigated during construction through pruning, root pruning, fertilizing, and watering.	4
404.3 Soil disturbance and erosion. On-site soil disturbance and erosion are minimized by implementation of one or more of the following:		
(1)	Limits of clearing and grading are staked out prior to construction.	5
(2)	“No disturbance” zones are created using fencing or flagging to protect vegetation and sensitive areas from construction vehicles, material storage, and washout.	4
(3)	Sediment and erosion controls are installed and maintained.	5
(4)	Topsoil is stockpiled and covered with tarps, straw, mulch, chipped wood, vegetative cover, or other means capable of protecting it from erosion for later use to establish landscape plantings.	5
(5)	Soil compaction from construction equipment is reduced by distributing the weight of the equipment over a larger area by laying lightweight geogrids, mulch, chipped wood, plywood, OSB (oriented strand board), metal plates, or other materials capable of weight distribution in the pathway of the equipment.	4
(6)	Disturbed areas are stabilized within the EPA-recommended 14-day period.	4
(7)	Soil is improved with organic amendments and mulch.	4
404.4 Wildlife habitat. Measures are implemented to support wildlife habitat.		
(1)	Wildlife habitat is maintained.	5
(2)	Measures are instituted to establish or promote wildlife habitat.	5
(3)	Open space is preserved as part of a wildlife corridor.	6
(4)	Builder or member of builder’s project team participates in a wildlife conservation program.	5
405 INNOVATIVE PRACTICES		
405.0 Intent. Innovative site design, preparation, and development practices are used to enhance environmental performance. Waivers or variances from local development regulations are obtained, and innovative zoning practices are used to implement such practices, as applicable.		
405.1 Driveways and parking areas. Driveways and parking areas are minimized or mitigated by one or more of the following:		
(1)	Off-street parking areas are shared or driveways are shared; on-street parking is utilized; and alleys (shared common area driveways) are used for rear-loaded garages.	5
(2)	In multi-unit projects, parking capacity is not to exceed the local minimum requirements.	5
(3)	Structured parking is utilized to reduce the footprint of surface parking areas.	
	(a) 25 percent to less than 50 percent	3
	(b) 50 percent to 75 percent	5

GREEN BUILDING PRACTICES		POINTS
(c) greater than 75 percent		8
(4) Vegetative paving systems are utilized to reduce the footprint of surface driveways, fire lanes, streets or parking areas.		
(a) 10 % to less than 25%		4 2
(b) 25% to 75%		2 4
(c) greater than 75%		3 6

405.2 Street widths.																
(1) Street pavement widths are minimized per local code and are in accordance with Table 405.2.		6														
<p>Table 405.2 Maximum Street Widths</p> <table border="1"> <thead> <tr> <th>Facility Type</th> <th>Maximum Width</th> </tr> </thead> <tbody> <tr> <td>Collector street with parking (one side only)</td> <td>31 feet</td> </tr> <tr> <td>Collector street without parking</td> <td>26 feet</td> </tr> <tr> <td>Local access with parking (one side only)</td> <td>27 feet</td> </tr> <tr> <td>Local access street without parking</td> <td>20 feet</td> </tr> <tr> <td>Queuing (one-lane) streets with parking</td> <td>24 feet</td> </tr> <tr> <td>Alleys and queuing (one-lane) streets without parking</td> <td>17 feet</td> </tr> </tbody> </table> <p>For SI: 1 foot = 304.8 mm</p>			Facility Type	Maximum Width	Collector street with parking (one side only)	31 feet	Collector street without parking	26 feet	Local access with parking (one side only)	27 feet	Local access street without parking	20 feet	Queuing (one-lane) streets with parking	24 feet	Alleys and queuing (one-lane) streets without parking	17 feet
Facility Type	Maximum Width															
Collector street with parking (one side only)	31 feet															
Collector street without parking	26 feet															
Local access with parking (one side only)	27 feet															
Local access street without parking	20 feet															
Queuing (one-lane) streets with parking	24 feet															
Alleys and queuing (one-lane) streets without parking	17 feet															
(2) A waiver was secured by the developer from the local jurisdiction to allow for construction of streets below minimum width requirement.		8														

405.3 Cluster development. Cluster development enables and encourages flexibility of design and development of land in such a manner as to preserve the natural and scenic qualities of the site by utilizing an alternative method for the layout, configuration and design of lots, buildings and structures, roads, utility lines and other infrastructure, parks, and landscaping.		10
405.4 Planning. Innovative planning techniques are implemented in accordance with the following:		
(1) Innovative planning techniques are used or developed for permissible adjustments to population density, area, height, open space, mixed-use, or other provisions for the specific purpose of open space, natural resource preservation or protection and/or mass transit usage. Other innovative planning techniques may be considered on a case-by-case basis.		10
(3) Provide common or public spaces of a minimum of 1/6 acre that are within ¼ mile walk to 80 percent of planned and existing units and entrances to non- residential buildings. Squares, parks, paseos, plazas, and similar uses qualify under this criterion.		10

405.5 Wetlands. Constructed wetlands or other natural innovative wastewater or stormwater treatment technologies are used.		8
---	--	---

GREEN BUILDING PRACTICES		POINTS
405.6 Multi-modal transportation. Multi-modal transportation access is provided in accordance with one or more of the following:		
(1)	A site is selected with a boundary within one-half mile (805 m) of pedestrian access to a mass transit system or within five miles of a mass transit station with available parking.	5
(2)	A site is selected where all lots within the site are located within one-half mile (805 m) of pedestrian access to a mass transit system.	7
(3)	A system of walkways, bikeways, street crossings, and pathways designed to promote connectivity to existing and planned community amenities are provided.	5
(a)	Create a grid of sidewalks and paths that provide a minimum level of connectivity of at least 90 bikeway or pathway intersections per square mile.	5
(b)	Create a grid of sidewalks and paths that provide a minimum level of connectivity of at least 140 bikeway or pathway intersections per square mile.	10
(4)	Dedicated bicycle parking and racks are indicated on the site plan and constructed for, multi-family buildings, and/or each developed common area.	6
(a)	Minimum of 1 bicycle parking space per 3 residential units.	2
(b)	Minimum of 1 bicycle parking space per 2 residential units.	4
(c)	Minimum of 1 bicycle parking space per 1 residential unit.	6
(5)	Bike sharing programs participate with the developer and facilities for bike sharing are planned for and constructed.	5
(6)	Car sharing programs participate with the developer and facilities for car sharing are planned for and constructed.	5
405.7 Density. The average density on a net developable area basis is:		
(1)	7 to less than 14 dwelling units per acre (per 4,047 m ²)	5
(2)	14 to less than 21 dwelling units per acre (per 4,047 m ²)	7
(3)	21 or greater dwelling units per acre (per 4,047 m ²)	10
405.8 Mixed-use development. (1) Mixed-use development is incorporated, or (2) for single-use sites 20 acres or less in size, 80% of the units should be within ½ mile walk of 5 non-residential uses and where a system of walkways, bikeways, street crossings and pathways is designed to promote connectivity to those uses.		9
405.9 Open space. A portion of the gross area of the community is set aside as open space. (Points awarded for every 10 percent of the community set aside as open space)		5
405.10 Community garden(s). A portion of the site is established as a community garden(s) for the residents of the site to provide local food production for residents or area consumers.		3

CHAPTER 5

LOT DESIGN, PREPARATION, AND DEVELOPMENT

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

500 LOT DESIGN, PREPARATION, AND DEVELOPMENT

500.0 Intent. This section applies to lot development for the eventual construction of residential buildings, multi-unit buildings, or additions thereto that contain dwelling units.

501 LOT SELECTION

501.1 Lot. A lot is selected within a site certified to this Standard or equivalent, Or the lot is selected to minimize environmental impact by one or more of the following:	15
(1) An infill lot is selected.	10
(2) An infill lot is selected that is a greyfield.	10
(3) An EPA-recognized brownfield lot is selected.	15

501.2 Multi-modal transportation. A range of multi-modal transportation choices are promoted by one or more of the following:	
(1) A lot is selected within one-half mile (805 m) of pedestrian access to a mass transit system	6
(2) A lot is selected within five miles (8,046 m) of a mass transit station with provisions for parking.	3
(3) Walkways, street crossings, and entrances designed to promote pedestrian activity are provided. New buildings are connected to existing sidewalks and areas of development.	5
(4) A lot is selected within one-half mile (805 m) of six or more community resources (e.g., recreational facilities (such as pools, tennis courts, basketball courts), parks, grocery store, post office, place of worship, community center, daycare center, bank, school, restaurant, medical/dental office, Laundromat/dry cleaner)]. No more than two each of the following use category can be counted toward the total: Recreation, Retail, Civic, and Services.	4
(5) Bicycle use is promoted by building on a lot located within a community that has rights-of-way specifically dedicated to bicycle use in the form of paved paths or bicycle lanes, or on an infill lot located within 1/2 mile of a bicycle lane designated by the jurisdiction.	5
(6) Dedicated bicycle parking and racks are indicated on the site plan and constructed for mixed-use, multi-family buildings, and/or common areas:	X-max
(a) Minimum of 1 bicycle parking space per 3 residential units	X2

GREEN BUILDING PRACTICES	POINTS
(b) Minimum of 1 bicycle parking space per 2 residential units	X 4
(c) Minimum of 1 bicycle parking space per 1 residential unit.	X 6

**502
PROJECT TEAM, MISSION STATEMENT, AND GOALS**

502.1 Project team, mission statement, and goals. A knowledgeable team is established and team member roles are identified with respect to green lot design, preparation, and development. The project’s green goals and objectives are written into a mission statement.	4
--	---

**503
LOT DESIGN**

503.0 Intent. The lot is designed to avoid detrimental environmental impacts first, to minimize any unavoidable impacts, and to mitigate for those impacts that do occur. The project is designed to minimize environmental impacts and to protect, restore, and enhance the natural features and environmental quality of the lot. (Points awarded only if the intent of the design is implemented.)	
--	--

503.1 Natural resources. Natural resources are conserved by one or more of the following:	
(1) A natural resources inventory is completed under the direction of a qualified professional.	5
(2) A plan is implemented to conserve the elements identified by the natural resource inventory as high-priority resources.	6
(3) Items listed for protection in the natural resource inventory plan are protected under the direction of a qualified professional.	4
(4) Basic training in tree or other natural resource protection is provided for the on-site supervisor.	4
(5) All tree pruning on-site is conducted by a certified arborist or other qualified professional.	3
(6) Ongoing maintenance of vegetation on the lot during construction is in accordance with TCIA A300 or locally accepted best practices.	4
(7) Where a lot adjoins a landscaped common area, a protection plan from construction activities next to the common area is implemented.	5

503.2 Slope disturbance. Slope disturbance is minimized by one or more of the following:	
(1) The use of terrain adaptive architecture.	5
(2) Hydrological/soil stability study is completed and used to guide the design of all buildings on the lot.	4
(3) All or a percentage of driveways and parking are aligned with natural topography to reduce cut and fill.	
(a) 10 percent to 25 percent	3
(b) 25 percent to 75 percent	4
(c) greater than 75 percent	6

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

(4) Long-term erosion effects are reduced through the design and implementation of terracing, retaining walls, landscaping, or restabilization techniques.	5
(5) Underground parking uses the natural slope for parking entrances.	5

503.3 Soil disturbance and erosion. Soil disturbance and erosion are minimized by one or more of the following: (also see Section 504.3)	
(1) Construction activities are scheduled such that disturbed soil that is to be left unworked for more than 21 days is stabilized within 14 days..	5
(2) At least 75% of total length of the utilities on the lot are designed to use one or more alternative means:	5
(a) tunneling instead of trenching	
(b) use of smaller (low ground pressure) equipment or geomats to spread the weight of construction equipment	
(c) shared utility trenches or easements	
(d) placement of utilities under paved surfaces instead of yards	
(3) Limits of clearing and grading are demarcated on the lot plan.	5

503.4 Stormwater Management. The stormwater management system is designed to use low impact development/green infrastructure practices to preserve, restore or mitigate changes in site hydrology due to land disturbance and the construction of impermeable surfaces through the use of one or more of the following techniques:	
(1) A site assessment is conducted and a plan prepared and implemented that identifies important existing permeable soils, natural drainage ways and other water features, e.g., depressional storage, onsite to be preserved in order to maintain site hydrology.	7
(2) A hydrologic analysis is conducted that results in the design of a stormwater management system that maintains the pre-development (stable, natural) runoff hydrology of the site through the development or redevelopment process. Ensure that post construction runoff rate, volume and duration do not exceed predevelopment rates, volume and duration.	10

GREEN BUILDING PRACTICES		POINTS
(3) Low Impact Development/Green infrastructure stormwater management practices to promote infiltration and evapotranspiration such as, but not limited to, vegetated swales, bio-retention cells, vegetated tree boxes and planters, green roofs, and permeable pavements are used to manage rainfall on the lot and prevent the off-lot discharge of runoff from all storms up to and including the volume of following storm events:	(a) 80th percentile storm event	5
	(b) 90th percentile storm event	8
	(c) 95th percentile storm event	10
	(4) Permeable materials are used for driveways, parking areas, walkways, patios, and recreational surfaces and the like according to the following percentages:	
(a) less than 25 percent	5	
(b) 25-50 percent	8	
(c) Greater than 50 percent	10	
<p>503.5 Landscape plan. A plan for the lot is developed to limit water and energy use while preserving or enhancing the natural environment.</p> <p>(Where "front" only or "rear" only plan is implemented, only half of the points (rounding down to a whole number) are awarded for Items (1)-(6))</p>		
(1) A plan is formulated to protect, restore, or enhance natural vegetation on the lot.		6
(a) 100 percent of the natural area		4
(b) 50 percent of the natural area		3
(c) 25 percent of the natural area		2
(d) 12 percent of the natural area		1
(2) Turf grass species, other vegetation, and trees that are native or regionally appropriate for local growing conditions are selected giving consideration to biodiversity and water use and specified on the lot plan. Non-invasive vegetation is selected.		7
(3) Turf grass is integrated with maintenance tolerant, non-invasive flowering herbaceous plants in an amount to achieve not less than 10% of the groundcover. Plants should typically flower at less than 6 inches in height.		3
(4) EPA WaterSense Water Budget Tool is used to determine the maximum percentage of turf areas.		2
(5) Plants with similar watering needs are grouped (hydrozoning) and shown on the lot plan.		5
(6) Summer shading by planting installed to shade a minimum of 30 percent of building walls. To conform to summer shading, the effective shade coverage (five years after planting) is the		5

GREEN BUILDING PRACTICES	POINTS
arithmetic mean of the shade coverage calculated at 10 am for eastward facing walls, noon for southward facing walls, and 3 pm for westward facing walls on the summer solstice.	
(7) Vegetative wind breaks or channels are designed to protect the lot and immediate surrounding lots as appropriate for local conditions.	5
(8) Site or community generated tree trimmings or stump grinding of regionally appropriate trees are used on the lot to provide protective mulch during construction or for landscaping.	3
(9) An integrated pest management plan is developed to minimize chemical use in pesticides and fertilizers.	4
(10) Developer has a plan for removal or containment of invasive plants from the disturbed areas of the site.	3
(11) Developer has a plan for removal or containment of invasive plants on the undisturbed areas of the site.	6
503.6 Wildlife habitat. Measures are planned to support wildlife habitat and include at least two of the following:	
(1) Plants and gardens that encourage wildlife, such as bird and butterfly gardens.	3
(2) Inclusion of a certified “backyard wildlife” program.	3
(3) The lot is adjacent to a wildlife corridor, fish and game park, or preserved areas and is designed with regard for this relationship.	3
(4) Outdoor lighting techniques are utilized with regard for wildlife.	3
503.7 Environmentally sensitive areas. The lot is in accordance with one or both of the following:	
(1) The lot does not contain any environmentally sensitive areas that are disturbed by the construction.	4
(2) On lots with environmentally sensitive areas, mitigation and/or restoration is conducted to preserve ecosystem functions lost through development and construction activities.	4
503.8 Demolition of existing building. A demolition waste management plan is developed, posted at the jobsite, and implemented to recycle and/or salvage with a goal of recycling or salvaging a minimum of 50 percent of the nonhazardous demolition waste. (One additional point awarded for every 10 percent of demolition waste recycled and/or salvaged beyond 50 percent).	
504 LOT CONSTRUCTION	
504.0 Intent. Environmental impact during construction is avoided to the extent possible; impacts that do occur are minimized and any significant impacts are mitigated.	

GREEN BUILDING PRACTICES	POINTS
<p>504.1 On-site supervision and coordination. On-site supervision and coordination is provided during on-the-lot clearing, grading, trenching, paving, and installation of utilities to ensure that specified green development practices are implemented. (also see Section 503.3)</p>	<p>4</p>
<p>504.2 Trees and vegetation. Designated trees and vegetation are preserved by one or more of the following:</p>	
<p>(1) Fencing or equivalent is installed to protect trees and other vegetation.</p>	<p>3</p>
<p>(2) Trenching, significant changes in grade, and compaction of soil and critical root zones in all “tree save” areas as shown on the lot plan are avoided.</p>	<p>5</p>
<p>(3) Damage to designated existing trees and vegetation is mitigated during construction through pruning, root pruning, fertilizing, and watering.</p>	<p>4</p>
<p>504.3 Soil disturbance and erosion implementation. On-site soil disturbance and erosion are minimized by one or more of the following in accordance with the SWPPP or applicable plan: (also see Section 503.3)</p>	
<p>(1) Sediment and erosion controls are installed on the lot and maintained in accordance with the stormwater pollution prevention plan, where required.</p>	<p>5</p>
<p>(2) Limits of clearing and grading are staked out on the lot.</p>	<p>5</p>
<p>(3) “No disturbance” zones are created using fencing or flagging to protect vegetation and sensitive areas on the lot from construction activity.</p>	<p>5</p>
<p>(4) Topsoil from either the lot or the site development is stockpiled and stabilized for later use and used to establish landscape plantings on the lot.</p>	<p>5</p>
<p>(5) Soil compaction from construction equipment is reduced by distributing the weight of the equipment over a larger area (laying lightweight geogrids, mulch, chipped wood, plywood, OSB, metal plates, or other materials capable of weight distribution in the pathway of the equipment).</p>	<p>4</p>
<p>(6) Disturbed areas on the lot that are complete or to be left unworked for 21 days or more are stabilized within 14 days using methods as recommended by the EPA or in the approved SWPPP, where required.</p>	<p>3</p>
<p>(7) Soil is improved with organic amendments or mulch.</p>	<p>3</p>
<p>(8) Utilities on the lot are installed using one or more alternative means (e.g., tunneling instead of trenching, use of smaller equipment, use of low ground pressure equipment, use of geomats, shared utility trenches or easements).</p>	<p>5</p>
<p>(9) Inspection reports of stormwater best management practices are available.</p>	<p>3</p>

505 INNOVATIVE PRACTICES

505.0 Intent. Innovative lot design, preparation, and development practices are used to enhance environmental performance. Waivers or variances from local development regulations are obtained and innovative zoning is used to implement such practices.

505.1 Driveways and parking areas. Driveways and parking areas are minimized or mitigated by one or more of the following:

GREEN BUILDING PRACTICES		POINTS
(1)	Off-street parking areas are shared or driveways are shared. Waivers or variances from local development regulations are obtained to implement such practices, if required.	5
(2)	In a multi-unit project, parking capacity does not exceed the local minimum requirements.	5
(3)	Structured parking is utilized to reduce the footprint of surface parking areas.	
(a)	25 percent to less than 50 percent	4
(b)	50 percent to 75 percent	5
(c)	greater than 75 percent	6
(4)	Vegetative paving systems are utilized to reduce the footprint of surface driveways, fire lanes, streets or parking areas.	
(a)	10 percent to less than 25 percent	1
(b)	25 percent to 75 percent	2
(c)	greater than 75 percent	3

505.2 Heat island mitigation. Heat island effect is mitigated by the following.		
(1)	Hardscape: Not less than 50 percent of the surface area of the hardscape on the lot meets one or a combination of the following methods.	5
(a)	Shading of hardscaping: Shade is provided from existing or new vegetation (within five years) or from trellises. Shade of hardscaping is to be measured on the summer solstice at noon.	
(b)	Light-colored hardscaping: Horizontal hardscaping materials are installed with a solar reflectance index (SRI) of 29 or greater. The SRI is calculated in accordance with ASTM E1980. A default SRI value of 35 for new concrete without added color pigment is permitted to be used instead of measurements.	
(c)	Permeable hardscaping: Permeable hardscaping materials are installed.	
(2)	Roofs: Not less than 75 percent of the exposed surface of the roof is vegetated. Invasive plant species are not permitted.	5

505.3 Density. The average density on the lot on a net developable area basis is:		
(1)	7 to less than 14 dwelling units per acre (per 4,047 m ²)	54
(2)	14 to less than 21 dwelling units per acre (per 4,047 m ²)	85
(3)	21 to less than 35 dwelling units per acre (per 4,047 m ²)	116
(4)	35 to less than 70 dwelling units per acre (per 4,047 m ²)	147
(5)	70 or greater dwelling units per acre (per 4,047 m ²)	178

GREEN BUILDING PRACTICES	POINTS
<p>505.4 Mixed-use development. The lot contains a mixed-use building.</p>	<p>8</p>
<p>505.5 Community garden(s). A portion of the lot is established as a community garden(s), available to residents of the lot, to provide for local food production to residents or area consumers.</p>	<p>3</p>
<p>505.6 Multi-Unit Plug-In Electric Vehicle Charging. Plug-in electric vehicle charging capability is provided for 1 percent of parking stalls. Electrical capacity in main electric panels supports Level 2 charging (208/240V-40 amp). Each stall is provided with conduit and wiring infrastructure from the electric panel to support Level 2 charging (208/240V-40 amp) service to the designated stalls, and stalls are equipped with either Level 2 charging AC grounded outlets (208/240V-40 amp) or Level 2 charging stations (240V/40A) by a third party charging station.</p>	<p>X4</p>

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 6

RESOURCE EFFICIENCY

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

601 QUALITY OF CONSTRUCTION MATERIALS AND WASTE
--

601.0 Intent. Design and construction practices that minimize the environmental impact of the building materials are incorporated, environmentally efficient building systems and materials are incorporated, and waste generated during construction is reduced.

601.1 Conditioned floor area. Finished floor area of a dwelling unit is limited. Finished floor area is calculated in accordance with NAHBRC Z765 for single family and ANSI/BOMA Z65.4 for multi-unit buildings. Only the finished floor area for stories above grade plane is included in the calculation.

(1) less than or equal to 700 square feet (65 m ²)	14
(2) less than or equal to 1,000 square feet (93 m ²)	15 <u>12</u>
(3) less than or equal to 1,500 square feet (139 m ²)	12 <u>9</u>
(4) less than or equal to 2,000 square feet (186 m ²)	9 <u>6</u>
(5) less than or equal to 2,500 square feet (232 m ²)	6 <u>3</u>
(6) greater than 4,000 square feet (372 m ²)	Mandatory
(For every 100 square feet (9.29 m²) over 4,000 square feet (372 m²), one point is to be added to rating level points shown in Table 303, Category 7 for each rating level.)	
<i>Multi-Unit Building Note: For a multi-unit building, a weighted average of the individual unit sizes is used for this practice.</i>	

601.2 Material usage. Structural systems are designed or construction techniques are implemented that reduce and optimize material usage.	9 Max
(1) Minimum structural member or element sizes necessary for strength and stiffness in accordance with advanced framing techniques or structural design standards are selected.	3
(2) Higher-grade or higher-strength of the same materials than commonly specified for structural elements and components in the building are used and element or component sizes are reduced accordingly.	3
(3) Performance-based structural design is used to optimize lateral force-resisting systems.	3

601.3 Building dimensions and layouts. Building dimensions and layouts are designed to reduce material cuts and waste. This practice is used for a minimum of 80 percent of the following areas:	
(1) floor area	3
(2) wall area	3
(3) roof area	3

GREEN BUILDING PRACTICES	POINTS
(4) cladding or siding area	3
(5) penetrations or trim area	1
601.4 Framing and structural plans. Detailed framing or structural plans, material quantity lists and on-site cut lists for framing, structural materials, and sheathing materials are provided.	4
601.5 Prefabricated components. Precut or preassembled components, or panelized or precast assemblies are utilized for a minimum of 90 percent for the following system or building:	13 Max
(1) floor system	4
(2) wall system	4
(3) roof system	4
(4) modular construction for the entire building located above grade	13
(5) manufactured home construction for the entire building located above grade	13
601.6 Stacked stories. Stories above grade are stacked, such as in 1½-story, 2-story, or greater structures. The area of the upper story is a minimum of 50 percent of the area of the story below based on areas with a minimum ceiling height of 7 feet (2,134 mm).	8 Max
(1) first stacked story	4
(2) for each additional stacked story	2
601.7 Prefinished materials. Prefinished building materials or assemblies listed below have no additional site-applied finishing material are installed.	12 Max
(a) interior trim not requiring paint or stain	
(c) exterior trim not requiring paint or stain	
(c) window, skylight, and door assemblies not requiring paint or stain on one of the following surfaces: i. exterior surfaces ii. interior surfaces	
(d) interior wall coverings or systems, floor systems, and/or ceiling systems not requiring paint or stain or other type of finishing application	
(e) exterior wall coverings or systems, floor system, and/or ceiling systems not requiring paint or stain or other type of finishing application	
(1) 90 percent or more of the installed building materials or assemblies listed above: (Points awarded for each type of material or assembly.)	5
(2) 50 percent to less than 90 percent of the installed building material or assembly listed above: (Points awarded for each type of material or assembly.)	2
(3) 35 percent to less than 50 percent of the installed building material or assembly listed above: (Points awarded for each type of material or assembly.)	1

GREEN BUILDING PRACTICES	POINTS
<p>601.8 Foundations. A foundation system that minimizes soil disturbance, excavation quantities, and material usage, such as frost-protected shallow foundations, isolated pier and pad foundations, deep foundations, post foundations, or helical piles is selected, designed, and constructed. The foundation is used on 50 percent or more of the building footprint.</p>	3
<p>601.9 Above-grade wall systems. Above-grade wall systems that, at a minimum, provide the structural and thermal characteristics of <i>mass walls</i> and are used for a minimum of 75 percent of the gross exterior wall area of the building.</p>	4
<p> </p> <p> </p> <p> </p> <p> </p>	
<p>602 ENHANCED DURABILITY AND REDUCED MAINTENANCE</p>	
<p>602.0 Intent. Design and construction practices are implemented that enhance the durability of materials and reduce in-service maintenance.</p>	
<p>602.1 Moisture Management – Building Envelope</p>	
<p>602.1.1 Capillary breaks</p>	
<p>602.1.1.1 A capillary break and vapor retarder are installed at concrete slabs in accordance with ICC IRC Sections R506.2.2 and R506.2.3 or ICC IBC Sections 1910 and 1805.4.1.</p>	Mandatory
<p>602.1.1.2 A capillary break between the footing and the foundation wall is provided to prevent moisture migration into foundation wall.</p>	3
<p>602.1.2 Foundation waterproofing. Enhanced foundation waterproofing is installed using one or both of the following:</p>	4
<p>(1) rubberized coating, or</p>	
<p>(2) drainage mat</p>	
<p>602.1.3 Foundation drainage</p>	
<p>602.1.3.1 Where required by the ICC IRC or IBC for habitable and usable spaces below grade, exterior drain tile is installed.</p>	Mandatory
<p>602.1.3.2 Interior and exterior foundation perimeter drains are installed and sloped to discharge to daylight, dry well, or sump pit.</p>	4

GREEN BUILDING PRACTICES		POINTS
602.1.4 Crawlspace		
602.1.4.1 Vapor retarder in unconditioned vented crawlspace is in accordance with the following, as applicable. Joints of vapor retarder overlap a minimum of 6 inches (152 mm) and are taped.		
(1)	Floors. Minimum 6 mil vapor retarder installed on the crawlspace floor and extended at least 6 inches up the wall and is attached and sealed to the wall.	6
(2)	Walls. Dampproof walls are provided below finished grade.	Mandatory
602.1.4.2 Crawlspace that is built as a conditioned area is sealed to prevent outside air infiltration and provided with conditioned air at a rate not less than 0.02 cfm (.009 L/s) per square foot of horizontal area and one of the following is implemented:		
(1)	a concrete slab over 6 mil polyethylene sheeting, or other Class I vapor retarder installed in accordance with Section 408.3 or Section 506 of the International Residential Code	8
(2)	6 mil polyethylene sheeting, or other Class I vapor retarder installed in accordance with Section 408.3 or Section 506 of the International Residential Code.	Mandatory
602.1.5 Termite barrier. Continuous physical foundation termite barrier provided in accordance as follows:		
(1)	In geographic areas that have slight to moderate infestation potential in accordance with Figure 6(3) a continuous physical barrier is used.	4
(2)	In geographic areas that have moderate to heavy or very heavy infestation potential in accordance with figure 6(3), a continuous physical barrier used with no or low toxicity treatment is installed.	4
(3)	In geographic areas that have a moderate to heavy or very heavy infestation potential a low toxicity bait and kill termite treatment plan is selected and implemented.	4
602.1.6 Termite-resistant materials. In areas of termite infestation probability as defined by Figure 6(3), termite-resistant materials are used as follows:		
(1)	In areas of slight to moderate termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings within the first 2 feet (610 mm) above the top of the foundation.	2
(2)	In areas of moderate to heavy termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings within the first 3 feet (914 mm) above the top of the foundation.	4
(3)	In areas of very heavy termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings.	6
602.1.7 Moisture control measures		
602.1.7.1 Moisture control measures are in accordance with the following:		
(1)	Building materials with visible mold are not installed or are cleaned or encapsulated prior to concealment and closing.	2

GREEN BUILDING PRACTICES		POINTS
(2)	Insulation in cavities is dry in accordance with manufacturer’s instructions when enclosed (e.g., with drywall).	Mandatory 2
(3)	The moisture content of lumber is sampled to ensure it does not exceed 19 percent prior to the surface and/or cavity enclosure.	4
602.1.7.2 Moisture content of subfloor, substrate, or concrete slabs is in accordance with the appropriate industry standard for the finish flooring to be applied.		2
602.1.7.3 Building envelope assemblies are designed for moisture control based on documented hygrothermal simulation or field study analysis. Hygrothermal analysis is required to incorporate representative climatic conditions, interior conditions and include heating and cooling seasonal variation.		X4
602.1.8 Water-resistive barrier. Where required by the ICC, IRC, or IBC, a water-resistive barrier and/or drainage plane system is installed behind exterior veneer and/or siding.		Mandatory
602.1.9 Flashing. Flashing is provided as follows to minimize water entry into wall and roof assemblies and to direct water to exterior surfaces or exterior water-resistive barriers for drainage. Flashing details are provided in the construction documents and are in accordance with the fenestration manufacturer’s instructions, the flashing manufacturer’s instructions, or as detailed by a registered design professional.		
(1)	Flashing is installed at all of the following locations, as applicable:	Mandatory
	(a) around exterior fenestrations, skylights, and doors	
	(b) at roof valleys	
	(c) at all building-to-deck, -balcony, -porch, and -stair intersections	
	(d) at roof-to-wall intersections, at roof-to-chimney intersections, at wall-to-chimney intersections, and at parapets.	
	(e) at ends of and under masonry, wood, or metal copings and sills	
	(f) above projecting wood trim	
	(g) at built-in roof gutters, and	
	(h) drip edge is installed at eaves and rake edges.	
(2)	All window and door head and jamb flashing is either self-adhered flashing complying with AAMA 711-07 or liquid applied flashing installed in accordance with flashing manufacturer’s installation instructions.	2
(3)	Pan flashing is installed at sills of all exterior windows and doors.	3
(4)	Seamless, preformed kickout flashing, or prefabricated metal with soldered seams is provided at all roof-to-wall intersections. The type and thickness of the material used for roof flashing including but not limited kickout and step flashing is commensurate with the anticipated service life of the roofing material.	3
(5)	A rainscreen wall design as follows is used for exterior wall assemblies	4 Max
	(a) a system designed with minimum 1/4-inch air space exterior to the water-resistive barrier, vented to the exterior at top and bottom of the wall, and integrated with flashing details. OR	4

GREEN BUILDING PRACTICES	POINTS												
(b) a cladding material or a water-resistive barrier with enhanced drainage, meeting 75 percent drainage efficiency determined in accordance with ASTM E2273.	2												
(6) Through-wall flashing is installed at transitions between wall cladding materials or wall construction types.	2												
(7) Flashing is installed at expansion joints in stucco walls	2												
<p>602.1.10 Exterior doors. Entries at exterior door assemblies, inclusive of side lights (if any), are covered by one of the following methods to protect the building from the effects of precipitation and solar radiation. Either a storm door or a projection factor of 0.375 minimum is provided. Eastern- and western-facing entries in Climate Zones 1, 2, and 3, as determined in accordance with Figure 6(1) or Appendix C, have either a storm door or a projection factor of 1.0 minimum, unless protected from direct solar radiation by other means (e.g., screen wall, vegetation).</p> <p>(a) installing a porch roof or awning</p> <p>(b) extending the roof overhang</p> <p>(c) recessing the exterior door</p> <p>(d) Installing a storm door</p>	<p>2 per exterior door</p> <p>6 Max</p>												
<p>602.1.11 Tile backing materials. Tile backing materials installed under tiled surfaces in wet areas are in accordance with ASTM C1178, C1278, C1288, or C1325.</p>	Mandatory												
<p>602.1.12 Roof overhangs. Roof overhangs, in accordance with Table 602.1.12, are provided over a minimum of 90 percent of exterior walls to protect the building envelope.</p> <p style="text-align: center;">Table 602.1.12 Minimum Roof Overhang for One- & Two-Story Buildings</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Inches of Rainfall ⁽¹⁾</th> <th>Eave Overhang (Inches)</th> <th>Rake Overhang (Inches)</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">≤40</td> <td style="text-align: center;">12</td> <td style="text-align: center;">12</td> </tr> <tr> <td style="text-align: center;">>41 and ≤70</td> <td style="text-align: center;">18</td> <td style="text-align: center;">12</td> </tr> <tr> <td style="text-align: center;">>70</td> <td style="text-align: center;">24</td> <td style="text-align: center;">12</td> </tr> </tbody> </table> <p>(1) Annual mean total rainfall in inches is in accordance with Figure 6(2). For SI: 12 inches = 304.8 mm</p>	Inches of Rainfall ⁽¹⁾	Eave Overhang (Inches)	Rake Overhang (Inches)	≤40	12	12	>41 and ≤70	18	12	>70	24	12	4
Inches of Rainfall ⁽¹⁾	Eave Overhang (Inches)	Rake Overhang (Inches)											
≤40	12	12											
>41 and ≤70	18	12											
>70	24	12											
<p>602.1.13 Ice barrier. In areas where there has been a history of ice forming along the eaves causing a backup of water, an ice barrier is installed in accordance with the ICC IRC or IBC at roof eaves of pitched roofs and extends a minimum of 24 inches (610 mm) inside the exterior wall line of the building.</p>	Mandatory												
<p>602.1.14 Architectural features. Architectural features that increase the potential for water intrusion are avoided:</p> <p>(1) All horizontal ledgers are sloped away to provide gravity drainage as appropriate for the application.</p> <p>(2) No roof configurations that create horizontal valleys in roof design.</p> <p>(3) No recessed windows and architectural features that trap water on horizontal surfaces.</p>	<p>Mandatory</p> <p style="text-align: center;">1</p> <p style="text-align: center;">2</p> <p style="text-align: center;">2</p>												

GREEN BUILDING PRACTICES	POINTS
<p>602.2 Roof surfaces. A minimum of 90 percent of roof surfaces, not used for roof penetrations and associated equipment, on-site renewable energy systems such as photovoltaics or solar thermal energy collectors, or rooftop decks, amenities and walkways, are constructed of one or more of the following:</p>	3
<p>(1) products that are in accordance with the ENERGY STAR® cool roof certification or equivalent</p>	
<p>(2) a vegetated roof system</p>	
<p>(3) Minimum initial SRI of 78 for low-sloped roof (a slope less than 2:12) and a minimum initial SRI of 29 for a steep-sloped roof (a slope equal to or greater than 2:12). The SRI is calculated in accordance with ASTM E1980. Roof products are certified and labeled.</p>	
<p>602.3 Roof water discharge. A gutter and downspout system or splash blocks and effective grading are provided to carry water a minimum of 5 feet (1524 mm) away from perimeter foundation walls.</p>	4
<p>602.4 Finished grade.</p>	
<p>602.4.1 Finished grade at all sides of a building is sloped to provide a minimum of 6 inches (150 mm) of fall within 10 feet (3048 mm) of the edge of the building. Where lot lines, walls, slopes, or other physical barriers prohibit 6 inches (152 mm) of fall within 10 feet (3048 mm), the final grade is sloped away from the edge of the building at a minimum slope of 2 percent.</p>	Mandatory
<p>602.4.2 The final grade is sloped away from the edge of the building at a minimum slope of 5 percent.</p>	1
<p>602.4.3 Water is directed to drains or swales to ensure drainage away from the structure.</p>	1
<p>603 REUSED OR SALVAGED MATERIALS</p>	
<p>603.0 Intent. Practices that reuse or modify existing structures, salvage materials for other uses, or use salvaged materials in the building's construction are implemented.</p>	
<p>603.1 Reuse of existing building. Major elements or components of existing buildings and structures are reused, modified, or deconstructed for later use. (Points awarded for every 200 square feet (18.5 m²) of floor area.)</p>	1 12 Max
<p>603.2 Salvaged materials. Reclaimed and/or salvaged materials and components are used. The total material value and labor cost of salvaged materials is equal to or exceeds 1 percent of the total construction cost. (Points awarded per 1% of salvaged materials used based on the total construction cost.) (Materials, elements, or components awarded points under Section 603.1 shall not be awarded points under Section 603.2.)</p>	1 9 Max

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

603.3 Scrap materials. Sorting and reuse of scrap building material is facilitated (e.g., a central storage area or dedicated bins are provided).	4
--	----------

604 RECYCLED-CONTENT BUILDING MATERIALS
--

<p>604.1 Recycled content. Building materials with recycled content are used for two minor and/or two major components of the building.</p> <p style="text-align: center;">Table 604.1 Recycled Content</p> <table border="1" style="margin-left: auto; margin-right: auto; border-collapse: collapse;"> <thead> <tr> <th style="background-color: black; color: white;">Material Percentage Recycled Content</th> <th style="background-color: black; color: white;">Points For 2 Minor</th> <th style="background-color: black; color: white;">Points For 2 Major</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">25% to less than 50%</td> <td style="text-align: center;">1</td> <td style="text-align: center;">2</td> </tr> <tr> <td style="text-align: center;">50% to less than 75%</td> <td style="text-align: center;">2</td> <td style="text-align: center;">4</td> </tr> <tr> <td style="text-align: center;">more than 75%</td> <td style="text-align: center;">3</td> <td style="text-align: center;">6</td> </tr> </tbody> </table>	Material Percentage Recycled Content	Points For 2 Minor	Points For 2 Major	25% to less than 50%	1	2	50% to less than 75%	2	4	more than 75%	3	6	per Table 604.1
Material Percentage Recycled Content	Points For 2 Minor	Points For 2 Major											
25% to less than 50%	1	2											
50% to less than 75%	2	4											
more than 75%	3	6											

605 RECYCLED CONSTRUCTION WASTE
--

<p>605.0 Intent. Waste generated during construction is recycled. All waste classified as hazardous is properly handled and disposed of.</p> <p style="text-align: center;">(Points not awarded for hazardous waste removal.)</p>

<p>605.1 Construction waste management plan. A construction waste management plan is developed, posted at the jobsite, and implemented diverting, through reuse, salvage or recycling, a minimum of 50 percent (by weight) of nonhazardous construction and demolition waste from disposal. For this practice, land clearing debris is not considered construction waste. Materials used as alternative daily cover are considered construction waste and do not count toward recycling or salvaging.</p> <p>For remodeling projects or demolition of an existing facility, the waste management plan includes the recycling of 95 percent of electronic waste components (such as printed circuit boards from computers, building automation systems, HVAC, fire and security control boards) by an EPA certified E-Waste recycling facility.</p>	6
<p>Exceptions:</p>	
<p>1) Waste materials generated from land clearing, soil and sub-grade excavation and all manner of vegetative debris shall not be in the calculations.</p>	
<p>2) A recycling facility (traditional or E-Waste) offering material receipt documentation is not available within 50 miles of the jobsite.</p>	

<p>605.2 On-site recycling. On-site recycling measures following applicable regulations and codes are implemented, such as the following:</p>	7
--	----------

GREEN BUILDING PRACTICES	POINTS
<p>(a) Materials are ground or otherwise safely applied on-site as soil amendment or fill. A minimum of 50 percent (by weight) of construction and land-clearing waste is diverted from landfill.</p>	
<p>(b) Alternative compliance methods approved by the Adopting Entity.</p>	
<p>(c) Compatible untreated biomass material (lumber, posts, beams, etc.) are set aside for combustion if a solid fuel-burning appliance per Section 901.2.1(2) will be available for on-site renewable energy.</p>	

605.3 Recycled construction materials. Construction materials (e.g., wood, cardboard, metals, drywall, plastic, asphalt roofing shingles, or concrete) are recycled offsite.	6 Max
(1) a minimum of two types of materials are recycled	3
(2) for each additional recycled material type	1

606 RENEWABLE MATERIALS

606.0 Intent. Building materials derived from renewable resources are used.

606.1 Biobased products. The following biobased products are used:	8 Max
(a) certified solid wood in accordance with Section 606.2	
(b) engineered wood	
(c) bamboo	
(d) cotton	
(e) cork	
(f) straw	
(g) natural fiber products made from crops (soy-based, corn-based)	
(h) other biobased materials with a minimum of 50 percent biobased content (by weight or volume)	
(1) Two types of biobased materials are used, each for more than 0.5 percent of the project's projected building material cost.	3
(2) Two types of biobased materials are used, each for more than 1 percent of the project's projected building material cost.	6
(3) For each additional biobased material used for more than 0.5 percent of the project's projected building material cost.	1 2 Max

606.2 Wood-based products. Wood or wood-based products are certified to the requirements of one of the following recognized product programs:
(a) American Forest Foundation's <i>American Tree Farm System®</i> (ATFS)
(b) Canadian Standards Association's <i>Sustainable Forest Management System Standards</i> (CSA Z809)

GREEN BUILDING PRACTICES		POINTS
(c)	Forest Stewardship Council (FSC)	
(d)	Program for Endorsement of Forest Certification Systems (PEFC)	
(e)	Sustainable Forestry Initiative® Program (SFI)	
(f)	National Wood Flooring Association’s Responsible Procurement Program (RPP)	
(g)	other product programs mutually recognized by PEFC	
(1)	A minimum of two certified wood-based products are used for minor components of the building.	3
(2)	A minimum of two certified wood-based products are used in major components of the building.	4
606.3 Manufacturing energy. Materials manufactured using a minimum of 33 percent of the primary manufacturing process energy derived from (1) renewable sources, (2) combustible waste sources, or (3) renewable energy credits (RECs) are used for major components of the building. <p style="text-align: right;">(2 points awarded per material.)</p>		6 Max

**607
RECYCLING AND WASTE REDUCTION**

607.1 Recycling and composting. Recycling and composting by the occupant are facilitated by one or more of the following methods:		
(1)	A built-in collection space in each kitchen and an aggregation/pick-up space in a garage, covered outdoor space, or other area for recycling containers is provided.	3
(2)	Compost facility is provided on the site.	3
607.2 Food waste disposers. A minimum of one food waste disposer is installed at the primary kitchen sink.		1

**608
RESOURCE-EFFICIENT MATERIALS**

608.1 Resource-efficient materials. Products containing fewer materials are used to achieve the same end-use requirements as conventional products, including but not limited to:		9 Max 3 per each material
(1)	lighter, thinner brick with bed depth less than 3 inches and/or brick with coring of more than 25 percent	
(2)	engineered wood or engineered steel products	
(3)	roof or floor trusses	

**609
REGIONAL MATERIALS**

GREEN BUILDING PRACTICES	POINTS
<p>609.1 Regional materials. Regional materials are used for major and/or minor components of the building.</p> <p>For a component to comply with this practice, a minimum of 75% of all products in that component category must be sourced regionally, e.g., stone veneer category – 75 percent or more of the stone veneer on a project must be sources regionally.</p>	<p>10 Max 2 per each major component and 1 per each minor component</p>

610 LIFE CYCLE ASSESMENT

<p>610.1 Life cycle assessment. A life cycle assessment (LCA) tool is used to select environmentally preferable products, assemblies, or, entire building designs. Points are awarded in accordance with Section 610.1.1 or 610.1.2. Only one method of analysis or tool may be utilized. The reference service life for the building is 60 years for any life cycle analysis tool. Results of the LCA are reported in the manual required in Section 1001.1 or 1003.1(1) of this Standard in terms of the environmental impacts listed in this practice and it is stated if operating energy was included in the LCA.</p>	<p>15 Max</p>
---	----------------------

<p>610.1.1 Whole-building life cycle assessment. A whole-building LCA is performed in conformance with ASTM E-2921 using ISO14044 compliant life cycle assessment.</p>	<p>15 max</p>
<p>(1) Execute LCA at the whole building level through a comparative analysis between the final and reference building designs as set forth under Standard Practice, ASTM E-2921. The assessment criteria includes the following environmental impact categories:</p>	<p>8</p>
<p>(a) Primary energy use</p>	
<p>(b) Global warming potential</p>	
<p>(c) Acidification potential</p>	
<p>(d) Eutrophication potential</p>	
<p>(e) Ozone depletion potential</p>	
<p>(f) Smog potential</p>	
<p>(2) Execute LCA on regulated loads throughout the building operations life cycle stage. Conduct simulated energy performance analyses in accordance with Section 702.2.1 ICC IECC analysis (IECC Section 405) in establishing the comparative performance of final versus reference building designs. Primary energy use savings and global warming potential avoidance from simulation analyses results are determined using EPA NERC electricity generation and other fuels energy conversion factors and electricity generation and other fuels emission rates for the Sub-Region in which the building is located</p>	<p>5</p>
<p>(3) Execute full LCA, including use-phase, through calculation of operating energy impacts (c) – (f) using EPA NERC regional emissions factors [provide full reference to NERC document or provide factor tables].</p>	<p>2</p>

<p>610.1.2 Life cycle assessment for a product or assembly. An environmentally preferable product or assembly is selected for an application based upon the use of an LCA tool that</p>	<p>10 Max</p>
--	----------------------

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

incorporates data methods compliant with ISO 14044 or other recognized standards that compare the environmental impact of products or assemblies.													
610.1.2.1 Product LCA. A product with improved environmental impact measures compared to another product(s) intended for the same use is selected. The environmental impact measures used in the assessment are selected from the following:	per Table 610.1.2.1 10 Max												
<table style="width: 100%; border-collapse: collapse;"> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(a) Primary energy use</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(b) Global warming potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(c) Acidification potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(d) Eutrophication potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(e) Ozone depletion potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(f) Smog potential</td></tr> </table> <p style="text-align: center; margin-top: 10px;"> (Points are awarded for each product/system comparison where the selected product/system improved upon the environmental impact measures by an average of 15 percent.) </p> <p style="text-align: center; margin-top: 10px;"> Table 610.1.2.1 Product LCA </p> <table border="1" style="margin-left: auto; margin-right: auto; border-collapse: collapse; text-align: center;"> <tr> <th style="padding: 2px 10px;">4 Impact Measures</th> <th style="padding: 2px 10px;">5 Impact Measures</th> </tr> <tr style="background-color: black; color: white;"> <th colspan="2" style="padding: 2px 10px;">POINTS</th> </tr> <tr> <td style="padding: 2px 10px;">2</td> <td style="padding: 2px 10px;">3</td> </tr> </table>	(a) Primary energy use	(b) Global warming potential	(c) Acidification potential	(d) Eutrophication potential	(e) Ozone depletion potential	(f) Smog potential	4 Impact Measures	5 Impact Measures	POINTS		2	3

610.1.2.2 Building assembly LCA. A building assembly with improved environmental impact measures compared to an alternative assembly of the same function is selected. The full life cycle, from resource extraction to demolition and disposal (including but not limited to on-site construction, maintenance and replacement, material and product embodied acquisition, and process and transportation energy), is assessed. The assessment includes all structural elements, insulation, and wall coverings of the assembly. The assessment does not include electrical and mechanical equipment and controls, plumbing products, fire detection and alarm systems, elevators, and conveying systems. The following types of building assemblies are eligible for points under this practice:	per Table 610.1.2.2 10 Max										
<table style="width: 100%; border-collapse: collapse;"> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(a) exterior walls</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(b) roof/ceiling</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(c) interior walls or ceilings</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(d) intermediate floors</td></tr> </table> <p style="margin-top: 10px;">The environmental impact measures used in the assessment are selected from the following:</p> <table style="width: 100%; border-collapse: collapse;"> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(a) Primary energy use</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(b) Global warming potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(c) Acidification potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(d) Eutrophication potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(e) Ozone depletion potential</td></tr> <tr><td style="border-bottom: 1px solid black; padding: 2px 5px;">(f) Smog potential</td></tr> </table> <p style="text-align: center; margin-top: 10px;"> (Points are awarded based on the number of types of building assemblies that improve upon environmental impact measures by an average of 15 percent.) </p> <p style="text-align: center; margin-top: 10px;"> Table 610.1.2.2 Building Assembly LCA </p>	(a) exterior walls	(b) roof/ceiling	(c) interior walls or ceilings	(d) intermediate floors	(a) Primary energy use	(b) Global warming potential	(c) Acidification potential	(d) Eutrophication potential	(e) Ozone depletion potential	(f) Smog potential

611 INNOVATIVE PRACTICES

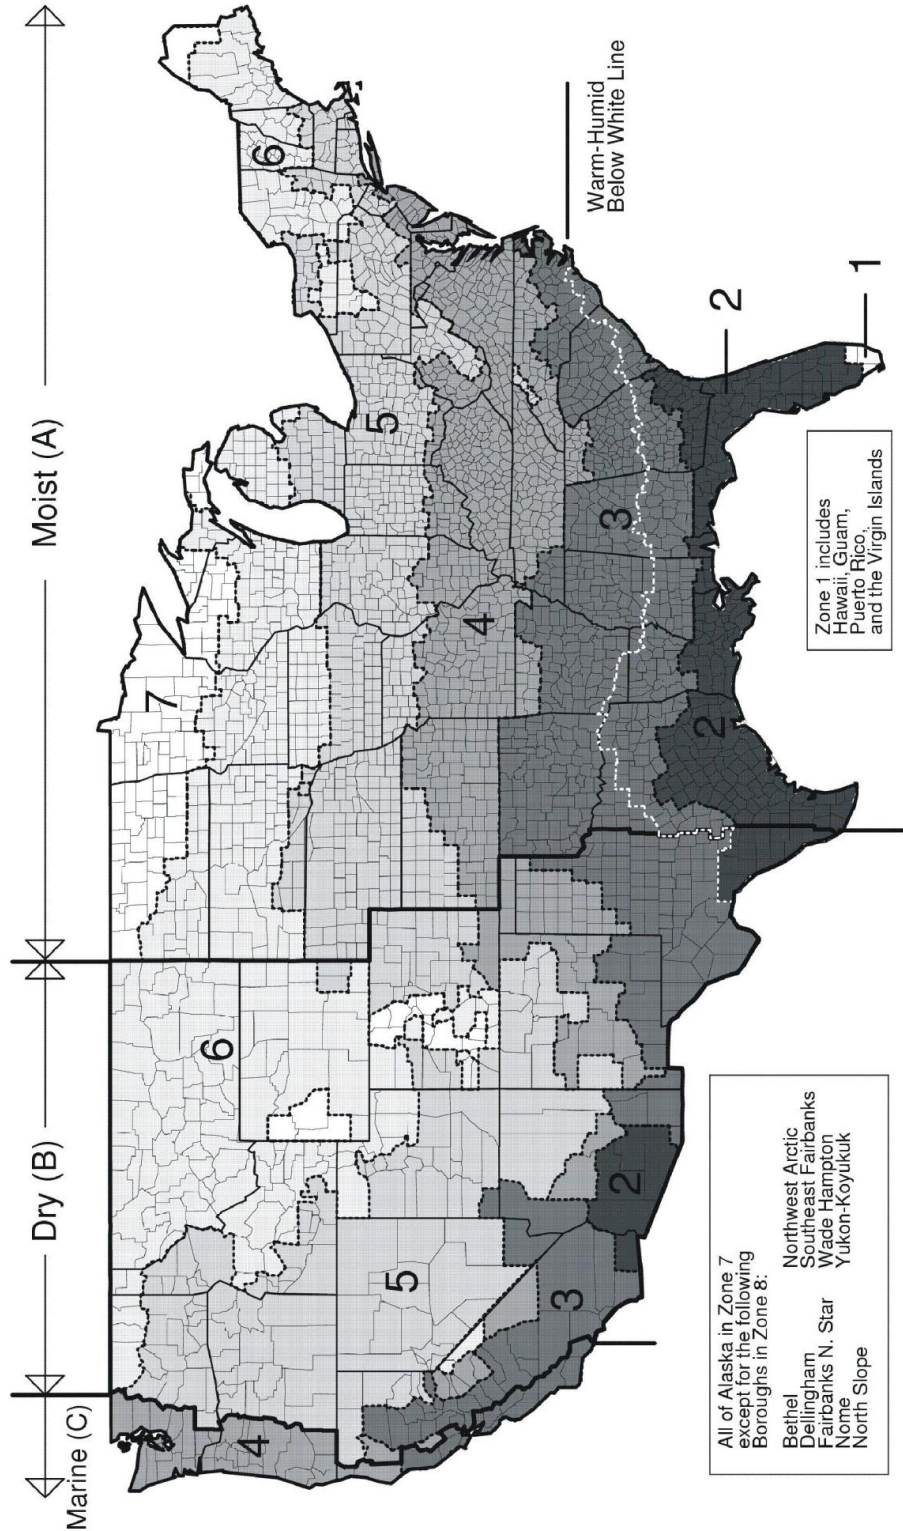

<p>611.1 Manufacturer’s environmental management system concepts. Product manufacturer’s operations and business practices include environmental management system concepts, and the production facility is registered to ISO 14001 or equivalent. The aggregate value of building products from registered ISO 14001 or equivalent production facilities is 1 percent or more of the estimated total building materials cost.</p> <p style="text-align: right;">(1 point awarded per percent.)</p>	10 Max
---	---------------

<p>611.2 Sustainable products. One or more of the following products are used for at least 30% of the floor or wall area of the entire dwelling unit, as applicable. Products are certified by a third-party agency accredited to ISO Guide 65.</p>	9 Max
<p>(1) 50% or more of carpet installed (by square feet) is certified to NSF 140.</p>	3
<p>(2) 50% or more of resilient flooring installed (by square feet) is certified to NSF 332.</p>	3
<p>(3) 50% or more of the insulation installed (by square feet) is certified to EcoLogo CCD-016.</p>	3
<p>(4) 50% or more of interior wall coverings installed (by square feet) is certified to NSF 342.</p>	3
<p>(5) 50% or more of the gypsum board installed (by square feet) is certified to UL 100.</p>	3
<p>(6) 50% or more of the door leafs installed (by number of door leafs) is certified to UL 102.</p>	3
<p>(7) 50% or more of the tile installed (by square feet) is certified to TCNA A138.1 Specifications for Sustainable Ceramic Tiles, Glass Tiles and Tile Installation Materials.</p>	3

<p>611.3 Universal design elements. Dwelling incorporates one or more of the following universal design elements. Conventional industry construction tolerances are permitted.</p>	10 12 Max
<p>(1) Any no-step entrance into the dwelling which (1) is accessible from a substantially level parking or drop-off area (no more than 2%) via an accessible path which has no individual change in elevation or other obstruction of more than 1-1/2 inches in height with the pitch not exceeding 1 in 12 and (2) provides a minimum 32-inch wide clearance into the dwelling.</p>	3
<p>(2) Minimum 36-inch wide accessible route from the no-step entrance into at least one visiting room in the dwelling and into at least one full or half bathroom which has a minimum 32-inch clear door width and a 30-inch by 48-inch clear area inside the bathroom outside the door swing.</p>	3
<p>(3) Minimum 36-inch wide accessible route from the no-step entrance into at least one bedroom which has a minimum 32-inch clear door width.</p>	3
<p>(4) Blocking or equivalent installed in the accessible bathroom walls for future installation of grab bars at water closet and bathing fixture, if applicable.</p>	1
<p>(5) All interior and exterior door handles are levers rather than knobs.</p>	TBD₁
<p>(6) All sink faucet controls are single-handle controls of both volume and temperature.</p>	TBD₁

RESOURCE EFFICIENCY

GREEN BUILDING PRACTICES	POINTS
<p>(7) Interior convenience Power receptacles, communication connections (for cable, phone, Ethernet, etc.) and switches are placed between 15” and 48” above the finished floor. Additional switches to control devices and systems (such as alarms, home theaters and other equipment) not required by the local building code may be installed as desired.</p>	<p>TBD₁</p>
<p>(8) All light switches are rocker-type switches or other similar switches that can be operated by pressing them (with assistive devices). Toggle-type switches may not be used.</p>	<p>TBD₁</p>
<p>(9) Any of the following can be controlled with a (wireless) mobile device such as a smartphone, tablet or laptop computer: HVAC, lighting, alarm system or door locks</p>	<p>TBD₁</p>
<p>611.4 Product declarations. A minimum of 10 different products installed in the building project, at the time of certificate of occupancy, comply with one of the following sub-sections. Declarations, reports, and assessments are submitted to the Adopting Entity and contain documentation of the critical peer review by an independent third party, results from the review, the reviewer’s name, company name, contact information, and date of the review.</p>	<p>5</p>
<p>611.4.1 Industry-wide declaration. A Type III industry-wide environmental product declaration (EPD) is submitted for each product. Where the program operator explicitly recognizes the EPD as representative of the product group on a National level, it is considered industry-wide. In the case where an industry-wide EPD represents only a subset of an industry group, as opposed to being industry-wide, the manufacturer is required be explicitly recognized as a participant by the EPD program operator. All EPDs are required to be consistent with ISO Standards 14025 and 21930 with at least a cradle-to-gate scope. (Each product complying with Section 611.4.1 shall be counted as one product for compliance with Section 611.4.)</p>	
<p>611.4.2 Product Specific Declaration. A product specific Type III EPD are submitted for each product. The product specific declaration shall be manufacturer specific for an individual product or product family. All Type III EPDs are required to be certified as complying, at a minimum, with the goal and scope for the cradle-to-gate requirements in accordance with ISO Standards 14025 and 21930. (Each product complying with Section 611.4.2 shall be counted as two products for compliance with Section 611.4.)</p>

CHAPTER 7

ENERGY EFFICIENCY

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

**701
MINIMUM ENERGY EFFICIENCY REQUIREMENTS**

TG Action: To revise threshold points in Table 303 based on the changes to the baseline and point revisions to individual practices (unanimous 12-0-0)

Table 303

<u>3.</u>	<u>Chapter 7</u>	<u>Energy Efficiency</u>	<u>30</u>	<u>6045</u>	<u>8060</u>	<u>10070</u>
-----------	------------------	--------------------------	-----------	-------------	-------------	--------------

701.1 Mandatory requirements. The building shall comply with Section 702 (Performance Path), Section 703 (Prescriptive Path), or Section 704 (HERS Index Target Path). Items listed as “mandatory” in Section 701.4 apply to all Paths.

701.1.1 Minimum Performance Path requirements. A building complying with Section 702 shall include a minimum of two practices from Section 705.

701.1.2 Minimum Prescriptive Path requirements. A building complying with Section 703 shall obtain a minimum of 30 points from Section 703 and shall include a minimum of two practices from Section 705.

701.1.3 HERS Index Target Path requirements. A building complying with Section 704 shall obtain a minimum of 30 points from Section 704 and shall include a minimum of two practices from Section 705.

701.1.4 Alternative bronze and silver level compliance. As an alternative, any building that qualifies as an ENERGY STAR Version 3.0 Certified Home or ENERGY STAR Multifamily High Rise Version 1.0 Rev. 02 building achieves the bronze level for Chapter 7. As an alternative, any building that qualifies as an ENERGY STAR Version 3.1 Certified Home or ENERGY STAR Multifamily High Rise Version 1.0 Rev. 02 (with the baseline at ASHRAE 90.1-2010) building achieves the silver level for Chapter 7. The buildings achieving compliance under Section 701.1.4 are not eligible for achieving a rating level above silver.

701.2 Emerald level points. The Performance Path shall be used to achieve the emerald level.

701.3 Adopting Entity review. A review by the Adopting Entity or designated third party shall be conducted to verify design and compliance with Chapter 7.

GREEN BUILDING PRACTICES	POINTS
701.4 Mandatory practices.	
701.4.1 HVAC systems.	
701.4.1.1 HVAC system sizing. Space heating and cooling system is sized according to heating and cooling loads calculated using ACCA Manual J, or equivalent. Equipment is selected using ACCA Manual S or equivalent.	Mandatory
701.4.1.2 Radiant and hydronic space heating. Where installed as a primary heat source in the building, radiant or hydronic space heating system is designed, installed, and documented, using industry-approved guidelines and standards (e.g., ACCA Manual J, AHRI I=B=R, ACCA 5 QI-2010, or an accredited design professional's and manufacturer's recommendations).	Mandatory
701.4.2 Duct systems.	
701.4.2.1 Duct air sealing. Ducts are air sealed. All duct sealing materials are in conformance with UL 181A or UL 181B specifications and are installed in accordance with manufacturer's instructions.	Mandatory
701.4.2.2 Ducts and Plenums. Building framing cavities are not used as ducts or plenums.	Mandatory
701.4.2.3 Duct system sizing. Duct system is sized and designed in accordance with ACCA Manual D or equivalent.	Mandatory
701.4.3 Insulation and air sealing.	
701.4.3.1 Building Thermal Envelope Air Sealing. The building thermal envelope is durably sealed to limit infiltration. The sealing methods between dissimilar materials allow for differential expansion and contraction. The following are caulked, gasketed, weather-stripped or otherwise sealed with an air barrier material, suitable film, or solid material:	Mandatory
(a) All joints, seams and penetrations.	
(b) Site-built windows, doors, and skylights.	
(c) Openings between window and door assemblies and their respective jambs and framing.	
(d) Utility penetrations.	
(e) Dropped ceilings or chases adjacent to the thermal envelope.	
(f) Knee walls.	
(g) Walls and ceilings separating a garage from conditioned spaces.	
(h) Behind tubs and showers on exterior walls.	
(i) Common walls between dwelling units.	
(j) Attic access openings.	
(k) Rim joist junction.	

GREEN BUILDING PRACTICES	POINTS
(l) Other sources of infiltration.	
<p>701.4.3.2 Air sealing and insulation. Grade II and III insulation installation is not permitted. Building envelope air tightness and insulation installation is verified to be in accordance with Section 701.4.3.2(1) and 701.4.3.2(2).</p>	Mandatory
<p>(1) Testing. Building envelope tightness is tested. Testing is conducted in accordance with ASTM E-779 using a blower door at a test pressure of 33.5<u>1.04</u> psf (50 Pa). Testing is conducted after rough-in and after installation of penetrations of the building envelope, including penetrations for utilities, plumbing, electrical, ventilation, and combustion appliances. Testing is conducted under the following conditions:</p> <p>(a) Exterior windows and doors, fireplace and stove doors are closed, but not sealed;</p> <p>(b) Dampers are closed, but not sealed, including exhaust, intake, makeup air, backdraft and flue dampers;</p> <p>(c) Interior doors are open;</p> <p>(d) Exterior openings for continuous ventilation systems and heat recovery ventilators are closed and sealed;</p> <p>(e) Heating and cooling systems are turned off;</p> <p>(f) HVAC duct terminations are not sealed; and</p> <p>(g) Supply and return registers are not sealed.</p>	
<p><u>Multi-Unit Building Note:</u> <i>Testing by dwelling units, groups of dwelling units, or the building as a whole is acceptable.</i></p>	
<p>(2) Visual inspection. The air barrier and insulation items listed in Table 701.4.3.2(2) are field verified by visual inspection.</p>	

GREEN BUILDING PRACTICES

POINTS

Table 701.4.3.2(2)
Air Barrier and Insulation Installation

COMPONENT	AIR BARRIER CRITERIA	INSULATION INSTALLATION CRITERIA
General requirements	A continuous air barrier shall be installed in the building envelope. The exterior thermal envelope contains a continuous air barrier. Breaks or joints in the air barrier shall be sealed.	Air-permeable insulation shall not be used as a sealing material.
Ceiling/attic	The air barrier in any dropped ceiling/soffit shall be aligned with the insulation and any gaps in the air barrier shall be sealed. Access openings, drop down stairs or knee wall doors to unconditioned attic spaces shall be sealed.	The insulation in any dropped ceiling/soffit shall be aligned with the air barrier.
Walls	The junction of the foundation and sill plate shall be sealed. The junction of the top plate and the top of exterior walls shall be sealed. Knee walls shall be sealed.	Cavities within corners and headers of frame walls shall be insulated by completely filling the cavity with a material having a thermal resistance of R-3 per inch minimum. Exterior thermal envelope insulation for framed walls shall be installed in substantial contact and continuous alignment with the air barrier.
Windows, skylights and doors	The space between window/door jambs and framing, and skylights and framing shall be sealed.	
Rim joists	Rim joists shall include the air barrier.	Rim joists shall be insulated.
Floors (including above garage and cantilevered floors)	The air barrier shall be installed at any exposed edge of insulation.	Floor framing cavity insulation shall be installed to maintain permanent contact with the underside of subfloor decking, or floor framing cavity insulation shall be permitted to be in contact with the top side of sheathing, or continuous insulation installed on the underside of floor framing and extends from the bottom to the top of all perimeter floor framing members.
Crawl space walls	Exposed earth in unvented crawl spaces shall be covered with a Class I vapor retarder with overlapping joints taped.	Where provided instead of floor insulation, insulation shall be permanently attached to the crawlspace walls.
Shafts, penetrations	Duct shafts, utility penetrations, and flue shafts opening to exterior or unconditioned space shall be sealed.	
Narrow cavities		Batts in narrow cavities shall be cut to fit, or narrow cavities shall be filled by insulation that on installation readily conforms to the available cavity space.
Garage separation	Air sealing shall be provided between the garage and conditioned spaces.	
Recessed lighting	Recessed light fixtures installed in the building thermal envelope shall be sealed to the drywall.	Recessed light fixtures installed in the building thermal envelope shall be air tight and IC rated.
Plumbing and wiring		Batt insulation shall be cut neatly to fit around wiring and plumbing in exterior walls, or insulation that on installation readily conforms to available space shall extend behind piping and wiring.
Shower/tub on exterior wall	The air barrier installed at exterior walls adjacent to showers and tubs shall separate them from the showers and tubs.	Exterior walls adjacent to showers and tubs shall be insulated.
Electrical/phone box on exterior walls	The air barrier shall be installed behind electrical or communication boxes or air-sealed boxes shall be installed.	
HVAC register boots	HVAC register boots that penetrate building thermal envelope shall be sealed to the subfloor or drywall.	
Concealed sprinklers	When required to be sealed, concealed fire sprinklers shall only be sealed in a manner that is recommended by the manufacturer. Caulking or other adhesive sealants shall not be used to fill voids between fire sprinkler cover plates and walls or ceilings.	

a. In addition, inspection of log walls shall be in accordance with the provisions of ICC-400.

GREEN BUILDING PRACTICES	POINTS
<p>7013.24.3.2.1 Grade I insulation installations are in accordance with the following:</p> <ol style="list-style-type: none"> <u>(1) Grading applies to field-installed insulation products.</u> <u>(2) Grading applies to ceilings, walls, floors, band joists, rim joists, conditioned attics, basements and crawlspaces, except as specifically noted.</u> <u>(3) Inspection is conducted before insulation is covered.</u> <u>(4) Air-permeable insulation is enclosed on all six sides and is in substantial contact with the sheathing material on one or more sides (interior or exterior) of the cavity. Air permeable insulation in ceilings is not required to be enclosed when the insulation is installed in substantial contact with the surfaces it is intended to insulate.</u> <u>(5) Cavity insulation uniformly fills each cavity side-to-side and top-to-bottom, without substantial gaps or voids around obstructions (such as blocking or bridging).</u> <u>(6) Cavity insulation compression or incomplete fill amounts to 2 percent or less, presuming the compressed or incomplete areas are a minimum of 70 percent of the intended fill thickness; occasional small gaps are acceptable.</u> <u>(7) Exterior rigid insulation has substantial contact with the structural framing members or sheathing materials and is tightly fitted at joints.</u> <u>(8) Cavity insulation is split, installed, and/or fitted tightly around wiring and other services.</u> <u>(9) Exterior sheathing is not visible from the interior through gaps in the cavity insulation.</u> <u>(10) Faced batt insulation is permitted to have side-stapled tabs, provided the tabs are stapled neatly with no buckling, and provided the batt is compressed only at the edges of each cavity, to the depth of the tab itself.</u> <u>(11) Where properly installed, ICFs, SIPs, and other wall systems that provide integral insulation are deemed in compliance with the Grade 1 insulation installation requirements.</u> 	
<p>701.4.3.3 Multi-unit air leakage alternative. Multi-unit buildings in compliance with IECC section C402.5 (Air leakage-thermal envelope) <u>are</u> deemed to comply with Sections 701.4.3.1 and 701.4.3.2.</p>	
<p>701.4.3.4 Fenestration air leakage. Windows, skylights and sliding glass doors have an air infiltration rate of no more than 0.3 cfm per square foot (1.5 L/s/m²), and swinging doors no more than 0.5 cfm per square foot (2.6 L/s/m²), when tested in accordance with NFRC 400 or AAMA/WDMA/CSA 101/I.S.2/A440 by an accredited, independent laboratory and listed and labeled. This practice does not apply to site-built windows, skylights, and doors.</p>	Mandatory
<p>701.4.3.5 Recessed lighting. Recessed luminaires installed in the building thermal envelope are sealed to limit air leakage between conditioned and unconditioned spaces. All recessed luminaires are IC-rated and labeled as meeting ASTM E283 when tested at 1.57 psf (75 Pa) pressure differential with no more than 2.0 cfm (0.944 L/s) of air movement from the conditioned</p>	Mandatory

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

space to the ceiling cavity. All recessed luminaires are sealed with a gasket or caulk between the housing and the interior of the wall or ceiling covering.	
--	--

701.4.4 High-efficacy lighting. Lighting efficacy is in accordance with one of the following:		Mandatory
(1)	A minimum of 75 percent of the total hard-wired lighting fixtures or the bulbs in those fixtures qualify as high efficacy or equivalent	X
(2)	Lighting power density, measured in watts/square foot, is 1.1 or less.	X

701.4.5 Boiler supply piping. Boiler supply piping in unconditioned space is insulated.	Mandatory
--	------------------

702 PERFORMANCE PATH

702.1 Point allocation. Points from Section 702 (Performance Path) shall not be combined with points from Section 703 (Prescriptive Path) or Section 704 (HERS Index Target Path).	Mandatory
---	------------------

702.2 Energy performance levels.

702.2.1 ICC IECC analysis. Energy efficiency features are implemented to achieve energy cost or source energy performance that meets the ICC IECC. A documented analysis using software in accordance with ICC IECC, Section R405, or ICC IECC Section C407.2 through C407.5, applied as defined in the ICC IECC, is required.	Mandatory
---	------------------

702.2.2 Energy performance analysis. Energy savings levels above the ICC IECC are determined through an analysis that includes improvements in building envelope, air infiltration, heating system efficiencies, cooling system efficiencies, duct sealing, water heating system efficiencies, lighting, and appliances. Points are assigned using the following formula: Points = 30 + (percent above ICC IECC 2015) * 2	
Multi-Unit Building Note: Modeling is completed building-wide using one of the following methods: whole building energy modeling, a unit-by-unit approach, or a building average of a unit-by-unit approach.	

702.2.3 Tropical standard reference design. For the Tropical Climate Zone, the standard reference design shall use the specifications in IECC Section R401.2.1 (Tropical Zone).	
--	--

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

703 PRESCRIPTIVE PATH

703.1 Mandatory practices.

30

703.1.1 UA Compliance. The building is in compliance with Section 703.1.1.1 or 703.1.1.2.

**Mandatory
for Section
703**

Exception: Section 703.1.1 is not required for Tropical Climate Zone.

703.1.1.1 Maximum UA. For IECC residential, the total building UA is less than or equal to the total maximum UA as computed by 2015 IECC Section R402.1.5. For IECC commercial, the total UA is less than or equal to the sum of the UA for 2015 IECC Tables C402.1.4 and C402.4, including the U-factor times the area and C-factor or F-factor times the perimeter. The total UA proposed and baseline calculations are documented. REScheck or COMcheck is deemed to provide UA calculation documentation.

703.1.1.2 Prescriptive R-values and Fenestration Requirements. The building is in accordance with the insulation and fenestration requirements of 2015 IECC Table R402.1.1 or Tables C402.1.3 and C402.4. The SHGC is in accordance with the 2015 IECC requirements.

703.1.2 Building Envelope Leakage. The building thermal envelope is in accordance with 2015 IECC R402.4.1.2 or C402.5 as applicable.

**Mandatory
for Section
703**

Exception: Section 703.1.2 is not required for Tropical Climate Zone.

703.1.3 Duct Testing. The duct system is in accordance with 2015 IECC R403.3.2 through R403.3.5 as applicable.

**Mandatory
for Section
703**

703.2 Building envelope

703.2.1 UA improvement. The total building thermal envelope UA is less than or equal to the total UA resulting from the U-factors provided in Table 703.2.1(a) or IECC Tables C402.1.4 and C402.4, as applicable. Where insulation is used to achieve the UA improvement, the insulation installation is in accordance with Grade 1 requirements as graded by a third-party. Total UA is documented using a REScheck, COMcheck, or equivalent report to verify the baseline and the UA improvement.

**Per Table
703.2.1(b)**

**Table 703.2.1(a)
Equivalent U-Factors^a**

Climate Zone	Fenestration U-Factor	Skylight U-Factor	Ceiling U-Factor	Frame Wall U-Factor	Mass Wall U-Factor ^b	Floor U-Factor	Basement Wall U-Factor	Crawlspace Wall U-Factor ^c
1	0.50	0.75	0.035	0.084	0.197	0.064	0.360	0.477
2	0.40	0.65	0.030	0.084	0.165	0.064	0.360	0.477
3	0.35	0.55	0.030	0.060	0.098	0.047	0.091 ^c	0.136
4 except Marine	0.35	0.55	0.026	0.060	0.098	0.047	0.059	0.065
5 and Marine 4	0.32	0.55	0.026	0.060	0.082	0.033	0.050	0.055

GREEN BUILDING PRACTICES	POINTS
---------------------------------	---------------

6	0.32	0.55	0.026	0.045	0.060	0.033	0.050	0.055
7 and 8	0.32	0.55	0.026	0.045	0.057	0.028	0.050	0.055

a. Non-fenestration U-factors shall be obtained from measurement, calculation, or an approved source.
 b. Where more the half the insulation is on the interior, the mass wall U-factors is a maximum of 0.17 in Zone 1, 0.14 in Zone 2, 0.12 in Zone 3, 0.10 in Zone 4 except in Marine, and the same as the frame wall U-factor in Marine Zone 4 and Zones 5 through 8.
 c. Basement wall U-factor of 0.360 in warm-humid locations.

Table 703.2.1(b)
Points for Improvement in Total Building Thermal Envelope UA

Minimum UA Improvement	Climate Zone

≥2035%	211	1421	1718	1822	1820	1721	1419	1623

Note: For Tropical Climate Zone, points are Climate Zone 1 points divided by 2 and rounded down (*Staff Note: the change will be integrated into the table in the next version of the document*).

Per Table 703.12.2

Exception: for Tropical Climate Zone, crawl space, basement, floor u-factors are not applicable

~~**703.12.2 Insulation installation.** The insulation installation is graded by a third party and is in accordance with Sections 703.12.2.1, 703.12.2.2, and/or 703.12.2.3 as applicable. Grade 3 insulation installation is not permitted. Grade 2 installation is permitted only for bronze level buildings.~~

(Points not awarded in this section if already awarded under Section 703.12.1.)

Table 703.12.2
Insulation Installation Grades

Grade	POINTS
1	70
2	40

~~**703.2.2.1** Grade 1 insulation installations are in accordance with the following:~~

- ~~(1) Grading applies to field installed insulation products.~~
- ~~(2) Grading applies to ceilings, walls, floors, band joists, rim joists, conditioned attics, basements and crawlspaces, except as specifically noted.~~
- ~~(3) Inspection is conducted before insulation is covered.~~

GREEN BUILDING PRACTICES	POINTS
(4) Air permeable insulation is enclosed on all six sides and is in substantial contact with the sheathing material on one or more sides (interior or exterior) of the cavity. Air permeable insulation in ceilings is not required to be enclosed when the insulation is installed in substantial contact with the surfaces it is intended to insulate.	
(5) Cavity insulation uniformly fills each cavity side to side and top to bottom, without substantial gaps or voids around obstructions (such as blocking or bridging).	
(6) Cavity insulation compression or incomplete fill amounts to 2 percent or less, presuming the compressed or incomplete areas are a minimum of 70 percent of the intended fill thickness; occasional small gaps are acceptable.	
(7) Exterior rigid insulation has substantial contact with the structural framing members or sheathing materials and is tightly fitted at joints.	
(8) Cavity insulation is split, installed, and/or fitted tightly around wiring and other services.	
(9) Exterior sheathing is not visible from the interior through gaps in the cavity insulation.	
(10) Faced batt insulation is permitted to have side-stapled tabs, provided the tabs are stapled neatly with no buckling, and provided the batt is compressed only at the edges of each cavity, to the depth of the tab itself.	
(11) Where properly installed, ICFs, SIPs, and other wall systems that provide integral insulation are deemed in compliance with the Grade 1 insulation installation requirements.	

703.2.3 Mass walls. More than 75 percent of the above-grade exterior opaque wall area of the building is mass walls.	Per Table 703.2.3																								
<p>Table 703.2.3 Exterior Mass Walls</p> <table border="1"> <thead> <tr> <th rowspan="2">Mass thickness</th> <th colspan="4">Climate Zone</th> </tr> <tr> <th>1-4</th> <th>5</th> <th>6</th> <th>7-8</th> </tr> <tr> <th colspan="5" style="text-align: center;">POINTS</th> </tr> </thead> <tbody> <tr> <td>≥3 inch to <6 inch</td> <td style="text-align: center;">51</td> <td style="text-align: center;">40</td> <td style="text-align: center;">30</td> <td style="text-align: center;">0</td> </tr> <tr> <td>>6 inch</td> <td style="text-align: center;">33</td> <td style="text-align: center;">22</td> <td style="text-align: center;">22</td> <td style="text-align: center;">0</td> </tr> </tbody> </table>		Mass thickness	Climate Zone				1-4	5	6	7-8	POINTS					≥3 inch to <6 inch	51	40	30	0	>6 inch	33	22	22	0

703.2.6 Fenestration

703.2.6.1 NFRC-certified (or equivalent) U-factor and SHGC of windows, exterior doors, skylights, and tubular daylighting devices (TDDs) on an area-weighted average basis do not exceed the values in Table 703.2.6.1. Area weighted averages are calculated separately for the categories of 1) windows and exterior doors and 2) skylights and tubular daylighting devices (TDDs). Decorative fenestration elements with a combined total maximum area of 15 square feet (1.39 m²) or 10 percent of the total glazing area, whichever is less, are not required to comply with this practice.

Mandatory

703.2.6.1.1 Dynamic glazing. Dynamic glazing is permitted to satisfy the SHGC requirements of Table 703.2.6.1 provided the ratio of the higher to lower labeled SHGC is greater than or equal to 2.4 and the dynamic glazing is automatically controlled to modulate the amount of solar gain into the space in multiple steps. Fenestration with dynamic glazing is considered separately from other fenestration and area-weighted averaging with fenestration that does not use dynamic glazing is not permitted. Dynamic glazing is not required to be automatically controlled or comply with minimum SHGC ratio when both the lower and higher labeled SHGC already comply with the requirements of Table 703.2.6.1.

**Table 703.2.6.1
Fenestration Specifications**

Climate Zones	U-Factor	SHGC
	Windows and Exterior Doors (maximum certified ratings)	
1	0.50	0.25
2	0.40	0.25

703.3 HVAC equipment efficiency

703.3.0 Multiple heating and cooling systems. For multiple heating or cooling systems in one home, practices 703.3.1 through 703.3.6 apply to the system that supplies 80% or more of the total installed heating or cooling capacity. Where multiple systems each serve less than 80% of the total installed heating or cooling capacity, points under Sections 703.3.1 through 703.3.6 are awarded only for the system eligible for the fewest points.

703.3.1 Combination space heating and water heating system (combo system) is installed using either a coil from the water heater connected to an air handler to provide heat for the building or dwelling unit, or a space heating boiler using an indirect-fired water heater. Devices have a combined annual efficiency of 0.80.	4
---	----------

703.3.2 Furnace and/or boiler efficiency is in accordance with one of the following:

(1) Gas and propane heaters:	Per Table 703.3.2(1)

(2) Dishwasher										1																																
(3) Washing machine										4																																

703.6.4 Induction cooktop. Induction cooktop is installed.	4
--	---------------------

703.7 Passive solar design

703.7.1 Sun-tempered design. Building orientation, sizing of glazing, and design of overhangs are in accordance with all of the following:											54
(1) The long side (or one side if of equal length) of the building faces within 20 degrees of true south.											
(2) Vertical glazing area is between 5 and 7 percent of the gross conditioned floor area on the south face [also see Section 703.6.1(8)].											
(3) Vertical glazing area is less than 2 percent of the gross conditioned floor area on the west face, and glazing is ENERGY STAR compliant or equivalent.											
(4) Vertical glazing area is less than 4 percent of the gross conditioned floor area on the east face, and glazing is ENERGY STAR compliant or equivalent.											
(5) Vertical glazing area is less than 8 percent of the gross conditioned floor area on the north face, and glazing is ENERGY STAR compliant or equivalent.											
(6) Skylights, where installed, are in accordance with the following:											
(a) shades and insulated wells are used, and all glazing is ENERGY STAR compliant or equivalent											
(b) horizontal skylights are less than 0.5 percent of finished ceiling area											

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

(c) sloped skylights on slopes facing within 45 degrees of true south, east, or west are less than 1.5 percent of the finished ceiling area

(7) Overhangs or adjustable canopies or awnings or trellises provide shading on south-facing glass for the appropriate climate zone in accordance with Table 703.6.1(7):

**Table 703.7.1(7)
South-Facing Window Overhang Depth**

		Vertical distance between bottom of overhang and top of window sill				
		≤7' 4"	≤6' 4"	≤5' 4"	≤4' 4"	≤3' 4"
Climate Zone	1 & 2 & 3	2' 8"	2' 8"	2' 4"	2' 0"	2' 0"
	4 & 5 & 6	2' 4"	2' 4"	2' 0"	2' 0"	1' 8"
	7 & 8	2' 0"	1' 8"	1' 8"	1' 4"	1' 0"

For SI: 1 inch = 25.4 mm

(8) The south face windows have a SHGC of 0.40 or higher.

(9) Return air or transfer grilles/ducts are in accordance with Section 705.3.

Multi-Unit Building Note: *The site is designed such that at least 40 percent of the multi-unit dwelling units have one south facing wall (within 15 degrees) containing at least 50 percent of glazing for entire unit, Effective shading is required for passive solar control on all south facing glazing. The floor area of at least 15 feet from the south facing perimeter glazing is massive and exposed to capture solar heat during the day and reradiate at night.*

703.7.2 Window shading. Automated solar protection or dynamic glazing is installed to provide shading for windows.

1

703.7.3 Passive cooling design. Passive cooling design features are in accordance with three or more of the following:

Points for three items:

3

Points for one additional item:

1

(1) Exterior shading is provided on east and west windows using one or a combination of the following:

(a) vine-covered trellises with the vegetation separated a minimum of 1 foot (305 mm) from face of building

(b) moveable awnings or louvers

(c) covered porches

(d) attached or detached conditioned/unconditioned enclosed space that provides full shade of east and west windows (e.g., detached garage, shed, or building)

(2) Overhangs are installed to provide shading on south-facing glazing in accordance with Section 703.7.1(7).

(Points not awarded if points are taken under Section 703.7.1.)

(3) Windows and/or venting skylights are located to facilitate cross ventilation.

GREEN BUILDING PRACTICES	POINTS
<p>(4) Solar reflective roof or radiant barrier is installed in climate zones 1, 2, or 3 and roof material achieves a 3-year aged criteria of 0.50.</p>	
<p>(5) Internal exposed thermal mass is a minimum of three inches (76 mm) in thickness. Thermal mass consists of concrete, brick, and/or tile fully adhered to a masonry base or other masonry material in accordance with one or a combination of the following:</p> <p>(a) A minimum of 1 square foot (0.09 m²) of exposed thermal mass of floor per 3 square feet (2.8 m²) of gross finished floor area.</p> <p>(b) A minimum of 3 square feet (2.8 m²) of exposed thermal mass in interior walls or elements per square foot (0.09 m²) of gross finished floor area.</p>	
<p>(6) Roofing material is installed with a minimum 0.75 inch (19 mm) continuous air space offset from the roof deck from eave to ridge.</p>	
<p>703.7.4 Passive solar heating design. In addition to the sun-tempered design features in Section 703.7.1, all of the following are implemented: <u>Note: Points shall not be awarded in Tropical Climate Zone.</u></p>	4
<p>(1) Additional glazing, no greater than 12 percent, is permitted on the south wall. This additional glazing is in accordance with the requirements of Section 703.7.1.</p>	
<p>(2) Additional thermal mass for any room with south-facing glazing of more than 7 percent of the finished floor area is provided in accordance with the following:</p> <p>(a) Thermal mass is solid and a minimum of 3 inches (76 mm) in thickness. Where two thermal mass materials are layered together (e.g., ceramic tile on concrete base) to achieve the appropriate thickness, they are fully adhered to (touching) each other.</p> <p>(b) Thermal mass directly exposed to sunlight is provided in accordance with the following minimum ratios:</p> <p>(i) Above latitude 35 degrees: 5 square feet (0.465 m²) of thermal mass for every 1 square foot (0.0929 m²) of south-facing glazing.</p> <p>(ii) Latitude 30 degrees to 35 degrees: 5.5 square feet (0.51 m²) of thermal mass for every 1 square foot (0.0929 m²) of south-facing glazing.</p> <p>(iii) Latitude 25 degrees to 30 degrees: 6 square feet (0.557 m²) of thermal mass for every 1 square foot (0.0929 m²) of south-facing glazing.</p> <p>(c) Thermal mass not directly exposed to sunlight is permitted to be used to achieve thermal mass requirements of Section 703.7.4 (2) based on a ratio of 40 square feet (3.72 m²) of thermal mass for every 1 square foot (0.0929 m²) of south-facing glazing.</p>	
<p>(3) In addition to return air or transfer grilles/ducts required by Section 703.7.1(9), provisions for forced airflow to adjoining areas are implemented as needed.</p>	

GREEN BUILDING PRACTICES	POINTS
704 HERS INDEX TARGET PATH	
704.1 HERS index Target Compliance. Compliance with the energy chapter shall be permitted to be based on the EPA HERS Index Target Procedure for Energy Star Qualified Homes. Points from Section 704 (HERS Index Target) shall not be combined with points from Section 702 (Performance Path) or Section 703 (Prescriptive Path).	
704.2 Point calculation. Points for Section 704 shall be computed based on Steps “1a” through “1d” of the EPA HERS Index Target Procedure. Points shall be computed individually for each building as follows: 30 + (percent less than EnergyStar HERS Index Target for that building) * 2.	
705 ADDITIONAL PRACTICES	
705.1 Application of additional practice points. Points from Section 705 can be added to points earned in Section 702 (Performance Path), Section 703 (Prescriptive Path), Section 704 (HERS Index Target Path), or Section 701.1.3 (alternative bronze level compliance).	
705.2 Lighting	
705.2.1 Lighting controls (Percentages for point thresholds are based on lighting not required for means of egress or security lighting as defined by local building codes.)	
705.2.1.1 Interior lighting. In dwelling units, permanently installed interior lighting fixtures are controlled with a vacancy sensor, occupancy sensor, or dimmer:	
(1) 25 percent of lighting fixtures.	1 TBD
(2) 50 percent of lighting fixtures.	<u>1</u> TBD
(3) 75 percent of lighting fixtures.	<u>2</u> TBD
705.2.1.2 Exterior lighting. Photo or motion sensors are installed on <u>75 percent of</u> outdoor lighting fixtures to control lighting. (Percentages for point thresholds does not include lighting equipped with photovoltaics.)	
(1) 25 percent of lighting fixtures.	T B <u>1</u>
(2) 50 percent of lighting fixtures.	T B <u>1</u>
(3) 75 percent of lighting fixtures.	T B <u>1</u>
705.2.1.3 Multi-unit common areas.	
(1) In a multi-unit building, vacancy sensors, occupancy sensors, or dimmers are installed in common areas (except corridors and stairwells).	

GREEN BUILDING PRACTICES	POINTS
(a) 25 percent of lighting fixtures.	1TBD
(b) 50 percent of lighting fixtures.	<u>1TBD</u>
(c) 75 percent of lighting fixtures.	<u>2TBD</u>
(2) In a multi-unit building, occupancy controls are installed to automatically reduce light levels in interior corridors and exit stairwells when the space is unoccupied. Light levels are reduced by:	
(a) A minimum of 50 percent or to local minimum requirements	<u>2TBD</u>
(b) A minimum of 75 percent	<u>3TBD</u>
705.2.1.4 In a multi-unit building, occupancy controls are installed to automatically reduce light levels in garages and parking structures when the space is unoccupied. Light levels are reduced by:	
(1) A minimum of 50 percent or to local minimum requirements	<u>2TBD</u>
(2) A minimum of 75 percent	<u>3TBD</u>
705.2.2 TDDs and skylights. A tubular daylighting device (TDD) or a skylight that meets the requirements of Table 703.2.6.2(a) is installed in rooms without windows. (Points awarded per building.)	
2	
705.2.3 Lighting outlets. Occupancy sensors are installed for a minimum of 80 percent of hard-wired lighting outlets in the interior living space.	1
705.3 Return ducts and transfer grilles. Return ducts or transfer grilles are installed in every room with a door. Return ducts or transfer grilles are not required for bathrooms, kitchens, closets, pantries, and laundry rooms.	52
705.4 HVAC design and installation	
705.4.1 HVAC contractor and service technician are certified by a nationally or regionally recognized program (e.g., North American Technician Excellence, Inc. (NATE), Air Conditioning Contractors of Americas Quality Assured Program (ACCA/QA), Building Performance Institute (BPI), Radiant Panel Association, or a manufacturer's training program).	1
705.4.2 Performance of the heating and/or cooling system is verified by the HVAC contractor in accordance with all of the following:	3
(1) Start-up procedure is performed in accordance with the manufacturer's instructions.	
(2) Refrigerant charge is verified by super-heat and/or sub-cooling method.	
(3) Burner is set to fire at input level listed on nameplate.	
(4) Air handler setting/fan speed is set in accordance with manufacturer's instructions.	
(5) Total airflow is within 10 percent of design flow.	
(6) Total external system static does not exceed equipment capability at rated airflow.	

GREEN BUILDING PRACTICES	POINTS
<p>704705.4.3 Manufacturer's label or printed specifications for sealed air handler (except furnaces) indicates the leakage is less than or equal to 2 percent of design airflow at a pressure of 1 inch of water (250 Pa). Air handlers are tested with inlets, outlets, and condensate drain ports sealed and filter box in place.</p>	<p>40</p>
<p>705.5 Installation and performance verification.</p>	
<p>705.5.1 Third-party on-site inspection is conducted to verify compliance with all of the following, as applicable. Minimum of two inspections are performed: one inspection after insulation is installed and prior to covering, and another inspection upon completion of the building. Where multiple buildings or dwelling units of the same model are built by the same builder, a representative sample inspection of a minimum of 15 percent of the buildings or dwelling units is permitted.</p>	<p><u>35</u></p>
<p>(1) Ducts are installed in accordance with the ICC IRC or IMC and ducts are sealed.</p>	
<p>(2) Building envelope air sealing is installed.</p>	
<p>(3) Insulation is installed in accordance with Section 703.1.2.</p>	
<p>(4) Windows, skylights, and doors are flashed, caulked, and sealed in accordance with manufacturer's instructions and in accordance with Section 701.4.3.</p>	
<p>705.5.2 Testing. Testing is conducted to verify performance.</p>	
<p>705.5.2.1 Building envelope leakage testing. Building envelope leakage testing is performed in accordance with the following:</p>	<p><u>5</u></p>
<p>(Points awarded only for buildings where building envelope leakage testing is not required by 2015 IECC.)</p>	
<p>(1) A blower door test and a visual inspection are performed as described in 701.4.3.2, and-</p>	<p>TBD</p>
<p>(2) Third-party verification is completed.</p>	<p>TBD</p>
<p>705.5.2.2 HVAC airflow testing. Balanced HVAC airflows are demonstrated by flow hood or other acceptable flow measurement tool by a third party. Test results are in accordance with both of the following:</p>	<p><u>58</u></p>
<p>(1) Measured flow at each supply and return register meets or exceeds the requirements in QI-5-2010, Section 5.2.</p>	
<p>(2) Total airflow meets or exceeds the requirements in QI-5-2010, Section 5.2.</p>	
<p>705.5.2.3 HVAC duct leakage testing. One of the following is achieved:</p>	
<p>(Points awarded only for buildings where duct leakage testing is not required by 2015 IECC.)</p>	
<p>(1) <u>Duct leakage is in accordance with 2015 IECC R403.3.3 and R403.3.4.</u></p>	<p><u>3X</u></p>
<p>(2) Duct leakage is in accordance with 2015 IECC R403.3.3 and R403.3.4, and testing is conducted by an independent third-party.</p>	<p><u>5X</u></p>

705.5.3 Insulating hot water pipes. Insulation with a minimum thermal resistance (R-value) of at least R-3 is applied to the following, as applicable:	1
(Points awarded only where these practices are not required by 2015 IECC.)	
(a) piping 3/4-inch and larger in outside diameter	
(b) piping serving more than one dwelling unit	
(c) piping located outside the conditioned space	
(d) piping from the water heater to a distribution manifold	
(e) piping located under a floor slab	
(f) buried piping	
(g) supply and return piping in recirculation systems other than demand recirculation systems	
705.5.4 Potable hot water demand re-circulation system.	
705.5.4.1 Potable hot water demand re-circulation system is installed in a single-family unit.	1 2-Max
(Points awarded per circulation zone)	
705.5.4.2 Potable hot water demand re-circulation system is installed in a multi-family unit in place of a standard circulation pump and control.	2 4-Max
(Points awarded per circulation zone)	
705.6 <u>In multi-unit buildings, an advanced electric and fossil fuel submetering system is installed to monitor electricity and fossil fuel consumption for each unit. The device provides consumption information on a monthly or near real-time basis. The information is available to the occupants at a minimum on a monthly basis.</u>	1
705.7 Recessed luminaires. <u>The number of recessed luminaires that penetrates the thermal envelope is less than 1 per 400 square feet (37.16 m²) of total conditioned floor area and they are in accordance with Section 701.4.3.5.</u>	1
705.8 Induction cooktop. <u>Induction cooktop is installed.</u>	1

706 INNOVATIVE PRACTICES

706.1 Energy consumption control. A whole-building or whole-dwelling unit device or system is installed that controls or monitors energy consumption.	73 Max
(1) programmable communicating thermostat with the capability to be controlled remotely	1
(2) energy-monitoring device or system	21
(3) energy management control system	43
(4) programmable thermostat with control capability based on occupant presence or usage pattern	TBD1

ENERGY EFFICIENCY

(5) lighting control system	TBD₁
-----------------------------	------------------------

706.2 Renewable energy service plan. Renewable energy service plan is provided as follows:	
(1) Builder selects a renewable energy service plan provided by the local electrical utility for interim (temporary) electric service. The builder’s local administrative office has renewable energy service.	1
(2) The buyer of the building selects one of the following renewable energy service plans provided by the utility prior to occupancy of the building with a minimum two-year commitment.	
(a) less than half of the dwelling’s projected electricity and gas use is provided by renewable energy	1
(b) half or more of the of the dwelling’s projected electricity and gas use is provided by renewable energy	5₂

706.3 Smart Appliances and Systems. Smart appliances and systems are installed as follows:	
(1) Refrigerator	
(2) Freezer	
(3) Dishwasher	
(4) Clothes Dryer	
(5) Clothes Washer	
(6) Room Air Conditioner	
(7) HVAC Systems	
(8) Service Hot Water Heating Systems	
	Three to five smart appliances installed
	Six or more smart appliances installed
	1
	2

(Items (7) and (8) are permitted to count as two appliances each for the purpose of awarding points.)

706.4 Pumps.

706.4.1 Pool, spa, and water features equipped with filtration pumps as follows:	
(1) Two-speed pump(s) is installed.	1
(2) (1) Electronically controlled variable-speed pump(s) is installed (<u>full load</u> efficiency of 90 percent or greater).	3₁
(2) <u>Electronically controlled variable-speed pump(s) is installed (full load efficiency of 90 percent or greater) in a pool.</u>	3

706.4.2 Sump pump(s) with electrically commutated motors (ECMs) or permanent split capacitor (PSC) motors is installed (<u>full load</u> efficiency of 90 percent or greater).	1
--	----------

706.5 On-site renewable energy system. An on-site renewable energy system(s) is installed on the property.	4 <u>2 points per</u> <u>kW</u> <u>Divided by</u> <u>number of</u>
---	---

<p>(building)Points awarded for every 100 W of system rating installed for every 2,000 square feet of total conditioned floor area of the building. Points shall not be awarded in this section for solar thermal or geothermal systems that provide space heating, space cooling, or water heating, Points for these systems are awarded in Section 703.)</p>	<u>dwelling units</u>
<p>(Where onsite renewable energy is included in Section 702 Performance Path or 704 HERS Index Target, Section 706.5 points shall not be awarded.)</p>	
<p><i>Multi-Unit Building Note: Conditioned common area and non-residential space is permitted to be excluded from the total conditioned floor area for the purpose of calculating awarded points number of units.</i></p>	
<p>706.6 Parking garage efficiency. Structured parking garages are designed to require no mechanical ventilation for fresh air requirements.</p>	2
<p>706.7 Grid-interactive electric thermal storage system. A grid-interactive electric thermal storage system is installed.</p>	
<p>(1) Grid-Interactive Water Heating System</p>	1
<p>(2) Grid-Interactive Space Heating <u>and Cooling</u> System</p>	<u>21</u>
<p>(where points awarded in Section 706.7, points shall not be awarded in Section 706.3 and 706.9) <u>Staff note to self: add same note in 706.9 and 706.3</u></p>	
<p>706.8 Electrical Vehicle Charging Station. A Level 2 or Level 3 electric vehicle charging station is installed on the building site. (Note: Charging station shall not be included in the building energy consumption.)</p>	<u>42</u>
<p>706.9 Automatic demand response. Automatic demand response system is installed that curtails energy usage upon a signal from the utility or an energy service provider is installed.</p>	<u>21</u>

THIS PAGE INTENTIONALLY LEFT BLANK

CHAPTER 8

WATER EFFICIENCY

GREEN BUILDING PRACTICES	POINTS
801 INDOOR AND OUTDOOR WATER USE	
801.0 Intent. Measures that reduce indoor and outdoor water usage are implemented.	
<p>801.1 Indoor hot water usage. Indoor hot water supply system is in accordance with one of the practices listed in items (1) through (5). The maximum water volume from the source of hot water to the termination of the fixture supply is determined in accordance with Tables 801.1(1) or 801.1(2). The maximum pipe length from the source of hot water to the termination of the fixture supply is 50 feet.</p> <p style="text-align: center;">(Where more than one water heater is used or where more than one type of hot water supply system, including multiple circulation loops, is used, points are awarded only for the system that qualifies for the minimum number of points.)</p> <p style="text-align: center;">(Systems with circulation loops are eligible for points only if pumps are demand controlled. Circulation systems with timers or aquastats and constant-on circulation systems are not eligible to receive points.)</p> <p style="text-align: center;">(Points awarded only if the pipes are insulated in accordance with Section 705.5.3.)</p>	
(1) The maximum volume from the water heater to the termination of the fixture supply at furthest fixture is 128 ounces (1 gallon or 3.78 liters).	11
(2) The maximum volume from the water heater to the termination of the fixture supply at furthest fixture is 64 ounces (0.5 gallon or 1.89 liters).	17
(3) The maximum volume from the water heater to the termination of the fixture supply at furthest fixture is 32 ounces (0.25 gallon or 0.945 liters).	29
(4) A demand controlled hot water priming pump is installed on the main supply pipe of the circulation loop and the maximum volume from this supply pipe to the furthest fixture is 24 ounces (0.19 gallons or 0.71 liters).	35
(a) The volume in the circulation loop (supply) from the water heater or boiler to the branch for the furthest fixture is no more than 128 ounces (1 gallon or 3.78 liters).	4 Additional
(5) A central hot water recirculation system is implemented in multi-unit buildings in which the hot water line distance from the recirculating loop to the engineered parallel piping system (i.e., manifold system) is less than 30 feet (9,144 mm) and the parallel piping to the fixture fittings contains a maximum of 64 ounces (1.89 liters) (115.50 cubic inches) (0.50 gallons).	9

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

(6) Tankless water heater(s) with at least 0.5 gallon (1.89 liters) of storage are installed, or a tankless water heater that ramps up to at least 110F within 5 seconds is installed. The storage may be internal or external to the tankless water heater.

4 Additional

**Table 801.1(1)
Maximum Pipe Length Conversion Table^a**

Nominal Pipe Size (inch)	Liquid Ounces per Foot of Length	Main, Branch, and Fixture Supply System Volume Category			Branch and Fixture Supply Volume from Circulation Loop
		128 ounces (1 gallons) [per 801.1(1)]	64 ounces (0.5 gallon) [per 801.1(2)]	32 ounces (0.25 gallon) [per 801.1(3)]	24 ounces (0.19 gallon) [per 801.1(4)]
		Maximum Pipe Length (feet)			
1/4 ^b	0.33	50	50	50	50
5/16 ^b	0.5	50	50	50	48
3/8 ^b	0.75	50	50	43	32
1/2	1.5	50	43	21	16
5/8	2	50	32	16	12
3/4	3	43	21	11	8
7/8	4	32	16	8	6
1	5	26	13	6	5
1 1/4	8	16	8	4	3
1 1/2	11	12	6	3	2
2	18	7	4	2	1

- a. Maximum pipe length figures apply when the entire pipe run is one nominal diameter only. Where multiple pipe diameters are used, the combined volume shall not exceed the volume limitation in Section 801.1.
- b. The maximum flow rate through 1/4 inch nominal piping shall not exceed 0.5 gpm. The maximum flow rate through 5/16 inch nominal piping shall not exceed 1 gpm. The maximum flow rate through 3/8 inch nominal piping shall not exceed 1.5 gpm.

**Table 801.1(2)
Common Hot Water Pipe Internal Volumes
OUNCES OF WATER PER FOOT OF PIPE**

Size Nominal, Inch	Copper Type M	Copper Type L	Copper Type K	CPVC CTS SDR 11	CPVC SCH 40	CPVC SCH 80	PE-RT SDR 9	Composite ASTM F 1281	PEX CTS SDR 9	PP SDR 7.4 F2389	PP SDR 9 F2389
3/8	1.06	0.97	0.84	N/A	1.17	N/A	0.64	0.63	0.64	N/A	N/A
1/2	1.69	1.55	1.45	1.25	1.89	1.46	1.18	1.31	1.18	1.72	1.96
3/4	3.43	3.22	2.90	2.67	3.38	2.74	2.35	3.39	2.35	2.69	3.06
1	5.81	5.49	5.17	4.43	5.53	4.57	3.91	5.56	3.91	4.41	5.01
1 ¼	8.70	8.36	8.09	6.61	9.66	8.24	5.81	8.49	5.81	6.90	7.83
1 ½	12.18	11.83	11.45	9.22	13.2	11.38	8.09	13.88	8.09	10.77	12.24
2	21.08	20.58	20.04	15.79	21.88	19.11	13.86	21.48	13.86	17.11	19.43

GREEN BUILDING PRACTICES	POINTS
801.2 Water-conserving appliances. ENERGY STAR or equivalent water-conserving appliances are installed.	
(1) dishwasher	2
(2) washing machine, or	13
(3) washing machine with a water factor of 4.0 or less	24
Multi-Unit Building Note: <i>Washing machines are installed in individual units or provided in common areas of multi-unit buildings.</i>	
801.3 Showerheads. Showerheads are in accordance with the following:	
<p>(1) The total maximum combined flow rate of all showerheads controlled by a single valve at any point in time in a shower compartment is 1.6 to less than 2.5 gpm. Maximum of two valves are installed per shower compartment. The flow rate is tested at 80 psi (552 kPa) in accordance with ASME A112.18.1. Showerheads are served by an automatic compensating valve that complies with ASSE 1016 or ASME A112.18.1 and specifically designed to provide thermal shock and scald protection at the flow rate of the showerhead.</p> <p>(Points awarded per shower compartment. In multi-unit buildings, the average of the points assigned to individual dwelling units may be used as the number of points awarded for this practice, rounded to the nearest whole number.)</p>	<p>4 for first compartment</p> <p>1 for each additional compartment in dwelling</p> <p>7 Max</p>
(2) All shower compartments in the dwelling unit(s) and common areas meet the requirements of 801.3(1) and all showerheads are in accordance with one of the following:	
(a) 2.0 to less than 2.5 gpm	11-6 Additional
(b) 1.6 to less than 2.0 gpm	14-10 Additional
(c) Less than 1.6 gpm	TBD 14
<p>(3) Any shower control that can shut off water flow without affecting temperature is installed.</p> <p>(Points awarded per shower control.)</p>	<p>1</p> <p>3 Max</p>
For SI: 1 gallon per minute = 3.785 L/m	
801.4 Lavatory faucets	
801.4.1 Water-efficient lavatory faucets with a maximum flow rate of 1.5 gpm (5.68 L/m), tested at 60 psi (414 kPa) in accordance with ASME A112.18.1, are installed:	
<p>(1) a bathroom (all faucets in a bathroom are in compliance)</p> <p>(Points awarded for each bathroom. In multi-unit buildings, the average of the points assigned to individual dwelling units may be used as the number of points awarded for this practice, rounded to the nearest whole number.)</p>	<p>1</p> <p>3 Max</p>
(2) all lavatory faucets in the dwelling unit(s)	6 Additional

WATER EFFICIENCY

GREEN BUILDING PRACTICES	POINTS
<p>801.4.2 Self-closing valve, motion sensor, metering, or pedal-activated faucet is installed to enable intermittent on/off operation.</p> <p style="text-align: right;">(Points awarded per fixture.)</p>	<p>1 3 Max</p>
<p>801.5 Water closets and urinals. Water closets and urinals are in accordance with the following: (Points awarded for 801.5(2) or 801.5(3), not both.)</p>	
<p>(1) Gold and emerald levels: All water closets and urinals are in accordance with Section 801.5.</p>	Mandatory
<p>(2) A water closet is installed with an effective flush volume of 1.28 gallons (4.85 L) or less and meets the flush performance criteria when tested in accordance with ASME A112.19.2/CSA B45.1 or ASME A112.19.14 as applicable.</p> <p style="text-align: center;">(Points awarded per fixture. In multi-unit buildings, the average of the points assigned to individual dwelling units may be used as the number of points awarded for this practice, rounded to the nearest whole number.)</p>	<p>2 6 Max</p>
<p>(3) All water closets are in accordance with Section 801.5(2).</p>	11
<p>(4) All water closets are in accordance with Section 801.5(2) and one or more of the following are installed:</p>	
<p>(a) Water closets that have a flush volume of 1.2 gallons or less.</p> <p style="text-align: center;">(Points awarded per toilet. In multi-unit buildings, the average of the points assigned to individual dwelling units may be used as the number of points awarded for this practice, rounded to the nearest whole number.)</p>	<p>1 Additional 3 Additional Max</p>
<p>(b) One or more urinals with a flush volume of 0.5 gallons (1.9L) or less when tested in accordance with ASME A112.19.2.</p>	1 Additional
<p>(c) One or more composting or waterless toilets and/or urinals.</p>	6 Additional
<p>801.6 Irrigation systems</p>	
<p>801.6.1 Multi-stream, multi-trajectory rotating nozzles or spray head nozzles have a maximum precipitation rate of 1.20 inches per hour for turf or landscaping. Nozzle performance is tested by an accredited third party laboratory and results are posted.</p>	6
<p>801.6.2 Drip irrigation is installed.</p>	8-13 Max
<p>(1) Drip irrigation is installed for all landscape beds.</p>	4
<p>(2) Subsurface drip is installed for all turf grass areas.</p>	4
<p>(3) Drip irrigation zones specifications show plant type by name and water use/need for each emitter (Points awarded only if specifications are implemented.)</p>	TBD5
<p>801.6.3 Irrigation plan and implementation are executed by a professional certified by a WaterSense labeled program or equivalent as approved by Adopting Entity.</p>	5-10

GREEN BUILDING PRACTICES	POINTS
<p>801.6.4 The irrigation system(s) is controlled by a smart controller or no irrigation is installed. (Points are not additive.)</p>	
<p>(1) Evapotranspiration (ET) based irrigation controller with a rain sensor or soil moisture sensor based irrigation controller.</p>	<p>8</p>
<p>(2) Irrigation controllers are in accordance with WaterSense Specification for Weather-Based Irrigation Controllers Version 1.0, 2011</p>	<p>10</p>
<p>(3) No irrigation is installed and a landscape plan is developed in accordance with Section 503.5, as applicable.</p>	<p>15</p>
<p>801.6.5 All sprinkler irrigation zones utilize pressure regulation so sprinklers operate at manufacturer’s recommended operating pressure.</p>	<p>3</p>
<p>801.7 Rainwater collection and distribution. Rainwater collection and distribution is provided.</p>	
<p>801.7.1 Rainwater is used for irrigation in accordance with one of the following:</p>	
<p>(1) Rainwater is diverted for landscape irrigation without impermeable water storage</p>	<p>5</p>
<p>(2) Rainwater is diverted for landscape irrigation with impermeable water storage in accordance with one of the following:</p>	
<p>(a) 50 – 499 gallon storage capacity</p>	<p>5</p>
<p>(b) 500 – 2499 gallon storage capacity</p>	<p>10</p>
<p>(c) 2500 gallon or larger storage capacity (system is designed by a professional certified by The American Rainwater Catchment Systems Association or equivalent)</p>	<p>15</p>
<p>(d) All irrigation demands are met by rainwater capture (documentation demonstrating the water needs of the landscape is provided and the system is designed by a professional certified by The American Rainwater Catchment Systems Association or equivalent).</p>	<p>25</p>
<p>801.7.2 Rainwater is used for indoor domestic demand as follows. The system is designed by a professional certified by The American Rainwater Catchment Systems Association or equivalent.</p>	
<p>(1) Rainwater is used to supply an indoor appliance or fixture for any locally approved use. (Points awarded per appliance or fixture.)</p>	<p>5 15 Max</p>
<p>(2) Rainwater provides for total domestic demand.</p>	<p>25</p>
<p>801.8 Sediment filters. Water filter is installed to reduce sediment and protect plumbing fixtures for the whole building or the entire dwelling unit.</p>	<p>1</p>

GREEN BUILDING PRACTICES	POINTS
802 INNOVATIVE PRACTICES	
<p>802.1 Reclaimed, gray, or recycled water. Reclaimed, gray, or recycled water is used as permitted by applicable code.</p> <p style="text-align: center;">(Points awarded for either Section 802.1(1) or 802.1(2), not both.)</p> <p style="text-align: center;">(Points awarded for either Section 802.5 or 802.1, not both.)</p>	
<p>(1) each water closet flushed by reclaimed, gray, or recycled water</p> <p style="text-align: center;">(Points awarded per fixture or appliance.)</p>	<p>5</p> <p>20 Max</p>
<p>(2) irrigation from reclaimed, gray, or recycled water on-site</p>	<p>10</p>
<p>802.2 Reclaimed water, graywater, or rainwater pre-piping. Reclaimed, graywater, or rainwater systems are rough plumbed into buildings for future use where service is not yet available or permitted by applicable codes or by the authority having jurisdiction.</p>	<p>+3 per roughed in system</p>
<p>802.3 Automatic shutoff water devices. One of the following automatic shutoff water supply devices is installed. Where a fire sprinkler system is present, installer is to ensure the device will not interfere with the operation of the fire sprinkler system.</p>	<p>2</p>
<p>(1) excess water flow automatic shutoff</p>	
<p>(2) leak detection system with automatic shutoff</p>	
<p>802.4 Engineered biological system or intensive bioremediation system. An engineered biological system or intensive bioremediation system is installed and the treated water is used on site. Design and implementation are approved by appropriate regional authority.</p>	<p>20</p>
<p>802.5 Recirculating humidifier. Where a humidifier is required, a recirculating humidifier is used in lieu of a traditional “flow through” type.</p>	<p>1</p>
<p>802.6 Advanced wastewater treatment system. Advanced wastewater (aerobic) treatment system is installed and treated water is used on site.</p> <p style="text-align: center;">(Points awarded for either Section 802.6 or 802.1, not both.)</p>	<p>20</p>

CHAPTER 9

INDOOR ENVIRONMENTAL QUALITY

GREEN BUILDING PRACTICES	POINTS
901 POLLUTANT SOURCE CONTROL	
901.0 Intent. Pollutant sources are controlled.	
901.1 Space and water heating options	
901.1.1 Natural draft furnaces, boilers, or water heaters are not located in conditioned spaces, including conditioned crawlspaces, unless located in a mechanical room that has an outdoor air source and is sealed and insulated to separate it from the conditioned space(s). <p style="text-align: center;">(Points are awarded only for buildings that use natural draft combustion space or water heating equipment.)</p>	5
901.1.2 Air handling equipment or return ducts are not located in the garage, unless placed in isolated, air-sealed mechanical rooms with an outside air source.	5
901.1.3 The following combustion space heating or water heating equipment is installed within conditioned space:	
(1) all furnaces or all boilers (a) power vent furnace(s) or boiler(s) (b) direct vent furnace(s) or boiler(s)	3
(b) direct vent furnace(s) or boiler(s)	5
(2) all water heaters (a) power vent water heater(s) (b) direct vent water heater(s)	3
(b) direct vent water heater(s)	5
901.1.4 Gas-fired fireplaces and direct heating equipment is listed and is installed in accordance with the NFPA 54, ICC IFGC, or the applicable local gas appliance installation code. Gas-fired fireplaces and direct heating equipment are vented to the outdoors.	Mandatory
901.1.5 Natural gas and propane fireplaces are direct vented, have permanently fixed glass fronts or gasketed doors, and comply with CSA Z21.88/CSA 2.33 or CSA Z21.50b/CSA 2.22b.	7
901.1.6 The following electric equipment is installed:	
(1) heat pump air handler in unconditioned space	2
(2) heat pump air handler in conditioned space	5

GREEN BUILDING PRACTICES	POINTS
901.2 Solid fuel-burning appliances	
901.2.1 Solid fuel-burning fireplaces, inserts, stoves and heaters are code compliant and are in accordance with the following requirements:	Mandatory
(1) Site-built masonry wood-burning fireplaces use outside combustion air and include a means of sealing the flue and the combustion air outlets to minimize interior air (heat) loss when not in operation.	4
(2) Factory-built, wood-burning fireplaces are in accordance with the certification requirements of UL 127 and are EPA certified or Phase 2 Qualified.	6
(3) Wood stove and fireplace inserts, as defined in UL 1482 Section 3.8, are in accordance with the certification requirements of UL 1482 and are in accordance with the emission requirements of the EPA Certification and the State of Washington WAC 173-433-100(3).	6
(4) Pellet (biomass) stoves and furnaces are in accordance with ASTM E1509 or are EPA certified.	6
(5) Masonry heaters are in accordance with the definitions in ASTM E1602 and ICC IBC Section 2112.1.	6
901.2.2 Fireplaces, woodstoves, pellet stoves, or masonry heaters are not installed.	7
901.3 Garages. Garages are in accordance with the following:	
(1) Attached garage	
(a) Doors installed in the common wall between the attached garage and conditioned space are tightly sealed and gasketed.	Mandatory 2
(b) A continuous air barrier is provided separating the garage space from the conditioned living spaces.	Mandatory 2
(c) For one- and two-family dwelling units, a 100 cfm (47 L/s) or greater ducted or 70 cfm (33 L/s) cfm or greater unducted wall exhaust fan is installed and vented to the outdoors and is designed and installed for continuous operation or has controls (e.g., motion detectors, pressure switches) that activate operation for a minimum of 1 hour when either human passage door or roll-up automatic doors are operated. For ducted exhaust fans, the fan airflow rating and duct sizing are in accordance with Appendix A.	8
(2) A carport is installed, the garage is detached from the building, or no garage is installed.	10
901.4 Wood materials. A minimum of 85 percent of material within a product group (i.e., wood structural panels, countertops, composite trim/doors, custom woodwork, and/or component closet shelving) is manufactured in accordance with the following:	10 Max
(1) Structural plywood used for floor, wall, and/or roof sheathing is compliant with DOC PS 1 and/or DOC PS 2. OSB used for floor, wall, and/or roof sheathing is compliant with DOC PS 2. The panels are made with moisture-resistant adhesives. The trademark indicates these adhesives as follows: Exposure 1 or Exterior for plywood, and Exposure 1 for OSB.	Mandatory

GREEN BUILDING PRACTICES	POINTS
<p>(2) Particleboard and MDF (medium density fiberboard) is manufactured and labeled in accordance with CPA A208.1 and CPA A208.2, respectively.</p> <p style="text-align: right;">(Points awarded per product group.)</p>	2
<p>(3) Hardwood plywood in accordance with HPVA HP-1.</p> <p style="text-align: right;">(Points awarded per product group.)</p>	2
<p>(4) Particleboard, MDF, or hardwood plywood is in accordance with CPA 4.</p> <p style="text-align: right;">(Points awarded per product group.)</p>	3
<p>(5) Composite wood or agrifiber panel products contain no added urea-formaldehyde or are in accordance with the CARB <i>Composite Wood Air Toxic Contaminant Measure Standard</i>.</p> <p style="text-align: right;">(Points awarded per product group.)</p>	4
<p>(6) Non-emitting products.</p> <p style="text-align: right;">(Points awarded per product group.)</p>	4
<p>901.5 Cabinets. A minimum of 85 percent of installed cabinets are in accordance with one or both of the following:</p> <p style="text-align: center;">(Where both of the following practices are used, only 3 points are awarded.)</p>	
<p>(1) All parts of the cabinet are made of solid wood or non-formaldehyde emitting materials such as metal or glass.</p>	5
<p>(2) The composite wood used in wood cabinets is in accordance with CARB <i>Composite Wood Air Toxic Contaminant Measure Standard</i> or equivalent as certified by a third-party program such as, but not limited to, those in Appendix D.</p>	3
<p>901.6 Carpets. Wall-to-wall carpeting is not installed adjacent to water closets and bathing fixtures.</p>	Mandatory
<p>901.7 Floor materials. The following types of finished flooring materials are used. The materials have emission levels in accordance with CDPH/EHLB Standard Method v1.1. Product is tested by a laboratory with the CDPH/EHLB Standard Method v1.1 within the laboratory scope of accreditation to ISO/IEC 17025 and certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D. Points are awarded for every 10% of conditioned floor space using one of the below materials:</p>	
<p>(1) Hard surface flooring: Prefinished installed hard-surface flooring is installed. Where post-manufacture coatings or surface applications have not been applied, the following hard surface flooring types are deemed to comply with the emission requirements of this practice:</p>	<u>68</u>

GREEN BUILDING PRACTICES	POINTS
<p>(a) Ceramic tile flooring</p> <p>(b) Organic-free, mineral-based flooring</p> <p>(c) Clay masonry flooring</p> <p>(d) Concrete masonry flooring</p> <p>(e) Concrete flooring</p> <p>(f) Metal flooring</p>	
<p>(2) Carpet and carpet cushion is installed.</p> <p style="text-align: center;">(When carpet cushion meeting the emission limits of the practice is also installed, the percentage of compliant carpet area is calculated at 1.33 times the actual installed area.)</p>	

<p>901.8 Wall coverings. A minimum of 10 percent of the interior wall surfaces are covered and a minimum of 85 percent of wall coverings are in accordance with the emission concentration limits of CDPH/EHLB Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.</p>	4
--	----------

<p>901.9 Interior architectural coatings. A minimum of 85 percent of the interior architectural coatings are in accordance with either Section 901.9.1 or Section 901.9.3, not both. A minimum of 85 percent of architectural colorants are in accordance with Section 901.9.2.</p>	
<p>Exception: Interior architectural coatings that are formulated to remove formaldehyde and other aldehydes in indoor air and are tested and labeled in accordance with ISO 16000-23, Indoor air -- Part 23: Performance test for evaluating the reduction of formaldehyde concentrations by sorptive building materials.</p>	

<p>901.9.1 Site-applied interior architectural coatings, which are inside the water proofing envelope, are in accordance with one or more of the following:</p>	5														
<p>(1) Zero VOC as determined by EPA Method 24 (VOC content is below the detection limit for the method)</p>															
<p>(2) GreenSeal GS-11</p>															
<p>(3) CARB <i>Suggested Control Measure for Architectural Coatings</i> (see Table 901.9.1).</p>															
<p>Table 901.9.1 VOC Content Limits For Architectural Coatings^{a,b,c}</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;">Coating Category</th> <th style="text-align: center;">LIMIT^d (g/l)</th> </tr> </thead> <tbody> <tr> <td>Flat Coatings</td> <td style="text-align: center;">50</td> </tr> <tr> <td>Non-flat Coatings</td> <td style="text-align: center;">100</td> </tr> <tr> <td>Non-flat High-Gloss Coatings</td> <td style="text-align: center;">150</td> </tr> <tr> <td>Specialty Coatings:</td> <td></td> </tr> <tr> <td>Aluminum Roof Coatings</td> <td style="text-align: center;">400</td> </tr> <tr> <td>Basement Specialty Coatings</td> <td style="text-align: center;">400</td> </tr> </tbody> </table>		Coating Category	LIMIT ^d (g/l)	Flat Coatings	50	Non-flat Coatings	100	Non-flat High-Gloss Coatings	150	Specialty Coatings:		Aluminum Roof Coatings	400	Basement Specialty Coatings	400

Adhesive primer for plastic	550	
Contact adhesive	80	
Special purpose contact adhesive	250	
Structural wood member adhesive	140	
<p>a. VOC limit less water and less exempt compounds in grams/liter</p> <p>b. For low-solid adhesives and sealants, the VOC limit is expressed in grams/liter of material as specified in Rule 1168. For all other adhesives and sealants, the VOC limits are expressed as grams of VOC per liter of adhesive or sealant less water and less exempt compounds as specified in Rule 1168.</p>		

<p>901.11 Insulation. Emissions of 85 percent of wall, ceiling, and floor insulation materials are in accordance with the emission levels of CDPH/EHLB Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. Insulation is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.</p>	4
--	----------

<p>901.12 Carbon monoxide (CO) alarms. A carbon monoxide (CO) alarm is installed in a central location outside of each separate sleeping area in the immediate vicinity of the bedrooms. The CO alarm(s) is located in accordance with NFPA 720 and is hardwired with a battery backup. The alarm device(s) is certified by a third-party for conformance to either CSA 6.19 or UL 2034.</p>	4
---	----------

<p>901.13 Building entrance pollutants control. Pollutants are controlled at all main building entrances by one of the following methods:</p>	
<p>(1) Exterior grilles or mats are installed in a fixed manner and may be removable for cleaning.</p>	1
<p>(2) Interior grilles or mats are installed in a fixed manner and may be removable for cleaning.</p>	1

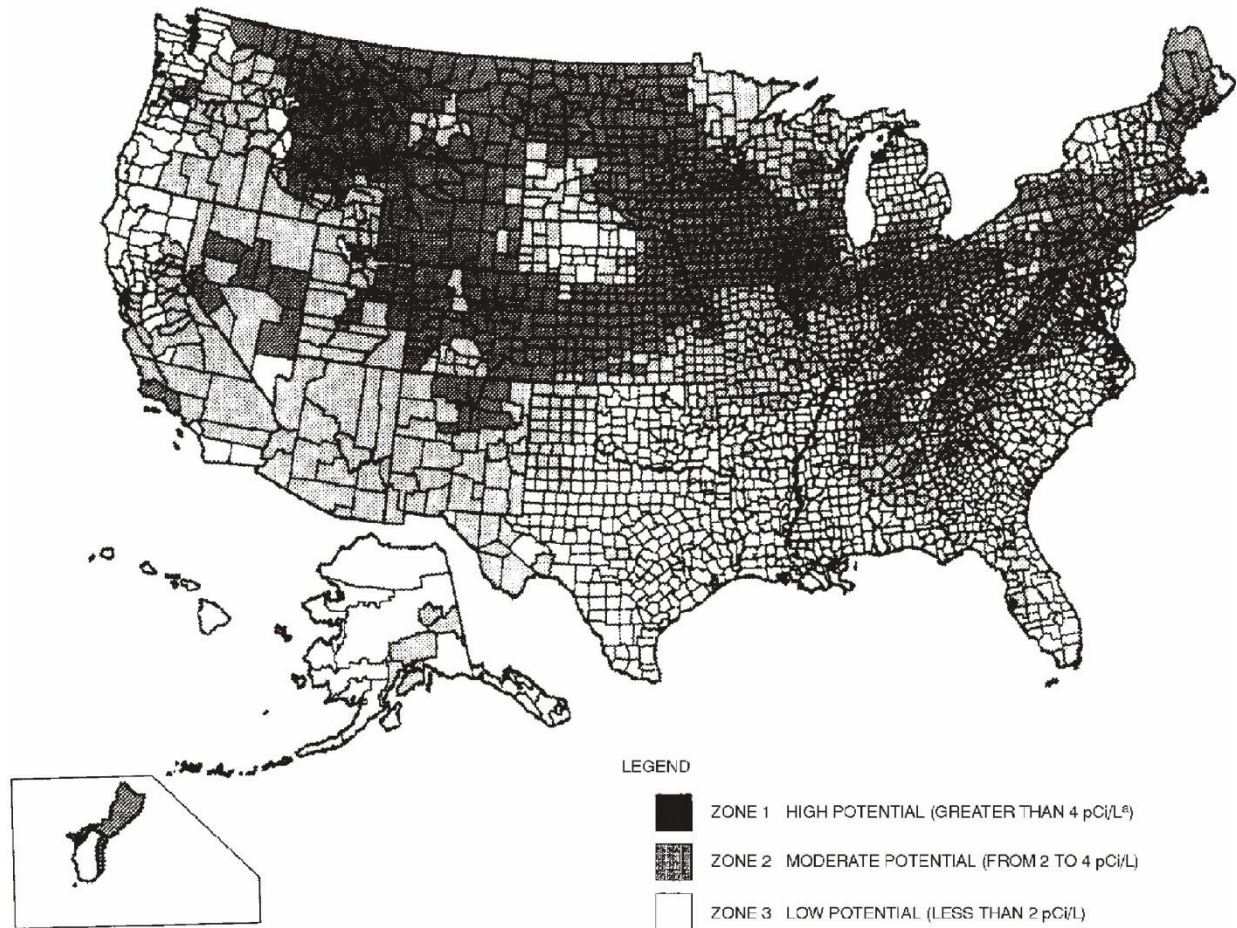

<p>901.14 Non-smoking areas. Environmental tobacco smoke is minimized by one or more of the following:</p>	
<p>(1) All interior common areas of a multi-unit building are designated as non-smoking areas with posted signage.</p>	1
<p>(2) Exterior smoking areas of a multi-unit building are designated with posted signage and located a minimum of 25 feet from entries, outdoor air intakes, and operable windows.</p>	1

GREEN BUILDING PRACTICES		POINTS
902 POLLUTANT CONTROL		
902.0 Intent. Pollutants generated in the building are controlled.		
902.1 Spot ventilation.		
902.1.1 Spot ventilation is in accordance with the following:		
(1) Bathrooms are vented to the outdoors. The minimum ventilation rate is 50 cfm (23.6 L/s) for intermittent operation or 20 cfm (9.4 L/s) for continuous operation in bathrooms. (Points are awarded only if a window complying with IRC Section R303.3 is provided in addition to mechanical ventilation.)	Mandatory 1	
(2) Clothes dryers (except listed and labeled condensing ductless dryers) are vented to the outdoors.	Mandatory	
(3) Kitchen exhaust units and/or range hoods are ducted to the outdoors and have a minimum ventilation rate of 100 cfm (47.2 L/s) for intermittent operation or 25 cfm (11.8 L/s) for continuous operation.	8	
902.1.2 Bathroom and/or laundry exhaust fan is provided with an automatic timer and/or humidistat:		11 Max
(1) for first device	5	
(2) for each additional device	2	
902.1.3 Kitchen range, bathroom, and laundry exhaust are verified to air flow specification. Ventilation airflow at the point of exhaust is tested to a minimum of:		8
(a) 100 cfm (47.2 L/s) intermittent or 25 cfm (11.8 L/s) continuous for kitchens, and		
(b) 50 cfm (23.6 L/s) intermittent or 20 cfm (9.4 L/s) continuous for bathrooms and/or laundry		
902.1.4 Exhaust fans are ENERGY STAR, as applicable.		12 Max
(1) ENERGY STAR, or equivalent, fans (Points awarded per fan.)	2	
(2) ENERGY STAR, or equivalent, fans operating at or below 1 sone (Points awarded per fan.)	3	
902.1.5 Fenestration in spaces other than those identified in 902.1.1 through 902.1.4 are designed for cross-ventilation in accordance with all of the following:		
(1) Operable windows and sliding glass doors with a total area of at least 15 percent of the conditioned floor area are provided.		
(2) Insect screens are provided for all operable windows and sliding glass doors.		

GREEN BUILDING PRACTICES	POINTS
<p>(3) A minimum of two windows or sliding glass doors are placed in adjacent or opposite walls. If there is only one wall surface in that space exposed to the exterior, the minimum windows or sliding glass doors may be on the same wall.</p>	
<p>902.2 Building ventilation systems.</p>	
<p>902.2.1 One of the following whole building ventilation systems is implemented and is in accordance with the specifications of Appendix B and an explanation of the operation and importance of the ventilation system is included in either 1001.1 or 1003.2.</p>	<p>Mandatory where the maximum air infiltration rate is less than 5.0 ACH50</p>
<p>(1) exhaust or supply fan(s) ready for continuous operation and with appropriately labeled controls</p>	<p>3</p>
<p>(2) balanced exhaust and supply fans with supply intakes located in accordance with the manufacturer’s guidelines so as to not introduce polluted air back into the building</p>	<p>6</p>
<p>(3) heat-recovery ventilator</p>	<p>7</p>
<p>(4) energy-recovery ventilator</p>	<p>8</p>
<p>902.2.2 Ventilation airflow is tested to achieve the design fan airflow at point of exhaust in accordance with Section 902.2.1.</p>	<p>4</p>
<p>902.2.3 MERV filters 8 or greater are installed on central forced air systems and are accessible. Designer or installer is to verify that the HVAC equipment is able to accommodate the greater pressure drop of MERV 8 filters.</p>	<p>3</p>
<p>902.3 Radon control. Radon control measures are in accordance with ICC IRC Appendix F. Zones as defined in Figure 9(1).</p>	
<p>(1) Buildings located in Zone 1</p>	<p>Mandatory</p>
<p>(a) a passive radon system is installed</p>	<p>7</p>
<p>(b) an active radon system is installed</p>	<p>10</p>
<p>(2) Buildings located in Zone 2 or Zone 3</p>	
<p>(a) a passive or active radon system is installed</p>	<p>7</p>
<p>902.4 HVAC system protection. One of the following HVAC system protection measures is performed.</p>	
<p>(1) HVAC supply registers (boots), return grilles, and rough-ins are covered during construction activities to prevent dust and other pollutants from entering the system.</p>	
<p>(2) Prior to owner occupancy, HVAC supply registers (boots), return grilles, and duct terminations are inspected and vacuumed. In addition, the coils are inspected and cleaned and the filter is replaced if necessary.</p>	<p>3</p>

GREEN BUILDING PRACTICES	POINTS
902.5 Central vacuum systems. Central vacuum system is installed and vented to the outside.	3
902.6 Living space contaminants. The living space is sealed in accordance with Section 701.4.3.1 to prevent unwanted contaminants.	Mandatory
903 MOISTURE MANAGEMENT: VAPOR, RAINWATER, PLUMBING, HVAC	
903.0 Intent. Moisture and moisture effects are controlled.	
903.1 Plumbing	
903.1.1 Cold water pipes in unconditioned spaces are insulated to a minimum of R-4 with pipe insulation or other covering that adequately prevents condensation.	2
903.1.2 Plumbing is not installed in unconditioned spaces.	5
903.2 Duct insulation. Ducts are in accordance with one of the following.	
(1) All HVAC ducts, plenums, and trunks are located in conditioned space.	1
(2) All HVAC ducts, plenums, and trunks are in conditioned space. All HVAC ducts are insulated to a minimum of R4.	3
903.3 Relative humidity. In climate zones 1A, 2A, 3A, 4A, and 5A as defined by Figure 6(1), equipment is installed to maintain relative humidity (RH) at or below 60 percent using one of the following: (Points not awarded in other climate zones.)	7
(1) additional dehumidification system(s)	
(2) central HVAC system equipped with additional controls to operate in dehumidification mode	
904 INDOOR AIR QUALITY	
904.0 Intent. IAQ is protected by best practices to control ventilation, moisture, pollutant sources and sanitation.	
904.1 Indoor Air Quality (IAQ) During Construction. Wood is dry before close-in (602.1.7(3)), materials comply with emission criteria (901.4- 901.11), sources of water infiltration or condensation observed during construction have been eliminated, accessible interior surfaces are dry and free of visible suspect growth (per ASTM D7338-10 section 6.3), water damage (per ASTM D7338-10 section 7.4.3), and visible dust.	TBD₂
904.2 Indoor Air Quality (IAQ) Post Completion. Verify moisture, mold, and dust issues.	TBD₃
905 INNOVATIVE PRACTICES	

GREEN BUILDING PRACTICES	POINTS
<p>905.1 Humidity monitoring system. A humidity monitoring system is installed with a mobile base unit that displays readings of temperature and relative humidity. The system has a minimum of two remote sensor units. One remote sensor unit is placed permanently inside the conditioned space in a central location, excluding attachment to exterior walls, and another remote sensor unit is placed permanently outside of the conditioned space.</p>	2
<p>905.2 Kitchen exhaust. A kitchen exhaust unit(s) that equals or exceeds 400 cfm (189 L/s) is installed, and makeup air is provided.</p>	2

a. pCi/L standard for picocuries per liter of radon gas. EPA recommends that all homes that measure 4 pCi/L and greater be mitigated.

The United States Environmental Protection Agency and the United States Geological Survey have evaluated the radon potential in the United States and have developed a map of radon zones designed to assist building officials in deciding whether radon-resistant features are applicable in new construction.

The map assigns each of the 3,141 counties in the United States to one of three zones based on radon potential. Each zone designation reflects the average short-term radon measurement that can be expected to be measured in a building without the implementation of radon control methods. The radon zone designation of highest priority is Zone 1. This table lists the Zone 1 counties illustrated on the map. More detailed information can be obtained from state-specific booklets (EPA-402-R-93-021 through 070) available through state radon offices or from U.S. EPA regional offices.

CHAPTER 10

OPERATION, MAINTENANCE, AND BUILDING OWNER EDUCATION

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

1001 HOMEOWNER'S MANUAL AND TRAINING GUIDELINES FOR ONE- AND TWO-FAMILY DWELLINGS
--

1001.0 Intent. Information on the building's use, maintenance, and green components is provided.

1001.1 A homeowner's manual is provided and stored in a permanent location in the dwelling that includes the following, as available and applicable. <p style="text-align: center;">(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	1 8 Max
(1) Detailed information about the National Green Building Standard, its requirements, and how NGBS compliance was determined, along with a green building program certificate or completion document.	Mandatory
(2) List of green building features (can include the national green building checklist).	Mandatory
(3) Product manufacturer's manuals or product data sheet for installed major equipment, fixtures, and appliances. If product data sheet is in the building owners' manual, manufacturer's manual may be attached to the appliance in lieu of inclusion in the building owners' manual.	Mandatory
(4) Maintenance checklist.	
(5) Information on local recycling and composting programs.	
(6) Information on available local utility programs that purchase a portion of energy from renewable energy providers.	
(7) Explanation of the benefits of using energy-efficient lighting systems [e.g., compact fluorescent light bulbs, light emitting diode (LED)] in high-usage areas.	
(8) A list of practices to conserve water and energy.	
(9) Information on the importance and operation of the home's fresh air ventilation system.	
(10) Local public transportation options.	
(11) A diagram showing the location of safety valves and controls for major building systems.	
(12) Where frost-protected shallow foundations are used, owner is informed of precautions including:	
(a) instructions to not remove or damage insulation when modifying landscaping.	
(b) providing heat to the building as required by the ICC IRC or IBC.	
(c) keeping base materials beneath and around the building free from moisture caused by broken water pipes or other water sources.	

GREEN BUILDING PRACTICES	POINTS
(13) A list of local service providers that offer regularly scheduled service and maintenance contracts to ensure proper performance of equipment and the structure (e.g., HVAC, water-heating equipment, sealants, caulks, gutter and downspout system, shower and/or tub surrounds, irrigation system).	
(14) A photo record of framing with utilities installed. Photos are taken prior to installing insulation, clearly labeled, and included as part of the building owners' manual.	
(15) List of common hazardous materials often used around the building and instructions for proper handling and disposal of these materials.	
(16) Information on organic pest control, fertilizers, deicers, and cleaning products.	
(17) Information on native landscape materials and/or those that have low water requirements.	
(18) Information on methods of maintaining the building's relative humidity in the range of 30 percent to 60 percent.	
(19) Instructions for inspecting the building for termite infestation.	
(20) Instructions for maintaining gutters and downspouts and importance of diverting water a minimum of 5 feet away from foundation.	
(21) A narrative detailing the importance of maintenance and operation in retaining the attributes of a green-built building.	
(22) Where stormwater management measures are installed on the lot, information on the location, purpose, and upkeep of these measures.	
(23) Explanation of and benefits from green cleaning in the home.	
(24) Retrofit energy calculator that provides baseline for future energy retrofits.	

1001.2 Training of homeowners. Homeowners are familiarized with the role of occupants in achieving green goals. On-site training is provided to the responsible party(ies) regarding equipment operation and maintenance, control systems, and occupant actions that will improve the environmental performance of the building. These include:

Mandatory

(1) HVAC filters.	TBD
(2) Thermostat operation and programming.	TBD
(3) Lighting controls.	TBD
(4) Appliances operation.	TBD
(5) Water heater settings and hot water use.	TBD
(6) Fan controls.	TBD
(7) Recycling and composting practices.	TBD

**1002
CONSTRUCTION, OPERATION, AND MAINTENANCE MANUALS AND TRAINING FOR
MULTI-UNIT BUILDINGS**

1002.0 Intent. Manuals are provided to the responsible parties (owner, management, tenant, and/or maintenance team) regarding the construction, operation, and maintenance of the building. Paper or

GREEN BUILDING PRACTICES	POINTS
<p>digital format manuals are to include information regarding those aspects of the building's construction, maintenance, and operation that are within the area of responsibilities of the respective recipient. One or more responsible parties are to receive a copy of all documentation for archival purposes.</p>	
<p>1002.1 Building construction manual. A building construction manual, including five or more of the following, is compiled and distributed in accordance with Section 1003.0. (Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	1
<p>(1) A narrative detailing the importance of constructing a green building, including a list of green building attributes included in the building. This narrative is included in all responsible parties' manuals.</p>	Mandatory
<p>(2) A local green building program certificate as well as a copy of the <i>National Green Building Standard™</i>, as adopted by the Adopting Entity, and the individual measures achieved by the building.</p>	Mandatory
<p>(3) Warranty, operation, and maintenance instructions for all equipment, fixtures, appliances, and finishes.</p>	Mandatory
<p>(4) Record drawings of the building.</p>	
<p>(5) A record drawing of the site including stormwater management plans, utility lines, landscaping with common name and genus/species of plantings.</p>	
<p>(6) A diagram showing the location of safety valves and controls for major building systems.</p>	
<p>(7) A list of the type and wattage of light bulbs installed in light fixtures.</p>	
<p>(8) A photo record of framing with utilities installed. Photos are taken prior to installing insulation and clearly labeled.</p>	
<p>1002.2 Operations manual. Operations manuals are created and distributed to the responsible parties in accordance with Section 1003.0. Between all of the operation manuals, five or more of the following options are included. (Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	1
<p>(1) A narrative detailing the importance of operating and living in a green building. This narrative is included in all responsible parties' manuals.</p>	Mandatory
<p>(2) A list of practices to conserve water and energy (e.g., turning off lights when not in use, switching the rotation of ceiling fans in changing seasons, purchasing ENERGY STAR appliances and electronics).</p>	Mandatory
<p>(3) Information on methods of maintaining the building's relative humidity in the range of 30 percent to 60 percent.</p>	
<p>(4) Information on opportunities to purchase renewable energy from local utilities or national green power providers and information on utility and tax incentives for the installation of on-site renewable energy systems.</p>	
<p>(5) Information on local and on-site recycling and hazardous waste disposal programs and, if applicable, building recycling and hazardous waste handling and disposal procedures.</p>	
<p>(6) Local public transportation options.</p>	

GREEN BUILDING PRACTICES	POINTS
(7) Explanation of the benefits of using compact fluorescent light bulbs, LEDs, or other high-efficiency lighting.	
(8) Information on native landscape materials and/or those that have low water requirements.	
(9) Information on the radon mitigation system, where applicable.	
(10) A procedure for educating tenants in rental properties on the proper use, benefits, and maintenance of green building systems including a maintenance staff notification process for improperly functioning equipment.	
(11) Information on the importance and operation of the building's fresh air ventilation system.	
<p>1002.3 Maintenance manual. Maintenance manuals are created and distributed to the responsible parties in accordance with Section 1003.0. Between all of the maintenance manuals, five or more of the following options are included.</p> <p style="text-align: center;">(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	1
(1) A narrative detailing the importance of maintaining a green building. This narrative is included in all responsible parties' manuals.	Mandatory
(2) A list of local service providers that offer regularly scheduled service and maintenance contracts to ensure proper performance of equipment and the structure (e.g., HVAC, water-heating equipment, sealants, caulks, gutter and downspout system, shower and/or tub surrounds, irrigation system).	
<p>(3) User-friendly maintenance checklist that includes:</p> <ul style="list-style-type: none"> (a) HVAC filters (b) thermostat operation and programming (c) lighting controls (d) appliances and settings (e) water heater settings (f) fan controls 	
(4) List of common hazardous materials often used around the building and instructions for proper handling and disposal of these materials.	
(5) Information on organic pest control, fertilizers, deicers, and cleaning products.	
(6) Instructions for maintaining gutters and downspouts and the importance of diverting water a minimum of 5 feet away from foundation.	
(7) Instructions for inspecting the building for termite infestation.	
(8) A procedure for rental tenant occupancy turnover that preserves the green features.	
(9) An outline of a formal green building training program for maintenance staff.	
(10) A green cleaning plan which includes guidance on sustainable cleaning products.	
<p>1002.4 Training of building owners. Building owners are familiarized with the role of occupants in achieving green goals. On-site training is provided to the responsible party(ies) regarding equipment operation and maintenance, control systems, and occupant actions that will improve the environmental performance of the building. These include:</p>	8Mandatory

GREEN BUILDING PRACTICES	POINTS
(1) HVAC filters	
(2) thermostat operation and programming	
(3) lighting controls	
(4) appliances operation	
(5) water heater settings and hot water use	
(6) fan controls	
(7) recycling and composting practices	

**1003
PUBLIC EDUCATION**

1003.0 Intent. Increase public awareness of the National Green Building Standard and projects constructed in accordance with National Green Building Standard to help increase demand for high-performance homes.

1003.1 Public Education. One or more of the following is implemented: **2 Max**

(1) Signage. Signs showing the project is designed and built in accordance with the National Green Building Standard are posted on the construction site.	1
(2) Certification Plaques. National Green Building Standard certification plaques with rating level attained are placed in a conspicuous location near the utility area of the home or, in a conspicuous location near the main entrance of a multifamily building.	1
(3) Education. A URL for the National Green Building Standard is included on site signage and marketing materials for homes certified under the National Green Building Standard.	1

~~1003.1 Signage.~~ Signs showing the project is designed and built in accordance with the National Green Building Standard are posted on the construction site. (X-points)

~~1003.2 Certification Plaques.~~ National Green Building Standard certification plaques with rating level attained are placed in a conspicuous location near the utility area of the home or, in a conspicuous location near the main entrance of a multifamily building. (X-points)

~~1003.3 Education.~~ A URL for the National Green Building Standard is included on site signage and marketing materials for homes certified under the National Green Building Standard. (X-points)

**1004
POST OCCUPANCY PERFORMANCE ASSESSMENT**

1004.0 Intent. A verification system for post occupancy assessment of the building is intended to be a management tool for the building owner to determine if energy or water usage have deviated from expected levels so that inspection and correction action can be taken.

<p>1004.1 A verification system plan is provided in the building owner’s manual (Sections 1001 or 1003). The verification system provides methods for demonstrating continued energy and water savings that are determined from the building’s initial year of occupancy of water and energy consumption as compared to annualized consumption at least every four years.</p>	<p>X-Points</p>
<p>(1) <u>Verification plan is developed to monitor post-occupancy energy and water use and is provided in the building owner’s manual.</u></p>	<p><u>1</u></p>
<p>(2) <u>Verification system is installed in the building to monitor post-occupancy energy and water use.</u></p>	<p><u>3</u></p>

**1005
INNOVATIVE PRACTICES**

1005.1 (Reserved)

CHAPTER 11

REMODELING

GREEN BUILDING PRACTICES	POINTS
<i>Note: Where applicable, section numbering in Chapter 11 parallels a corresponding practice in a previous chapter.</i>	
11.500 LOT DESIGN, PREPARATION, AND DEVELOPMENT	
11.500.0 Intent. This section applies to the lot and changes to the lot due to remodeling of an existing building.	
11.501 LOT SELECTION	
11.501.2 Multi-modal transportation. A range of multi-modal transportation choices are promoted by one or more of the following:	
(1) The building is located within one-half mile (805 m) of pedestrian access to a mass transit system.	6
(2) The building is located within five miles (8,046 m) of a mass transit station with provisions for parking.	3
(3) The building is located within one-half mile (805 m) of six or more community resources (e.g., recreational facilities (such as pools, tennis courts, basketball courts), parks, grocery store, post office, place of worship, community center, daycare center, bank, school, restaurant, medical/dental office, Laundromat/dry cleaner). No more than two each of the following use category can be counted toward the total: Recreation, Retail, Civic, and Services.	4
(4) The building is on a lot located within a community that has rights-of-way specifically dedicated to bicycle use in the form of paved paths or bicycle lanes, or is on an infill lot located within 1/2 mile of a bicycle lane designated by the jurisdiction.	5
(5) Dedicated bicycle parking and racks are constructed for mixed-use, multi-family buildings, and/or common areas:	
(a) Minimum of 1 bicycle parking space per 3 residential units	<u>2</u>
(b) Minimum of 1 bicycle parking space per 2 residential units	<u>4</u>
(c) Minimum of 1 bicycle parking space per 1 residential unit.	<u>6</u>
11.502 PROJECT TEAM, MISSION STATEMENT, AND GOALS	

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

11.502.1 Project team, mission statement, and goals. A knowledgeable team is established and team member roles are identified with respect to green lot design, preparation, and development. The project’s green goals and objectives are written into a mission statement.	4
---	----------

**11.503
LOT DESIGN**

<p>11.503.0 Intent. The lot is designed to avoid detrimental environmental impacts first, to minimize any unavoidable impacts, and to mitigate for those impacts that do occur. The project is designed to minimize environmental impacts and to protect, restore, and enhance the natural features and environmental quality of the lot.</p> <p style="text-align: right;">(Points awarded only if the intent of the design is implemented.)</p>

11.503.1 Natural resources. Natural resources are conserved by one or more of the following:	
(1) A natural resources inventory is completed under the direction of a qualified professional.	5
(2) A plan is implemented to conserve the elements identified by the natural resource inventory as high-priority resources.	6
(3) Items listed for protection in the natural resource inventory plan are protected under the direction of a qualified professional.	4
(4) Basic training in tree or other natural resource protection is provided for the on-site supervisor.	4
(5) All tree pruning on-site is conducted by a certified arborist or other qualified professional.	3
(6) Ongoing maintenance of vegetation on the lot during construction is in accordance with TCIA A300 or locally accepted best practices.	4
(7) Where a lot adjoins a landscaped common area, a protection plan from the remodeling construction activities next to the common area is implemented.	5

11.503.2 Slope disturbance. Slope disturbance is minimized by one or more of the following:	
(1) The use of terrain-adaptive architecture.	5
(2) Hydrological/soil stability study is completed and used to guide the design of any additions to buildings on the lot.	4
(3) All or a percentage of new driveways and parking are aligned with natural topography to reduce cut and fill.	
(a) 10 percent to 25 percent	3
(b) 25 percent to 75 percent	4
(c) greater than 75 percent	6
(4) Long-term erosion effects are reduced through the design and implementation of terracing, retaining walls, landscaping, or restabilization techniques.	5
(5) Underground parking uses the natural slope for parking entrances.	5

GREEN BUILDING PRACTICES		POINTS
11.503.3 Soil disturbance and erosion. Soil disturbance and erosion are minimized by one or more of the following: (also see Section 11.504.3)		
(1)	Remodeling construction activities are scheduled such that disturbed soil that is to be left unworked for more than 21 days is stabilized within 14 days.	5
(2)	The new utilities on the lot are designed to use one or more alternative means:	5
	(a) tunneling instead of trenching	
	(b) use of smaller (low ground pressure) equipment or geomats to spread the weight of construction equipment	
	(c) shared utility trenches or easements	
	(d) placement of utilities under paved surfaces instead of yards	
(3)	Limits of new clearing and grading are demarcated on the lot plan.	5

11.503.4 Stormwater Management. The stormwater management system is designed to use low impact development/green infrastructure practices to preserve, restore or mitigate changes in site hydrology due to land disturbance and the construction of impermeable surfaces through the use of one or more of the following techniques:

(1)	A site assessment is conducted and a plan prepared and implemented that identifies important existing permeable soils, natural drainage ways and other water features, e.g., depressional storage, onsite to be preserved in order to maintain site hydrology.	7
(2)	Low Impact Development/Green infrastructure stormwater management practices to promote infiltration and evapotranspiration such as, but not limited to, vegetated swales, bio-retention cells, vegetated tree boxes and planters, green roofs, and permeable pavements are used to manage rainfall on the lot and prevent the off-lot discharge of runoff from all storms up to and including the volume of following storm events:	
	(a) 80th percentile storm event	5
	(b) 90th percentile storm event	8
	(c) 95th percentile storm event	10
(3)	Permeable materials are used for driveways, parking areas, walkways, patios, and recreational surfaces and the like according to the following percentages:	
	(a) less than 25 percent	5
	(b) 25-50 percent	8
	(c) Greater than 50 percent	10

GREEN BUILDING PRACTICES		POINTS
<p>11.503.5 Landscape plan. A plan for the lot is developed to limit water and energy use while preserving or enhancing the natural environment.</p> <p>(Where "front" only or "rear" only plan is implemented, only half of the points (rounding down to a whole number) are awarded for Items (1)-(6))</p>		
(1)	A plan is formulated to protect, restore, or enhance natural vegetation on the lot.	6
	(a) 100 percent of the natural area	4
	(b) 50 percent of the natural area	3
	(c) 25 percent of the natural area	2
	(d) 12 percent of then natural area	1
(2)	Turf grass species, other vegetation, and trees that are native or regionally appropriate for local growing conditions are selected giving consideration to biodiversity and water use and specified on the lot plan. Non-invasive vegetation is selected.	4
(3)	Turf grass is integrated with maintenance tolerant, non-invasive flowering herbaceous plants in an amount to achieve not less than 10% of the groundcover. Plants should typically flower at less than 6 inches in height.	3
(4)	EPA WaterSense Water Budget Tool is used to determine the maximum percentage of turf areas.	2
(5)	Plants with similar watering needs are grouped (hydrozoning) and shown on the lot plan.	5
(6)	Summer shading by planting installed to shade a minimum of 30 percent of building walls. To conform to summer shading, the effective shade coverage (five years after planting) is the arithmetic mean of the shade coverage calculated at 10 am for eastward facing walls, noon for southward facing walls, and 3 pm for westward facing walls on the summer solstice.	5
(7)	Vegetative wind breaks or channels are designed to protect the lot and immediate surrounding lots as appropriate for local conditions.	4
(8)	Site- or community-generated tree trimmings or stump grinding of regionally appropriate trees are used on the site to provide protective mulch during construction or for landscaping.	3
(9)	An integrated pest management plan is developed to minimize chemical use in pesticides and fertilizers.	4
(10)	Developer has a plan for removal or containment of invasive plants from the disturbed areas of the site.	3
(11)	Developer has a plan for removal or containment of invasive plants on the undisturbed areas of the site.	6

REMODELING

GREEN BUILDING PRACTICES	POINTS
11.503.6 Wildlife habitat. Measures are planned to support wildlife habitat and include at least two of the following:	
(1) Plants and gardens that encourage wildlife, such as bird and butterfly gardens.	3
(2) Inclusion of a certified “backyard wildlife” program.	3
(3) The lot is adjacent to a wildlife corridor, fish and game park, or preserved areas and is designed with regard for this relationship.	3
(4) Outdoor lighting techniques are utilized with regard for wildlife.	3
11.503.7 Environmentally sensitive areas. The lot is in accordance with one or both of the following.	
(1) The lot does not contain any environmentally sensitive areas that are disturbed during remodeling.	4
(2) On lots with environmentally sensitive areas, mitigation and/or restoration is conducted to preserve ecosystem functions lost through remodeling activities.	4
11.504 LOT CONSTRUCTION	
11.504.0 Intent. Environmental impact during construction is avoided to the extent possible; impacts that do occur are minimized, and any significant impacts are mitigated.	
11.504.1 On-site supervision and coordination. On-site supervision and coordination is provided during on-lot-clearing, grading, trenching, paving, and installation of utilities to ensure that specified green development practices are implemented. (also see Section 11.503.3)	4
11.504.2 Trees and vegetation. Designated trees and vegetation are preserved by one or more of the following:	
(1) Fencing or equivalent is installed to protect trees and other vegetation.	3
(2) Trenching, significant changes in grade, and compaction of soil and critical root zones in all “tree save” areas as shown on the lot plan are avoided.	5
(3) Damage to designated existing trees and vegetation is mitigated during construction through pruning, root pruning, fertilizing, and watering.	4
11.504.3 Soil disturbance and erosion implementation. On-site soil disturbance and erosion during remodeling are minimized by one or more of the following in accordance with the SWPPP or applicable plan: (also see Section 11.503.3)	
(1) Sediment and erosion controls are installed on the lot and maintained in accordance with the stormwater pollution prevention plan, where required.	5
(2) Limits of clearing and grading are staked out on the lot.	5
(3) “No disturbance” zones are created using fencing or flagging to protect vegetation and sensitive areas on the lot from construction activity.	5

GREEN BUILDING PRACTICES		POINTS
(4)	Topsoil from either the lot or the site development is stockpiled and stabilized for later use and used to establish landscape plantings on the lot.	5
(5)	Soil compaction from construction equipment is reduced by distributing the weight of the equipment over a larger area (laying lightweight geogrids, mulch, chipped wood, plywood, OSB, metal plates, or other materials capable of weight distribution in the pathway of the equipment).	4
(6)	Disturbed areas on the lot that are complete or to be left unworked for 21 days or more are stabilized within 14 days using methods as recommended by the EPA, or in the approved SWPPP, where required.	3
(7)	Soil is improved with organic amendments and mulch.	3
(8)	Newly installed utilities on the lot are installed using one or more alternative means (e.g., tunneling instead of trenching, use of smaller equipment, use of low ground pressure equipment, use of geomats, shared utility trenches or easements).	5

**11.505
INNOVATIVE PRACTICES**

11.505.0 Intent. Innovative lot design, preparation and development practices are used to enhance environmental performance. Waivers or variances from local development regulations are obtained, and innovative zoning is used to implement such practices.

11.505.1 Driveways and parking areas. Driveways and parking areas are minimized or mitigated by one or more of the following:

(1)	Off-street parking areas are shared or driveways are shared. Waivers or variances from local development regulations are obtained to implement such practices, if required.	5
(2)	In a multi-unit project, parking capacity does not exceed the local minimum requirements.	5
(3)	Structured parking is utilized to reduce the footprint of surface parking areas.	
(a)	25 percent to less than 50 percent	4
(b)	50 percent to 75 percent	5
(c)	greater than 75 percent	6
(4)	Vegetative paving systems are utilized to reduce the footprint of surface driveways, fire lanes, streets or parking areas.	
(a)	10 percent to less than 25 percent	1
(b)	25 percent to 75 percent	2
(c)	Greater than 75 percent	3

11.505.2 Heat island mitigation. Heat island effect is mitigated by one or both of the following.

(1)	Hardscape: Not less than 50 percent of the surface area of the hardscape on the lot meets one or a combination of the following methods.	5
(a)	Shading of hardscaping: Shade is provided from existing or new vegetation (within five years) or from trellises. Shade of hardscaping is to be measured on the summer solstice at noon.	

GREEN BUILDING PRACTICES		POINTS
(b) Light-colored hardscaping: Horizontal hardscaping materials are installed with a solar reflectance index (SRI) of 29 or greater. The SRI is calculated in accordance with ASTM E1980. A default SRI value of 35 for new concrete without added color pigment is permitted to be used instead of measurements.		
(c) Permeable hardscaping: Permeable hardscaping materials are installed.		
(2) Roofs: Not less than 75 percent of the exposed surface of the roof is vegetated. Invasive plant species are not permitted.		5
11.505.3 Density. The average density on the lot on a net developable area basis is:		
(1) 7 to less than 14 dwelling units per acre (per 4,047 m ²)		54
(2) 14 to less than 21 dwelling units per acre (per 4,047 m ²)		85
(3) 21 to less than 35 dwelling units per acre (per 4,047 m ²)		116
(4) 35 to less than 70 dwelling units per acre (per 4,047 m ²)		147
(5) 70 or greater dwelling units per acre (per 4,047 m ²)		178
11.505.4 Mixed-use development. The lot contains a mixed-use building.		8
11.505.5 Community Garden(s). A portion of the lot is established as a community garden(s), available to residents of the lot, to provide for local food production to residents or area consumers.		3
11.505.6 Multi-Unit Plug-In Electric Vehicle Charging. Plug-in electric vehicle charging capability is provided for 1% of parking stalls. Electrical capacity in main electric panels supports Level 2 charging (208/240V-40 amp). Each stall is provided with conduit and wiring infrastructure from the electric panel to support Level 2 charging (208/240V-40 amp) service to the designated stalls, and stalls are equipped with either Level 2 charging AC grounded outlets (208/240V-40 amp) or Level 2 charging stations (240V/40A) by a third party charging station.		X4
11.601 QUALITY OF CONSTRUCTION MATERIALS AND WASTE		
11.601.0 Intent. Design and construction practices that minimize the environmental impact of the building materials are incorporated, environmentally efficient building systems and materials are incorporated, and waste generated during construction is reduced.		
11.601.1 Conditioned floor area. Finished floor area of a dwelling unit after the remodeling is limited. Finished floor area is calculated in accordance with NAHBRC Z765 for single family and ANSI/BOMA Z65.4 for multi-unit buildings. Only the finished floor area for stories above grade plane is included in the calculation.		
(1) Less than or equal to 700 square feet (65 m ²)		X14

GREEN BUILDING PRACTICES	POINTS
(2) less than or equal to 1,000 square feet (93 m ²)	15 <u>12</u>
(3) less than or equal to 1,500 square feet (139 m ²)	12 <u>9</u>
(4) less than or equal to 2,000 square feet (186 m ²)	9 <u>6</u>
(5) less than or equal to 2,500 square feet (232 m ²)	6 <u>3</u>
(6) greater than 4,000 square feet (372 m ²) (For every 100 square feet (9.29 m²) over 4,000 square feet (372 m²), one point is to be added the threshold points shown in Table 305.3.7 for each rating level.)	Mandatory
<i>Multi-Unit Building Note:</i> For a multi-unit building, a weighted average of the individual unit sizes is used for this practice.	

<p>11.601.2 Material usage. Newly installed structural systems are designed or construction techniques are implemented that reduce and optimize material usage.</p> <p style="text-align: center;">(Points awarded only when the newly installed portion of each structural system comprises at least 25 percent of the total area of that structural system after the remodel)</p>	9 Max
(1) Minimum structural member or element sizes necessary for strength and stiffness in accordance with advanced framing techniques or structural design standards are selected.	3
(2) Higher-grade or higher-strength of the same materials than commonly specified for structural elements and components in the building are used and element or component sizes are reduced accordingly.	3
(3) Performance-based structural design is used to optimize lateral force-resisting systems.	3

<p>11.601.3 Building dimensions and layouts. Building dimensions and layouts are designed to reduce material cuts and waste. This practice is used for a minimum of 80 percent of the newly installed areas:</p> <p style="text-align: center;">(Points awarded only when the newly installed area of the building comprises at least 25 percent of the total area of that element of the building after the remodel)</p>	
(1) floor area	3
(2) wall area	3
(3) roof area	3
(4) cladding or siding area	3
(5) penetrations or trim area	1

<p>11.601.4 Framing and structural plans. Detailed framing or structural plans, material quantity lists and on-site cut lists for newly installed framing, structural materials, and sheathing materials are provided.</p>	4
---	----------

<p>11.601.5 Prefabricated components. Precut or preassembled components, or panelized or precast assemblies are utilized for a minimum of 90 percent for the following system or building:</p> <p style="text-align: center;">(Points awarded only when the newly installed system comprises at least 25 percent of the total area of that system of the building after the remodel)</p>	13 Max
(1) floor system	4
(2) wall system	4

REMODELING

GREEN BUILDING PRACTICES	POINTS
(3) roof system	4
(4) modular construction for any new construction located above grade	13
11.601.6 Stacked stories. Stories above grade are stacked, such as in 1½-story, 2-story, or greater structures. The area of the upper story is a minimum of 50 percent of the area of the story below, based on areas with a minimum ceiling height of 7 feet (2,134 mm).	8 Max
(1) first stacked story	4
(2) for each additional stacked story	2
11.601.7 Prefinished materials. Prefinished building materials or assemblies listed below have no additional site-applied finishing material are installed.	12 Max
<ul style="list-style-type: none"> a) interior trim not requiring paint or stain b) exterior trim not requiring paint or stain c) window, skylight, and door assemblies not requiring paint or stain on one of the following surfaces: <ul style="list-style-type: none"> i. exterior surfaces ii. interior surfaces d) interior wall coverings or systems, floor systems, and/or ceiling systems not requiring paint or stain or other type of finishing application e) exterior wall coverings or systems, floor systems, and/or ceiling systems not requiring paint or stain or other type of finishing application 	
(1) 90 percent or more (after the remodel) of the installed building materials or assemblies listed above: (Points awarded for each type of material or assembly.)	5
(2) 50 percent to less than 90 percent (after the remodel) of the installed building material or assembly listed above: (Points awarded for each type of material or assembly.)	2
(3) 35 percent to less than 50 percent (after the remodel) of the installed building material or assembly listed above: (Points awarded for each type of material or assembly.)	1
11.601.8 Foundations. A foundation system that minimizes soil disturbance, excavation quantities and material usage, such as frost-protected shallow foundations, isolated pier and pad foundations, deep foundations, post foundations, or helical piles is selected, designed, and constructed. The foundation is used on 25 percent or more of the building footprint after the remodel.	3

11.602 ENHANCED DURABILITY AND REDUCED MAINTENANCE

11.602.0 Intent. Design and construction practices are implemented that enhance the durability of materials and reduce in-service maintenance.

GREEN BUILDING PRACTICES	POINTS
11.602.1 Moisture Management – Building Envelope	
11.602.1.1 Capillary breaks	
<p>11.602.1.1.1 A capillary break and vapor retarder are installed at concrete slabs in accordance with IRC Sections R506.2.2 and R506.2.3 or IBC Sections 1910 and 1805.4.1.</p> <p>This practice is not mandatory for existing slabs without apparent moisture problem.</p>	Mandatory
<p>11.602.1.1.2 A capillary break to prevent moisture migration into foundation wall is provided between the footing and the foundation wall on all new foundations, and on not less than 25 percent of the total length of the foundation after the remodel.</p>	3
<p>11.602.1.2 Foundation waterproofing. Enhanced foundation waterproofing is installed on all new foundations, and on not less than 25 percent of the total length of the foundation after the remodel using one or both of the following:</p>	4
(1) rubberized coating, or	
(2) drainage mat	
11.602.1.3 Foundation drainage.	
<p>11.602.1.3.1 Where required by the ICC IRC or IBC for habitable and usable spaces below grade, exterior drain tile is installed.</p> <p>This practice is not mandatory for existing space without apparent moisture problem.</p>	Mandatory
<p>11.602.1.3.2 Interior and exterior foundation perimeter drains are installed and sloped to discharge to daylight, dry well, or sump pit on all new foundations and not less than 25 percent of the total length of the foundation after the remodel.</p>	4
11.602.1.4 Crawlspace.	
<p>11.602.1.4.1 Vapor retarder for all new unconditioned vented crawlspace foundations and not less than 25 percent of the total area after the remodel is in accordance with the following, as applicable. Joints of vapor retarder overlap a minimum of 6 inches (152 mm) and are taped.</p>	
(1) Floors. Minimum 6 mil vapor retarder installed on the crawlspace floor and extended at least 6 inches up the wall and is attached and sealed to the wall.	6
<p>(2) Walls. Dampproof walls are provided below finished grade.</p> <p>This practice is not mandatory for existing walls without apparent moisture problem.</p>	Mandatory
<p>11.602.1.4.2 For all new foundations and not less than 25 percent of the total area of the crawlspace after the remodel, crawlspace that is built as a conditioned area is sealed to prevent outside air infiltration and provided with conditioned air at a rate not less than 0.02 cfm (.009 L/s) per square foot of horizontal area and one of the following is implemented:</p>	

REMODELING

GREEN BUILDING PRACTICES		POINTS
(1)	a concrete slab over 6 mil polyethylene sheeting or other Class I vapor retarder installed in accordance with Section 408.3 or Section 506 of the International Residential Code.	8
(2)	6 mil polyethylene sheeting or other Class I vapor retarder installed in accordance with Section 408.3 or Section 506 of the International Residential Code. This practice is not mandatory for existing foundations without apparent moisture problem.	Mandatory
11.602.1.5 Termite barrier. Continuous physical foundation termite barrier provided in accordance as follows:		4
(1)	In geographic areas that have slight to moderate infestation potential in accordance with Figure 6(3) a continuous physical barrier is used.	4
(2)	In geographic areas that have moderate to heavy or very heavy infestation potential in accordance with figure 6(3), a continuous physical barrier used with no or low toxicity treatment is installed.	<u>4</u>
(3)	In geographic areas that have a moderate to heavy or very heavy a low toxicity bait and kill termite treatment plan is selected and implemented.	<u>4</u>
11.602.1.6 Termite-resistant materials. In areas of termite infestation probability as defined by Figure 6(3), termite-resistant materials are used as follows:		
(1)	In areas of slight to moderate termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings within the first 2 feet (610 mm) above the top of the foundation.	2
(2)	In areas of moderate to heavy termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings within the first 3 feet (914 mm) above the top of the foundation.	4
(3)	In areas of very heavy termite infestation probability: for the foundation, all structural walls, floors, concealed roof spaces not accessible for inspection, exterior decks, and exterior claddings.	6
11.602.1.7 Moisture control measures		
11.602.1.7.1 Moisture control measures are in accordance with the following:		
(1)	Building materials with visible mold are not installed or are cleaned or encapsulated prior to concealment and closing.	2
(2)	Insulation in cavities is dry in accordance with manufacturer's instructions when enclosed (e.g., with drywall).	Mandatory 2
(3)	The moisture content of lumber is sampled to ensure it does not exceed 19 percent prior to the surface and/or cavity enclosure.	4
11.602.1.7.2 Moisture content of subfloor, substrate, or concrete slabs is in accordance with the appropriate industry standard for the finish flooring to be applied.		2
11.602.1.7.3 Building envelope assemblies that are designed for moisture control based on documented hygrothermal simulation or field study analysis. Hygrothermal analysis is required		4

GREEN BUILDING PRACTICES	POINTS
to incorporate representative climatic conditions, interior conditions and include heating and cooling seasonal variation.	
11.602.1.8 Water-resistive barrier. Where required by the ICC IRC or IBC, a water-resistive barrier and/or drainage plane system is installed behind newly installed exterior veneer and/or siding and where there is evidence of a moisture problem.	Mandatory
<p>11.602.1.9 Flashing. Flashing is provided as follows to minimize water entry into wall and roof assemblies and to direct water to exterior surfaces or exterior water-resistive barriers for drainage. Flashing details are provided in the construction documents and are in accordance with the fenestration manufacturer’s instructions, the flashing manufacturer’s instructions, or as detailed by a registered design professional.</p> <p style="text-align: center;">Points awarded only when practices (2)-(7) are implemented in all newly installed construction and not less than 25 percent of the applicable building elements for the entire building after the remodel.</p>	
<p>(1) Flashing is installed at all of the following locations, as applicable:</p> <ul style="list-style-type: none"> (a) around exterior fenestrations, skylights and doors (b) at roof valleys (c) at all building-to-deck, -balcony, -porch, and -stair intersections (d) at roof-to-wall intersections, at roof-to-chimney intersections, at wall-to-chimney intersections, and at parapets. (e) at ends of and under masonry, wood, or metal copings and sills (f) above projecting wood trim (g) at built-in roof gutters, and (h) drip edge is installed at eaves and rake edges. <p style="text-align: center;">These practices are not mandatory for existing building elements without apparent moisture problem.</p>	Mandatory
(2) All window and door head and jamb flashing is either self-adhered flashing complying with AAMA 711-07 or liquid applied flashing installed in accordance with flashing manufacturer’s installation instructions.	2
(3) Pan flashing is installed at sills of all exterior windows and doors	3
(4) Seamless, preformed kickout flashing, or prefabricated metal with soldered seams is provided at all roof-to-wall intersections. The type and thickness of the material used for roof flashing including but not limited kickout and step flashing is commensurate with the anticipated service life of the roofing material.	3
(5) A rainscreen wall design as follows is used for exterior wall assemblies	4 Max
(a) a system designed with minimum ¼-inch air space exterior to the water-resistive barrier, vented to the exterior at top and bottom of the wall and integrated with flashing details, or	4
(b) a cladding material or a water-resistive barrier with enhanced drainage, meeting 75 percent drainage efficiency determined in accordance with ASTM E2273.	2
(6) Through-wall flashing is installed at transitions between wall cladding materials, or wall construction types.	2

GREEN BUILDING PRACTICES	POINTS												
(7) Flashing is installed at expansion joints in stucco walls	2												
<p>11.602.1.10 Exterior doors. Entries at exterior door assemblies, inclusive of side lights (if any), are covered by one of the following methods to protect the building from the effects of precipitation and solar radiation. Either a storm door or a projection factor of 0.375 minimum is provided. Eastern- and western-facing entries in Climate Zones 1, 2, and 3, as determined in accordance with Figure 6(1) or Appendix C, have either a storm door or a projection factor of 1.0 minimum, unless protected from direct solar radiation by other means (e.g., screen wall, vegetation).</p> <p>(a) installing a porch roof or awning</p> <p>(b) extending the roof overhang</p> <p>(c) recessing the exterior door</p> <p>(d) Installing a storm door</p>	<p>2 per exterior door</p> <p>6 Max</p>												
<p>11.602.1.11 Tile backing materials. Tile backing materials installed under tiled surfaces in wet areas are in accordance with ASTM C1178, C1278, C1288, or C1325.</p> <p style="text-align: right;">This practice is not mandatory for existing tile surfaces without apparent moisture problem.</p>	Mandatory												
<p>11.602.1.12 Roof overhangs. Roof overhangs, in accordance with Table 11.602.1.12, are provided over a minimum of 90 percent of exterior walls to protect the building envelope.</p> <p style="text-align: center;">Table 11.602.1.12 Minimum Roof Overhang for One- & Two-Story Buildings</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Inches of Rainfall ⁽¹⁾</th> <th>Eave Overhang (Inches)</th> <th>Rake Overhang (Inches)</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">≤40</td> <td style="text-align: center;">12</td> <td style="text-align: center;">12</td> </tr> <tr> <td style="text-align: center;">>41 and ≤70</td> <td style="text-align: center;">18</td> <td style="text-align: center;">12</td> </tr> <tr> <td style="text-align: center;">>70</td> <td style="text-align: center;">24</td> <td style="text-align: center;">12</td> </tr> </tbody> </table> <p><small>(1) Annual mean total rainfall in inches is in accordance with Figure 6(2). For SI: 12 inches = 304.8 mm</small></p>	Inches of Rainfall ⁽¹⁾	Eave Overhang (Inches)	Rake Overhang (Inches)	≤40	12	12	>41 and ≤70	18	12	>70	24	12	4
Inches of Rainfall ⁽¹⁾	Eave Overhang (Inches)	Rake Overhang (Inches)											
≤40	12	12											
>41 and ≤70	18	12											
>70	24	12											
<p>11.602.1.13 Ice barrier. In areas where there has been a history of ice forming along the eaves causing a backup of water, an ice barrier is installed in accordance with the ICC IRC or IBC at roof eaves of pitched roofs and extends a minimum of 24 inches (610 mm) inside the exterior wall line of the building.</p>	Mandatory												
<p>11.602.1.14 Architectural features. Architectural features that increase the potential for the water intrusion are avoided:</p> <p>(1) All horizontal ledgers are sloped away to provide gravity drainage as appropriate for the application.</p> <p>(2) No roof configurations that create horizontal valleys in roof design.</p> <p>(3) No recessed windows and architectural features that trap water on horizontal surfaces.</p>	<p>Mandatory</p> <p>1</p> <p>2</p> <p>2</p>												

GREEN BUILDING PRACTICES	POINTS
<p>11.602.2 Roof surfaces. A minimum of 90 percent of roof surfaces, not used for roof penetrations and associated equipment, on-site renewable energy systems such as photovoltaics or solar thermal energy collectors, or rooftop decks, amenities and walkways, are constructed of one or more of the following:</p>	3
<p>(1) products that are in accordance with the ENERGY STAR® cool roof certification or equivalent</p>	
<p>(2) a vegetated roof system</p>	
<p>(3) Minimum initial SRI of 78 for low-sloped roof (a slope less than 2:12) and a minimum initial SRI of 29 for a steep-sloped roof (a slope equal to or greater than 2:12). The SRI is calculated in accordance with ASTM E1980. Roof products are certified and labeled.</p>	
<p>11.602.3 Roof water discharge. A gutter and downspout system or splash blocks and effective grading are provided to carry water a minimum of 5 feet (1524 mm) away from perimeter foundation walls.</p>	4
<p>11.602.4 Finished grade.</p>	
<p>11.602.4.1 Finished grade at all sides of a building is sloped to provide a minimum of 6 inches (150 mm) of fall within 10 feet (3048 mm) of the edge of the building. Where lot lines, walls, slopes, or other physical barriers prohibit 6 inches (152 mm) of fall within 10 feet (3048 mm), the final grade is sloped away from the edge of the building at a minimum slope of 2 percent.</p>	Mandatory
<p>11.602.4.2 The final grade is sloped away from the edge of the building at a minimum slope of 5 percent.</p>	1
<p>11.602.4.3 Water is directed to drains or swales to ensure drainage away from the structure.</p>	1
<p>11.603 REUSED OR SALVAGED MATERIALS</p>	
<p>11.603.0 Intent. Practices that reuse or modify existing structures, salvage materials for other uses, or use salvaged materials in the building's construction are implemented.</p>	
<p>11.603.1 Reuse of existing building. Major elements or components of existing buildings and structures are reused, modified, or deconstructed for later use. (Points awarded for every 200 square feet (18.5 m²) of floor area.)</p>	1 12 Max
<p>11.603.2 Salvaged materials. Reclaimed and/or salvaged materials and components are used. The total material value and labor cost of salvaged materials is equal to or exceeds 1 percent of the total construction cost. (Points awarded per 1% of salvaged materials used based on the total construction cost.) (Materials, elements, or components awarded points under Section 11.603.1 shall not be awarded points under Section 11.603.2.)</p>	1 9 Max

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

11.603.3 Scrap materials. Sorting and reuse of scrap building material is facilitated (e.g., a central storage area or dedicated bins are provided).	4
---	----------

**11.604
RECYCLED-CONTENT BUILDING MATERIALS**

11.604.1 Recycled content. Building materials with recycled content are used for two minor and/or two major components of the building.	Per Table 11.604.1												
Table 11.604.1 Recycled Content													
<table border="1" style="margin: auto; border-collapse: collapse;"> <thead> <tr> <th style="background-color: #cccccc;">Material Percentage Recycled Content</th> <th style="background-color: #cccccc;">Points For 2 Minor</th> <th style="background-color: #cccccc;">Points For 2 Major</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">25% to less than 50%</td> <td style="text-align: center;">1</td> <td style="text-align: center;">2</td> </tr> <tr> <td style="text-align: center;">50% to less than 75%</td> <td style="text-align: center;">2</td> <td style="text-align: center;">4</td> </tr> <tr> <td style="text-align: center;">more than 75%</td> <td style="text-align: center;">3</td> <td style="text-align: center;">6</td> </tr> </tbody> </table>		Material Percentage Recycled Content	Points For 2 Minor	Points For 2 Major	25% to less than 50%	1	2	50% to less than 75%	2	4	more than 75%	3	6
Material Percentage Recycled Content	Points For 2 Minor	Points For 2 Major											
25% to less than 50%	1	2											
50% to less than 75%	2	4											
more than 75%	3	6											

**11.605
RECYCLED CONSTRUCTION WASTE**

11.605.0 Intent. Waste generated during construction is recycled. All waste classified as hazardous is properly handled and disposed of.

11.605.1 Hazardous Waste. The construction waste management plan shall include information on the proper handling and disposal of hazardous waste. All hazardous waste is properly handled and disposed of.	Mandatory
--	------------------

11.605.2 Construction waste management plan. A construction waste management plan is developed, posted at the jobsite, and implemented diverting, through reuse, salvage or recycling a minimum of 50 percent (by weight) of nonhazardous construction and demolition waste, excluding land-clearing waste, from disposal. Materials used as alternative daily cover are considered construction waste and do not count toward recycling or salvaging.	6
For remodeling projects or demolition of an existing facility by a EPA certified E-Waste recycling facility, the waste management plan includes the recycling of 95% of electronic waste components (such as printed circuit boards from computers, building automation systems, HVAC, fire and security control boards).	
Exceptions:	
1) Waste materials generated from land clearing, soil and sub-grade excavation and all manner of vegetative debris shall not be in the calculations.	
2) A recycling facility (traditional or E-Waste) offering material receipt documentation is not available within 50 miles of the jobsite.	

GREEN BUILDING PRACTICES	POINTS
<p>11.605.3 On-site recycling. On-site recycling measures following applicable regulations and codes are implemented, such as the following:</p> <ul style="list-style-type: none"> (a) Materials are ground or otherwise safely applied on-site as soil amendment or fill. A minimum of 50 percent (by weight) of construction and land-clearing waste is diverted from landfill. (b) Alternative compliance methods approved by the Adopting Entity. (c) Compatible untreated biomass material (lumber, posts, beams etc.) are set aside for combustion if a Solid Fuel Burning Appliance per Section 11.901.2.1(2) will be available for on-site renewable energy. 	7
<p>11.605.4 Recycled construction materials. Construction materials (e.g., wood, cardboard, metals, drywall, plastic, asphalt roofing shingles, or concrete) are recycled offsite.</p>	6 Max
(1) a minimum of two types of materials are recycled	3
(2) for each additional recycled material type	1

**11.606
RENEWABLE MATERIALS**

11.606.0 Intent. Building materials derived from renewable resources are used.

<p>11.606.1 Biobased products. The following biobased products are used:</p> <ul style="list-style-type: none"> (a) certified solid wood in accordance with Section 11.606.2 (b) engineered wood (c) bamboo (d) cotton (e) cork (f) straw (g) natural fiber products made from crops (soy-based, corn-based) (h) other biobased materials with a minimum of 50 percent biobased content (by weight or volume) 	8 Max
(1) Two types of biobased materials are used, each for more than 0.5 percent of the project's projected building material cost.	3
(2) Two types of biobased materials are used, each for more than 1 percent of the project's projected building material cost.	6
(3) For each additional biobased material used for more than 0.5 percent of the project's projected building material cost.	1 2 Max

REMODELING

GREEN BUILDING PRACTICES		POINTS
<p>11.606.2 Wood-based products. Wood or wood-based products are certified to the requirements of one of the following recognized product programs:</p>		
(a)	American Forest Foundation's <i>American Tree Farm System</i> ® (ATFS)	
(b)	Canadian Standards Association's <i>Sustainable Forest Management System Standards</i> (CSA Z809)	
(c)	<i>Forest Stewardship Council</i> (FSC)	
(d)	<i>Program for Endorsement of Forest Certification Systems</i> (PEFC)	
(e)	<i>Sustainable Forestry Initiative</i> ® Program (SFI)	
(f)	<i>National Wood Flooring Association's Responsible Procurement Program</i> (RPP)	
(g)	other product programs mutually recognized by PEFC	
(1)	A minimum of two certified wood-based products are used for minor components of the building.	3
(2)	A minimum of two certified wood-based products are used in major components of the building.	4

<p>11.606.3 Manufacturing energy. Materials are used for major components of the building that are manufactured using a minimum of 33 percent of the primary manufacturing process energy derived from renewable sources, combustible waste sources, or renewable energy credits (RECs).</p> <p style="text-align: right;">(2 points awarded per material.)</p>	6 Max
---	--------------

**11.607
RECYCLING AND WASTE REDUCTION**

<p>11.607.1 Recycling and composting. Recycling and composting by the occupant are facilitated by one or more of the following methods:</p>		
(1)	A built-in collection space in each kitchen and an aggregation/pick-up space in a garage, covered outdoor space, or other area for recycling containers is provided.	3
(2)	Compost facility is provided on the site.	3

<p>11.607.2 Food waste disposers. A minimum of one food waste disposer is installed at the primary kitchen sink.</p>	1
---	---

**11.608
RESOURCE-EFFICIENT MATERIALS**

<p>11.608.1 Resource-efficient materials. Products containing fewer materials are used to achieve the same end-use requirements as conventional products, including but not limited to:</p>		9 Max 3 per each material
(1)	lighter, thinner brick with bed depth less than 3 inches and/or brick with coring of more than 25 percent	
(2)	engineered wood or engineered steel products	

GREEN BUILDING PRACTICES	POINTS
(3) roof or floor trusses	
11.609 REGIONAL MATERIALS	
11.609.1 Regional materials. Regional materials are used for major and/or minor components of the building.	10 Max 2 per each major component and 1 per each minor component
(For a component to comply with this practice, a minimum of 75% of all products in that component category must be sourced regionally, e.g., stone veneer category – 75 percent or more of the stone veneer on a project must be sources regionally.)	
11.610 LIFE CYCLE ASSESMENT	
11.610.1 Life cycle assesment. A life cycle assessment (LCA) tool is used to select environmentally preferable products, assemblies, or , entire building designs. Points are awarded in accordance with Section 11.610.1.1 or 11.610.1.2. Only one method of analysis or tool may be utilized. A reference service life for the building is 60 years for any life cycle analysis tool. Results of the LCA are reported in the manual required in Section 1001.1 or 11.1003.1(1) of this Standard in terms of the environmental impacts listed in this practice and it states if operating energy was included in the LCA.	15 Max
11.610.1.1 Whole-building life cycle assessment. A whole-building LCA is performed in conformance with ASTM E-2921 using ISO14044 compliant life cycle assessment.	15
(1) Execute LCA at the whole building level through a comparative analysis between the final and reference building designs as set forth under Standard Practice, ASTM E-2921. The assessment criteria includes the following environmental impact categories:	
(a) Primary energy use	
(b) Global warming potential	
(c) Acidification potential	
(d) Eutrophication potential	
(e) Ozone depletion potential	
(f) Smog potential	8
(2) Execute LCA on regulated loads throughout the building operations life cycle stage. Conduct simulated energy performance analyses in accordance with Section 702.2.1 ICC IECC analysis (IECC Section 405) in establishing the comparative performance of final versus reference building designs. Primary energy use savings and global warming potential avoidance from simulation analyses results are determined using EPA NERC electricity generation and other fuels energy conversion factors and	5

GREEN BUILDING PRACTICES		POINTS						
	electricity generation and other fuels emission rates for the Sub-Region in which the building is located							
(3)	Execute full LCA, including use-phase, through calculation of operating energy impacts (c) – (f) using EPA NERC regional emissions factors [provide full reference to NERC document or provide factor tables].	2						
11.610.1.2 Life cycle assessment for a product or assembly. An environmentally preferable product or assembly is selected for an application based upon the use of an LCA tool that incorporates data methods compliant with ISO 14044 or other recognized standards that compare the environmental impact of products or assemblies.		10 Max						
11.610.1.2.1 Product LCA. A product with improved environmental impact measures compared to another product(s) intended for the same use is selected. The environmental impact measures used in the assessment are selected from the following:		Per Table 11.610.1.2.1 10 Max						
<p>(a) Primary energy use</p> <hr/> <p>(b) Global warming potential</p> <hr/> <p>(c) Acidification potential</p> <hr/> <p>(d) Eutrophication potential</p> <hr/> <p>(e) Ozone depletion potential</p> <hr/> <p>(f) Smog potential</p>								
<p>(Points awarded for each product/system comparison where the selected product/system improved upon the environmental impact measures by an average of 15 percent.)</p>								
<p>Table 11.610.1.2.1 Product LCA</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: center;">4 Impact Measures</th> <th style="text-align: center;">5 Impact Measures</th> </tr> </thead> <tbody> <tr> <td colspan="2" style="text-align: center;">POINTS</td> </tr> <tr> <td style="text-align: center;">2</td> <td style="text-align: center;">3</td> </tr> </tbody> </table>		4 Impact Measures	5 Impact Measures	POINTS		2	3	
4 Impact Measures	5 Impact Measures							
POINTS								
2	3							
11.610.1.2.2 Assembly LCA. An assembly with improved environmental impact measures compared to a functionally comparable assembly is selected. The full life cycle, from resource extraction to demolition and disposal (including but not limited to on-site construction, maintenance and replacement, material and product embodied acquisition, and process and transportation energy), is assessed. The assessment does not include electrical and mechanical equipment and controls, plumbing products, fire detection and alarm systems, elevators, and conveying systems. The following functional building elements are eligible for points under this practice:		Per Table 11.610.1.2.2 10 Max						
<p>(a) exterior walls</p> <hr/> <p>(b) roof/ceiling</p> <hr/> <p>(c) interior walls or ceilings</p> <hr/> <p>(d) intermediate floors</p>								

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

The environmental impact measures used in the assessment are selected from the following:

- (a) Primary energy use
- (b) Global warming potential
- (c) Acidification potential
- (d) Eutrophication potential
- (e) Ozone depletion potential
- (f) Smog potential

(Points are awarded based on the number of functional building elements that improve upon environmental impact measures by an average of 15 percent.)

**Table 11.610.1.2.2
Assembly LCA**

	4 Impact Measures	5 Impact Measures

3 functional building elements	4	8
4 functional building elements	5	10

**11.611
INNOVATIVE PRACTICES**

<p>11.611.1 Manufacturer’s environmental management system concepts. Product manufacturer’s operations and business practices include environmental management system concepts, and the production facility is registered to ISO 14001 or equivalent. The aggregate value of building products from registered ISO 14001 or equivalent production facilities is 1 percent or more of the estimated total building materials cost.</p> <p style="text-align: right;">(1 point awarded per percent.)</p>	10 Max
--	---------------

<p>11.611.2 Sustainable products. One or more of the following products are used for at least 30% of the floor or wall area of the entire dwelling unit, as applicable. Products are certified by a third-party agency accredited to ISO Guide 65.</p>	9 Max
<p>(1) 50% or more of carpet installed (by square feet) is certified to NSF 140.</p>	3
<p>(2) 50% or more of resilient flooring installed (by square feet) is certified to NSF 332.</p>	3
<p>(3) 50% or more of the insulation installed (by square feet) is certified to EcoLogo CCD-016.</p>	3
<p>(4) 50% or more of interior wall coverings installed (by square feet) is certified to NSF 342</p>	3
<p>(5) 50% or more of the gypsum board installed (by square feet) is certified to UL 100.</p>	3
<p>(6) 50% or more of the door leaves installed (by number of door leaves) is certified to UL 102.</p>	3
<p>(7) 50% or more of the tile installed (by square feet) is certified to TCNA A138.1 Specifications for Sustainable Ceramic Tiles, Glass Tiles and Tile Installation Materials.</p>	3

GREEN BUILDING PRACTICES	POINTS
11.611.3 Universal design elements. Dwelling incorporates one or more of the following universal design elements. Conventional industry tolerances are permitted.	10-12 Max
(1) Any no-step entrance into the dwelling which (1) is accessible from a substantially level parking or drop-off area (no more than 2%) via an accessible path which has no individual change in elevation or other obstruction of more than 1-1/2 inches in height with the pitch not exceeding 1 in 12 and (2) provides a minimum 32-inch wide clearance into the dwelling.	3
(2) Minimum 36-inch wide accessible route from the no-step entrance into at least one visiting room in the dwelling and into at least one full or half bathroom which has a minimum 32 inch clear door width and a 30-inch by 48-inch clear area inside the bathroom outside the door swing.	3
(3) Minimum 36-inch-wide accessible route from the no-step entrance into at least one bedroom which has a minimum 32-inch clear door width.	3
(4) Blocking or equivalent installed in the accessible bathroom walls for future installation of grab bars at water closet and bathing fixture, if applicable.	1
(5) All interior and exterior door handles are levers rather than knobs.	1
(6) All sink faucet controls are single-handle controls of both volume and temperature.	1
(7) Interior convenience power receptacles, communication connections (for cable, phone, Ethernet, etc.) and switches are placed between 15” and 48” above the finished floor. Additional switches to control devices and systems (such as alarms, home theaters and other equipment) not required by the local building code may be installed as desired.	1
(8) All light switches are rocker-type switches or other similar switches that can be operated by pressing them (with assistive devices) – no toggle-type switches may be used.	1
(9) Anyone of the following can be controlled with a (wireless) mobile device such as a smartphone, tablet or laptop computer: HVAC, lighting, alarm system or door locks	1

11.611.4 Product declarations. A minimum of 10 different products installed in the building project, at the time of certificate of occupancy, comply with one of the following sub-sections. Declarations, reports, and assessments are submitted to the Adopting Entity and contain documentation of the critical peer review by an independent third party, results from the review, the reviewer’s name, company name, contact information, and date of the review.

5

11.611.4.1 Industry-wide declaration. A Type III industry-wide environmental product declaration (EPD) is submitted for each product. Where the program operator explicitly recognizes the EPD as representative of the product group on a National level, it is considered industry-wide. In the case where an industry-wide EPD represents only a subset of an industry group, as opposed to being industry-wide, the manufacturer is required be explicitly recognized as a participant by the EPD program operator. All EPDs are required to be consistent with ISO Standards 14025 and 21930 with at least a cradle-to-gate scope.
(Each product complying with Section 11.611.4.1 shall be counted as one product for compliance with Section 11.611.4.)

11.611.4.2 Product Specific Declaration. A product specific Type III EPD are submitted for each product. The product specific declaration shall be manufacturer specific for an individual product or product family. All Type III EPDs are required to be certified as complying, at a minimum, with the goal and scope for the cradle-to-gate requirements in accordance with ISO Standards 14025 and 21930.

GREEN BUILDING PRACTICES	POINTS
(Each product complying with Section 11.611.4.2 shall be counted as two products for compliance with Section 11.611.4.)	
11.701 MINIMUM ENERGY EFFICIENCY REQUIREMENTS	
11.701.4 Mandatory practices.	
<p>11.701.4.0 Minimum Energy Efficiency Requirements. Additions, alterations, or renovations to an existing building, building system or portion thereof comply with the provisions of the International Energy Conservation Code as they relate to new construction without requiring the unaltered portion(s) of the existing building or building system to comply with this code. An addition complies with the IECC if the addition complies or if the existing building and addition comply with the IECC as a single building.</p>	Mandatory
11.701.4.1 HVAC systems.	
<p>11.701.4.1.1 HVAC system sizing. Newly installed or modified space heating and cooling system is sized according to heating and cooling loads calculated using ACCA Manual J, or equivalent. New equipment is selected using ACCA Manual S or equivalent.</p>	Mandatory
<p>11.701.4.1.2 Radiant and hydronic space heating. Where installed as a primary heat source in the building, new radiant or hydronic space heating system is designed, installed, and documented, using industry-approved guidelines and standards (e.g., ACCA Manual J, AHRI I=B=R, ANSI/ACCA 5 QI-2010, or an accredited design professional's and manufacturer's recommendations).</p>	Mandatory
11.701.4.2 Duct systems.	
<p>11.701.4.2.1 Duct air sealing. Newly installed, modified, or ducts that are exposed during the remodel are air sealed. All duct sealing materials are in conformance with UL 181A or UL 181B specifications and are installed in accordance with manufacturer's instructions.</p>	Mandatory
<p>11.701.4.2.2 Ducts and plenums. Building framing cavities are not used as ducts or plenums. Existing building cavities currently used as supply ducts exposed during the remodel are lined.</p>	Mandatory
<p>11.701.4.2.3 Duct system sizing. New or modified Duct system is sized and designed in accordance with ACCA Manual D or equivalent.</p>	Mandatory
11.701.4.3 Insulation and air sealing.	
<p>11.701.4.3.1 Building Thermal Envelope Air Sealing. The building thermal envelope exposed or created during the remodel is durably sealed to limit infiltration. The sealing methods between dissimilar materials allow for differential expansion and contraction. The following are caulked, gasketed, weather-stripped or otherwise sealed with an air barrier material, suitable film or solid material:</p>	Mandatory

GREEN BUILDING PRACTICES	POINTS
<ul style="list-style-type: none"> (a) All joints, seams and penetrations. (b) Site-built windows, doors and skylights. (c) Openings between window and door assemblies and their respective jambs and framing. (d) Utility penetrations. (e) Dropped ceilings or chases adjacent to the thermal envelope. (f) Knee walls. (g) Walls and ceilings separating a garage from conditioned spaces. (h) Behind tubs and showers on exterior walls. (i) Common walls between dwelling units. (j) Attic access openings. (k) Rim joist junction. (l) Other sources of infiltration. 	
<p>11.701.4.3.2 Air sealing and insulation. Grade II and III insulation installation is not permitted. Building envelope air tightness and insulation installation is verified to be in accordance with Section 11.701.4.3.2(1) and 11.701.4.3.2(2).</p>	Mandatory
<p>(1) Testing. Building envelope tightness is tested. Testing is conducted in accordance with ASTM E-779 using a blower door at a test pressure of 1.04 psf (50 Pa). Testing is conducted after rough-in and after installation of penetrations of the building envelope, including penetrations for utilities, plumbing, electrical, ventilation and combustion appliances. Testing is conducted under the following conditions:</p> <ul style="list-style-type: none"> (a) Exterior windows and doors, fireplace and stove doors are closed, but not sealed; (b) Dampers are closed, but not sealed, including exhaust, intake, makeup air, backdraft, and flue dampers; (c) Interior doors are open; (d) Exterior openings for continuous ventilation systems and heat recovery ventilators are closed and sealed; (e) Heating and cooling system(s) is turned off; (f) HVAC ducts terminations are not sealed; and (g) Supply and return registers are not sealed. 	
<p><u>Multi-Unit Building Note:</u> <i>Testing by dwelling units, groups of dwelling units, or the building as a whole is acceptable.</i></p>	
<p>(2) Visual inspection. The air barrier and insulation items listed in Table 701.4.3.2(2) are field verified by visual inspection.</p>	

GREEN BUILDING PRACTICES	POINTS
---------------------------------	---------------

**Table 701.4.3.2(2)
Air Barrier and Insulation Installation**

COMPONENT	AIR BARRIER CRITERIA	INSULATION INSTALLATION CRITERIA
General requirements	A continuous air barrier shall be installed in the building envelope. The exterior thermal envelope contains a continuous air barrier. Breaks or joints in the air barrier shall be sealed.	Air-permeable insulation shall not be used as a sealing material.
Ceiling/attic	The air barrier in any dropped ceiling/soffit shall be aligned with the insulation and any gaps in the air barrier shall be sealed. Access openings, drop down stairs or knee wall doors to unconditioned attic spaces shall be sealed.	The insulation in any dropped ceiling/soffit shall be aligned with the air barrier.
Walls	The junction of the foundation and sill plate shall be sealed. The junction of the top plate and the top of exterior walls shall be sealed. Knee walls shall be sealed.	Cavities within corners and headers of frame walls shall be insulated by completely filling the cavity with a material having a thermal resistance of R-3 per inch minimum. Exterior thermal envelope insulation for framed walls shall be installed in substantial contact and continuous alignment with the air barrier.
Windows, skylights and doors	The space between window/door jambs and framing, and skylights and framing shall be sealed.	
Rim joists	Rim joists shall include the air barrier.	Rim joists shall be insulated.
Floors (including above garage and cantilevered floors)	The air barrier shall be installed at any exposed edge of insulation.	Floor framing cavity insulation shall be installed to maintain permanent contact with the underside of subfloor decking, or floor framing cavity insulation shall be permitted to be in contact with the top side of sheathing, or continuous insulation installed on the underside of floor framing and extends from the bottom to the top of all perimeter floor framing members.
Crawl space walls	Exposed earth in unvented crawl spaces shall be covered with a Class I vapor retarder with overlapping joints taped.	Where provided instead of floor insulation, insulation shall be permanently attached to the crawlspace walls.
Shafts, penetrations	Duct shafts, utility penetrations, and flue shafts opening to exterior or unconditioned space shall be sealed.	
Narrow cavities		Batts in narrow cavities shall be cut to fit, or narrow cavities shall be filled by insulation that on installation readily conforms to the available cavity space.
Garage separation	Air sealing shall be provided between the garage and conditioned spaces.	
Recessed lighting	Recessed light fixtures installed in the building thermal envelope shall be sealed to the drywall.	Recessed light fixtures installed in the building thermal envelope shall be air tight and IC rated.
Plumbing and wiring		Batt insulation shall be cut neatly to fit around wiring and plumbing in exterior walls, or insulation that on installation readily conforms to available space shall extend behind piping and wiring.
Shower/tub on exterior wall	The air barrier installed at exterior walls adjacent to showers and tubs shall separate them from the showers and tubs.	Exterior walls adjacent to showers and tubs shall be insulated.
Electrical/phone box on exterior walls	The air barrier shall be installed behind electrical or communication boxes or air-sealed boxes shall be installed.	
HVAC register boots	HVAC register boots that penetrate building thermal envelope shall be sealed to the subfloor or drywall.	
Concealed sprinklers	When required to be sealed, concealed fire sprinklers shall only be sealed in a manner that is recommended by the manufacturer. Caulking or other adhesive sealants shall not be used to fill voids between fire sprinkler cover plates and walls or ceilings.	

a. In addition, inspection of log walls shall be in accordance with the provisions of ICC-400.

REMODELING

GREEN BUILDING PRACTICES	POINTS
<p>11.701.4.3.3 Multi-unit air leakage alternative. Multi-unit buildings in compliance with IECC section C402.5 (Air leakage-thermal envelope) are deemed to comply with Sections 701.4.3.1 and 701.4.3.2.</p>	
<p>11.701.4.3.4 Fenestration air leakage. Newly installed Windows, skylights and sliding glass doors have an air infiltration rate of no more than 0.3 cfm per square foot (1.5 L/s/m²), and swinging doors no more than 0.5 cfm per square foot (2.6 L/s/m²), when tested in accordance with NFRC 400 or AAMA/WDMA/CSA 101/I.S.2/A440 by an accredited, independent laboratory and listed and labeled. This practice does not apply to site-built windows, skylights, and doors.</p>	Mandatory
<p>11.701.4.3.5 Recessed lighting. Newly installed recessed luminaires installed in the building thermal envelope are sealed to limit air leakage between conditioned and unconditioned spaces. All recessed luminaires are IC-rated and labeled as meeting ASTM E 283 when tested at 1.57 psf (75 Pa) pressure differential with no more than 2.0 cfm (0.944 L/s) of air movement from the conditioned space to the ceiling cavity. All recessed luminaires are sealed with a gasket or caulk between the housing and the interior of the wall or ceiling covering.</p>	Mandatory
<p>11.701.4.4 High-efficiency lighting. Lighting efficacy is in accordance with one of the following:</p>	Mandatory
<p>(1) A minimum of 75 percent of the total hard-wired lighting fixtures or the bulbs in those fixtures qualify as high efficacy or equivalent</p>	✘
<p>(2) Lighting power density, measured in watts/square foot, is 1.1 or less.</p>	✘
<p>11.701.4.5 Boiler supply piping. Boiler supply piping in unconditioned space that is accessible during the remodel is insulated.</p>	Mandatory
<p>11.701.4.6 Fenestration Specifications. The NFRC-certified U-factor and SHGC of newly installed windows, exterior doors, skylights, and tubular daylighting devices (TDDs) do not exceed the values in Table 703.2.6.1.</p>	Mandatory
<p>11.701.4.7 Replacement Fenestration. Where some or all of an existing fenestration unit is replaced with a new fenestration product, including sash and glazing, the NFRC-certified U-factor and SHGC of the replacement fenestration unit do not exceed the values in Table 703.2.6.1.</p>	Mandatory
<p>11.901 POLLUTANT SOURCE CONTROL</p>	
<p>11.901.0 Intent. Pollutant sources are controlled.</p>	
<p>11.901.1 Space and water heating options</p>	
<p>11.901.1.1 Natural draft furnaces, boilers, or water heaters are not located in conditioned spaces, including conditioned crawlspaces, unless located in a mechanical room that has an outdoor air source, and is sealed and insulated to separate it from the conditioned space(s).</p> <p style="text-align: center;">(Points are awarded only for buildings that use natural draft combustion space or water heating equipment.)</p>	5

GREEN BUILDING PRACTICES	POINTS
11.901.1.2 Air handling equipment or return ducts are not located in the garage, unless placed in isolated, air-sealed mechanical rooms with an outside air source.	5
11.901.1.3 The following combustion space heating or water heating equipment is installed within conditioned space:	
(1) all furnaces or all boilers	
(a) power vent furnace(s) or boiler(s)	3
(b) direct vent furnace(s) or boiler(s)	5
(2) all water heaters	
(a) power vent water heater(s)	3
(b) direct vent water heater(s)	5
11.901.1.4 Newly installed gas-fired fireplaces and direct heating equipment is listed and is installed in accordance with the NFPA 54, ICC IFG, or the applicable local gas appliance installation code. Gas-fired fireplaces and direct heating equipment are vented to the outdoors.	Mandatory
11.901.1.5 Natural gas and propane fireplaces are direct vented have permanently fixed glass fronts or gasketed doors, and comply with CSA Z21.88/CSA 2.33 or CSA Z21.50/CSA 2.22.	7
11.901.1.6 The following electric equipment is installed:	
(1) heat pump air handler in unconditioned space	2
(2) heat pump air handler in conditioned space	5
11.901.2 Solid fuel-burning appliances.	
11.901.2.1 Newly installed solid fuel-burning fireplaces, inserts, stoves and heaters are code compliant and are in accordance with the following requirements:	Mandatory
(1) Site-built masonry wood-burning fireplaces are equipped with outside combustion air and a means of sealing the flue and the combustion air outlets to minimize interior air (heat) loss when not in operation.	
(2) Factory-built, wood-burning fireplaces are in accordance with the certification requirements of UL 127 and are EPA certified or Phase 2 Qualified.	
(3) Wood stove and fireplace inserts, as defined in UL 1482 Section 3.8, are in accordance with the certification requirements of UL 1482 and are in accordance with the emission requirements of the EPA Certification and the State of Washington WAC 173-433-100(3).	
(4) Pellet (biomass) stoves and furnaces are in accordance with the requirements of ASTM E1509 or are EPA certified.	
(5) Masonry heaters are in accordance with the definitions in ASTM E1602 and ICC IBC, Section 2112.1.	
(6) Removal of or rendering unusable an existing fireplace or fuel burning appliance that is not in accordance with 11.901.2.1 or replacement of each fireplace or appliance that is not in accordance with 11.901.2.1 with a compliant appliance.	

GREEN BUILDING PRACTICES	POINTS
11.901.2.2 Fireplaces, woodstoves, pellet stoves, or masonry heaters are not installed.	7
11.901.3 Garages. Garages are in accordance with the following:	
(1) Attached garage	
(a) Where installed in the common wall between the attached garage and conditioned space, the door is tightly sealed and gasketed.	Mandatory 2
(b) A continuous air barrier is provided between walls and ceilings separating the garage space from the conditioned living spaces.	Mandatory 2
(c) For one- and two-family dwelling units, a 100 cfm (47 L/s) or greater ducted, or 70 cfm (33 L/s) cfm or greater unducted wall exhaust fan is installed and vented to the outdoors, designed and installed for continuous operation, or has controls (e.g., motion detectors, pressure switches) that activate operation for a minimum of 1 hour when either human passage door or roll-up automatic doors are operated. For ducted exhaust fans, the fan airflow rating and duct sizing are in accordance with Appendix A.	8
(2) A carport is installed, the garage is detached from the building, or no garage is installed.	10
11.901.4 Wood materials. A minimum of 85 percent of newly installed material within a product group (i.e., wood structural panels, countertops, composite trim/doors, custom woodwork, and/or component closet shelving) is manufactured in accordance with the following:	10 Max
(1) Structural plywood used for floor, wall, and/or roof sheathing is compliant with DOC PS 1 and/or DOC PS 2. OSB used for floor, wall, and/or roof sheathing is compliant with DOC PS 2. The panels are made with moisture-resistant adhesives. The trademark indicates these adhesives as follows: Exposure 1 or Exterior for plywood, and Exposure 1 for OSB.	Mandatory
(2) Particleboard and MDF (medium density fiberboard) is manufactured and labeled in accordance with CPA A208.1 and CPA A208.2, respectively. (Points awarded per product group.)	2
(3) Hardwood plywood in accordance with HPVA HP-1. (Points awarded per product group.)	2
(4) Particleboard, MDF, or hardwood plywood is in accordance with CPA 3. (Points awarded per product group.)	3
(5) Composite wood or agrifiber panel products contain no added urea-formaldehyde or are in accordance with the CARB <i>Composite Wood Air Toxic Contaminant Measure Standard</i> . (Points awarded per product group.)	4
(6) Non-emitting products. (Points awarded per product group.)	4
11.901.5 Cabinets. A minimum of 85 percent of newly installed cabinets are in accordance with one or both of the following: (Where both of the following practices are used, only three points are awarded.)	
(1) All parts of the cabinet are made of solid wood or non-formaldehyde emitting materials such as metal or glass.	5

GREEN BUILDING PRACTICES	POINTS
<p>(2) The composite wood used in wood cabinets are in accordance with CARB Composite Wood Air Toxic Contaminant Measure Standard or equivalent as certified by a program such as but not limited to, those in Appendix D.</p>	3
<p>11.901.6 Carpets. Carpets are in accordance with the following:</p>	
<p>(1) Wall-to-wall carpeting is not installed adjacent to water closets and bathing fixtures.</p>	Mandatory
<p>11.901.7 Floor materials. The following types of finished flooring materials are used. The materials have emission levels in accordance with CDPH/EHLB Standard Method v1.1. Product is tested by a laboratory with the CDPH/EHLB Standard Method v1.1 within the laboratory scope of accreditation to ISO/IEC 17025 and certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D. Points are awarded for every 10% of conditioned floor space using one of the below materials:</p>	
<p>(1) Hard surface flooring: Prefinished installed hard-surface flooring is installed. Where post-manufacture coatings or surface applications have not been applied, the following hard surface flooring types are deemed to comply with the emission requirements of this practice:</p>	68
<p>(a) Ceramic tile flooring</p>	
<p>(b) Organic-free, mineral-based flooring</p>	
<p>(c) Clay masonry flooring</p>	
<p>(d) Concrete masonry flooring</p>	
<p>(e) Concrete flooring</p>	
<p>(f) Metal flooring</p>	
<p>(g) Glass</p>	
<p>(2) Carpet and carpet cushion is installed.</p>	
<p>(When carpet cushion meeting the emission limits of the practice is also installed, the percentage of compliant carpet area is calculated at 1.33 times the actual installed area.)</p>	
<p>11.901.8 Wall coverings. When at least 10 percent of the interior wall surfaces are covered, a minimum of 85 percent of wall coverings are in accordance with the emission concentration limits of CDPH/EHLB Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.</p>	
4	
<p>11.901.9 Interior architectural coatings. A minimum of 85 percent of newly applied interior architectural coatings are in accordance with either Section 11.901.9.1 or Section 11.901.9.3, not both. A minimum of 85 percent of architectural colorants are in accordance with Section 11.901.9.2.</p>	
<p>Exception: Interior architectural coatings that are formulated to remove formaldehyde and other aldehydes in indoor air and are tested and labeled in accordance with ISO 16000-23,</p>	

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

Indoor air -- Part 23: Performance test for evaluating the reduction of formaldehyde concentrations by sorptive building materials.

11.901.9.1 Site-applied interior architectural coatings, which are inside the waterproofing envelope, are in accordance with one or more of the following:	5
---	----------

(1) Zero VOC as determined by EPA Method 24 (VOC content below the detection limit for the method)

(2) GreenSeal GS-11

(3) CARB *Suggested Control Measure for Architectural Coatings* (see Table 11.901.9.1)

**Table 11.901.9.1
VOC Content Limits For Architectural Coatings^{a,b,c}**

Coating Category	LIMIT ^d (g/l)
Flat Coatings	50
Non-flat Coatings	100
Non-flat - High Gloss Coatings	150

Colorant	LIMIT (g/l)
Architectural Coatings, excluding IM Coatings	50
Solvent-Based IM	600
Waterborne IM	50

<p>11.901.9.3 Site-applied interior architectural coatings are in accordance with the emission levels of CDPH/EHLB Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those found in Appendix D.</p>	8
---	----------

<p>11.901.9.4 When the building is occupied during the remodel, a minimum of 85 percent of the newly applied interior architectural coatings are in accordance with either 11.901.9.1 or 11.901.9.3.</p>	Mandatory
---	------------------

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

11.901.10 Interior adhesives and sealants. Interior low-VOC adhesives and sealants located inside the water proofing envelope: A minimum of 85 percent of newly applied site-applied products used within the interior of the building are in accordance with one of the following, as applicable.

<p>(1) The emission levels of CDPH/EHLB Standard Method v1.1. Emission levels are determined when tested by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those found in Appendix D.</p>	8
<p>(2) GreenSeal GS-36 OR</p>	5
<p>(3) SCAQMD Rule 1168 in accordance with Table 11.901.10(3), excluding products that are sold in 16 ounce containers or less and are regulated by the California Air Resources Board (CARB) Consumer Products Regulation.</p>	5

**Table 11.901.10(3)
Site Applied Adhesive And Sealants VOC Limits^{a,b}**

ADHESIVE OR SEALANT	VOC LIMIT (g/l)
Indoor carpet adhesives	50
Carpet pad adhesives	50
Outdoor carpet adhesives	150
Wood flooring adhesive	100
Rubber floor adhesives	60
Subfloor adhesives	50
Ceramic tile adhesives	65
VCT and asphalt tile adhesives	50
Drywall and panel adhesives	50
Cove base adhesives	50
Multipurpose construction adhesives	70
Structural glazing adhesives	100
Single ply roof membrane adhesives	250
Architectural sealants	250
Architectural sealant primer	
Non-porous	250
Porous	775
Modified bituminous sealant primer	500
Other sealant primers	750
CPVC solvent cement	490
PVC solvent cement	510
ABS solvent cement	325
Plastic cement welding	250
Adhesive primer for plastic	550
Contact adhesive	80
Special purpose contact adhesive	250
Structural wood member adhesive	140

a. VOC limit less water and less exempt compounds in grams/liter
 b. For low-solid adhesives and sealants, the VOC limit is expressed in grams/liter of material as specified in Rule 1168. For all other adhesives and sealants, the VOC limits are expressed as grams of VOC per liter of adhesive or sealant less water and less exempt compounds as specified in Rule 1168.

GREEN BUILDING PRACTICES	POINTS
<p>11.901.11 Insulation. Emissions of 85 percent of newly installed wall, ceiling, and floor insulation materials are in accordance with the emission levels of CDPH/EHLB. Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.</p>	4
<p>11.901.12 Carbon monoxide (CO) alarms. A carbon monoxide (CO) alarm is installed in a central location outside of each separate sleeping area in the immediate vicinity of the bedrooms. The CO alarm(s) is located in accordance with NFPA 720 and is hard-wired with a battery back-up. The alarm device(s) is certified by a third-party for conformance to either CSA 6.19 or UL 2034.</p>	3
<p>11.901.13 Building entrance pollutants control. Pollutants are controlled at all main building entrances by one of the following methods:</p>	
<p>(1) Exterior grilles or mats are installed in a fixed manner and may be removable for cleaning.</p>	1
<p>(2) Interior grilles or mats are installed in a fixed manner and may be removable for cleaning.</p>	1
<p>11.901.14 Non-smoking areas. Environmental tobacco smoke is minimized by one or more of the following:</p>	
<p>(1) All interior common areas of a multi-unit building are designated as non-smoking areas with posted signage.</p>	1
<p>(2) Exterior smoking areas of a multi-unit building are designated with posted signage and located a minimum of 25 feet from entries, outdoor air intakes, and operable windows.</p>	1
<p>11.901.15 Lead-safe work practices. For buildings constructed before 1978, lead-safe work practices are used during the remodeling.</p>	Mandatory

**11.902
POLLUTANT CONTROL**

<p>11.902.0 Intent. Pollutants generated in the building are controlled.</p>	
<p>11.902.1 Spot ventilation.</p>	
<p>11.902.1.1 Spot ventilation is in accordance with the following:</p>	
<p>(1) Bathrooms are vented to the outdoors. The minimum ventilation rate is 50 cfm (23.6 L/s) for intermittent operation or 20 cfm (9.4 L/s) for continuous operation in bathrooms. (Points are awarded only if a window complying with IRC Section R303.3 is provided in addition to mechanical ventilation.)</p>	Mandatory 1
<p>(2) Clothes dryers (except listed and labeled condensing ductless dryers) are vented to the outdoors.</p>	Mandatory
<p>(3) Kitchen exhaust units and/or range hoods are ducted to the outdoors and have a minimum ventilation rate of 100 cfm (47.2 L/s) for intermittent operation or 25 cfm (11.8 L/s) for continuous operation.</p>	8

REMODELING

GREEN BUILDING PRACTICES	POINTS
11.902.1.2 Bathroom and/or laundry exhaust fan is provided with an automatic timer and/or humidistat:	11 Max
(1) for first device	5
(2) for each additional device	2
11.902.1.3 Kitchen range, bathroom, and laundry exhaust are verified to air flow specification. Ventilation airflow at the point of exhaust is tested to a minimum of:	8
(a) 100 cfm (47.2 L/s) intermittent or 25 cfm (11.8 L/s) continuous for kitchens, and	6
(b) 50 cfm (23.6 L/s) intermittent or 20 cfm (9.4 L/s) continuous for bathrooms and/or laundry.	
11.902.1.4 Exhaust fans are ENERGY STAR, as applicable.	12 Max
(1) ENERGY STAR, or equivalent, fans <p style="text-align: right;">(Points awarded per fan.)</p>	2
(2) ENERGY STAR, or equivalent, fans operating at or below 1 sone <p style="text-align: right;">(Points awarded per fan.)</p>	3
11.902.1.5 Fenestration in spaces other than those identified in 902.1.1 through 902.1.4 are designed for cross-ventilation in accordance with all of the following:	
(1) Operable windows and sliding glass doors with a total area of at least 15 percent of the conditioned floor area are provided.	
(2) Insect screens are provided for all operable windows and sliding glass doors.	
(3) A minimum of two windows or sliding glass doors are placed in adjacent or opposite walls. If there is only one wall surface in that space exposed to the exterior, the minimum windows or sliding glass doors may be on the same wall.	
11.902.2 Building ventilation systems	
11.902.2.1 One of the following whole building ventilation systems is implemented and is in accordance with the specifications of Appendix B and an explanation of the operation and importance of the ventilation system is included in either 1001.1 or 1003.2.	Mandatory where the maximum air infiltration rate is less than 5.0 ACH50
(1) exhaust or supply fan(s) ready for continuous operation and with appropriately labeled controls	3
(2) balanced exhaust and supply fans with supply intakes located in accordance with the manufacturer's guidelines so as to not introduce polluted air back into the building	6
(3) heat-recovery ventilator	7
(4) energy-recovery ventilator	8

GREEN BUILDING PRACTICES	POINTS
<p>11.902.2.2 Ventilation airflow is tested to achieve the design fan airflow at point of exhaust in accordance with Section 11.902.2.1.</p>	<p>4</p>
<p>11.902.2.3 MERV filters 8 to 13 are installed on central forced air systems and are accessible. Designer or installer is to verify that the HVAC equipment is able to accommodate the greater pressure drop of MERV 8 to 13 filters.</p>	<p>3</p>
<p>11.902.2.4 MERV filters 14 or greater are installed on central forced air systems and are accessible. Designer or installer is to verify that the HVAC equipment is able to accommodate the greater pressure drop of the filter used.</p>	<p>X</p>
<p>11.902.3 Radon control. Radon control measures are in accordance with ICC IRC Appendix F. Zones are defined in Figure 9(1). This practice is not mandatory if the existing building has been tested for radon and is in accordance with federal and local acceptable limits.</p>	
<p>(1) Buildings located in Zone 1</p>	<p>Mandatory</p>
<p> (a) a passive radon system is installed</p>	<p>7</p>
<p> (b) an active radon system is installed</p>	<p>10</p>
<p>(2) Buildings located in Zone 2 or Zone 3</p>	
<p> (a) a passive or active radon system is installed</p>	<p>7</p>
<p>11.902.4 HVAC system protection. One of the following HVAC system protection measures is performed.</p>	
<p>(1) HVAC supply registers (boots), return grilles, and rough-ins are covered during construction activities to prevent dust and other pollutants from entering the system.</p>	<p>3</p>
<p>(2) Prior to owner occupancy, HVAC supply registers (boots), return grilles, and duct terminations are inspected and vacuumed. In addition, the coils are inspected and cleaned and the filter is replaced if necessary.</p>	
<p>11.902.5 Central vacuum systems. Central vacuum system is installed and vented to the outside.</p>	<p>3</p>
<p>11.902.6 Living space contaminants. The living space is sealed in accordance with Section 11.701.4.3.1 to prevent unwanted contaminants.</p>	<p>Mandatory</p>
<p>11.903 MOISTURE MANAGEMENT: VAPOR, RAINWATER, PLUMBING, HVAC</p>	
<p>11.903.0 Intent. Moisture and moisture effects are controlled.</p>	
<p>11.903.1 Plumbing</p>	
<p>11.903.1.1 Cold water pipes in unconditioned spaces are insulated to a minimum of R-4 with pipe insulation or other covering that adequately prevents condensation.</p>	<p>2</p>

REMODELING

GREEN BUILDING PRACTICES	POINTS
11.903.1.2 Plumbing is not installed in unconditioned spaces.	5
11.903.2 Duct insulation. Ducts are in accordance with one of the following:	
(1) All HVAC ducts, plenums, and trunks in are conditioned space.	1
(2) All HVAC ducts, plenums, and trunks in are conditioned space. All HVAC ducts are insulated to a minimum of R4.	3
11.903.3 Relative humidity. In climate zones 1A, 2A, 3A, 4A, and 5A as defined by Figure 6(1), equipment is installed to maintain relative humidity (RH) at or below 60 percent using one of the following: (Points not awarded in other climate zones.)	7
(1) additional dehumidification system(s)	
(2) central HVAC system equipped with additional controls to operate in dehumidification mode	
11.904 INDOOR AIR QUALITY	
11.904.0 Intent. IAQ is protected by best practices to control ventilation, moisture, pollutant sources and sanitation.	
11.904.1 Indoor Air Quality (IAQ) During Construction. Wood is dry before close-in (602.1.7(3)), materials comply with emission criteria (901.4- 901.11), sources of water infiltration or condensation observed during construction have been eliminated, accessible interior surfaces are dry and free of visible suspect growth (per ASTM D7338-10 section6.3), water damage (per ASTM D7338-10 section 7.4.3), and visible dust.	TBD₂
11.904.2 Indoor Air Quality (IAQ) Post Completion. Verify moisture, mold, and dust issues.	TBD₃
11.905 INNOVATIVE PRACTICES	
11.905.1 Humidity monitoring system. A humidity monitoring system is installed with a mobile base unit that displays readings of temperature and relative humidity. The system has a minimum of two remote sensor units. One remote unit is placed permanently inside the conditioned space in a central location, excluding attachment to exterior walls, and another remote sensor unit is placed permanently outside of the conditioned space.	2
11.905.2 Kitchen exhaust. A kitchen exhaust unit(s) that equals or exceeds 400 cfm (189 L/s) is installed, and makeup air is provided.	2
11.1001 HOMEOWNER'S MANUAL AND TRAINING GUIDELINES FOR ONE- AND TWO-FAMILY DWELLINGS	

GREEN BUILDING PRACTICES	POINTS
<p>11.1001.0 Intent. Information on the building's use, maintenance, and green components is provided.</p>	
<p>11.1001.1 A homeowner's manual is provided and stored in a permanent location in the dwelling that includes the following, as available and applicable.</p> <p style="text-align: center;">(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	<p>1 8 Max</p>
<p>(1) Detailed information about the National Green Building Standard, its requirements, and how NGBS compliance was determined, along with a green building program certificate or completion document.</p>	<p>Mandatory</p>
<p>(2) List of green building features (can include the national green building checklist).</p>	<p>Mandatory</p>
<p>(3) Product manufacturer's manuals or product data sheet for newly installed major equipment, fixtures, and appliances including product model numbers and serial numbers. If product data sheet is in the building owners' manual, manufacturer's manual may be attached to the appliance in lieu of inclusion in the building owners' manual.</p>	<p>Mandatory</p>
<p>(4) Maintenance checklist.</p>	
<p>(5) Information on local recycling and composting programs.</p>	
<p>(6) Information on available local utility programs that purchase a portion of energy from renewable energy providers.</p>	
<p>(7) Explanation of the benefits of using energy-efficient lighting systems [e.g., compact fluorescent light bulbs, light emitting diode (LED)] in high-usage areas.</p>	
<p>(8) A list of practices to conserve water and energy.</p>	
<p>(9) Information on the importance and operation of the home's fresh air ventilation system.</p>	
<p>(10) Local public transportation options.</p>	
<p>(11) A diagram showing the location of safety valves and controls for major building systems.</p>	
<p>(12) Where frost-protected shallow foundations are used, owner is informed of precautions including:</p> <ul style="list-style-type: none"> (a) instructions to not remove or damage insulation when modifying landscaping. (b) providing heat to the building as required by the ICC IRC or IBC. (c) keeping base materials beneath and around the building free from moisture caused by broken water pipes or other water sources. 	
<p>(13) A list of local service providers that offer regularly scheduled service and maintenance contracts to ensure proper performance of equipment and the structure (e.g., HVAC, water-heating equipment, sealants, caulks, gutter and downspout system, shower and/or tub surrounds, irrigation system).</p>	
<p>(14) A photo record of framing with utilities installed. Photos are taken prior to installing insulation, clearly labeled, and included as part of the building owners' manual.</p>	
<p>(15) List of common hazardous materials often used around the building and instructions for proper handling and disposal of these materials.</p>	
<p>(16) Information on organic pest control, fertilizers, deicers, and cleaning products.</p>	
<p>(17) Information on native landscape materials and/or those that have low-water requirements.</p>	

REMODELING

GREEN BUILDING PRACTICES	POINTS
(18) Information on methods of maintaining the building’s relative humidity in the range of 30 percent to 60 percent.	
(19) Instructions for inspecting the building for termite infestation.	
(20) Instructions for maintaining gutters and downspouts and importance of diverting water a minimum of 5 feet away from foundation.	
(21) A narrative detailing the importance of maintenance and operation in retaining the attributes of a green-built building.	
(22) Where stormwater management measures are installed on the lot, information on the location, purpose, and upkeep of these measures.	
(23) For buildings originally built before 1978, the EPA publications “Reducing Lead Hazards When Remodeling Your Home” and “Abestos in Your Home: A Homeowner’s Guide”.	
(24) Explanation of and benefits from green cleaning in the home.	
(25) Retrofit energy calculator that provides baseline for future energy retrofits.	

11.1001.2 Training of building owners. Building owners are familiarized with the role of occupants in achieving green goals. On-site training is provided to the responsible party(ies) regarding newly installed equipment operation and maintenance, control systems, and occupant actions that will improve the environmental performance of the building. These include:	Mandatory 8
(1) HVAC filters	
(2) thermostat operation and programming	
(3) lighting controls	
(4) appliances operation	
(5) water heater settings and hot water use	
(6) fan controls	
(7) Recycling and composting practices	

**11.1002
CONSTRUCTION, OPERATION, AND MAINTENANCE MANUALS AND TRAINING FOR
MULTI-UNIT BUILDINGS**

11.1002.0 Intent. Manuals are provided to the responsible parties (owner, management, tenant, and/or maintenance team) regarding the construction, operation, and maintenance of the building. Paper or digital format manuals are to include information regarding those aspects of the building’s construction, maintenance, and operation that are within the area of responsibilities of the respective recipient. One or more responsible parties are to receive a copy of all documentation for archival purposes.

11.1002.1 Building construction manual. A building construction manual, including five or more of the following, is compiled and distributed in accordance with Section 11.1003.0.	1
---	----------

GREEN BUILDING PRACTICES	POINTS
<p>(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	
<p>(1) A narrative detailing the importance of constructing a green building, including a list of green building attributes included in the building. This narrative is included in all responsible parties' manuals.</p>	Mandatory
<p>(2) A local green building program certificate as well as a copy of the <i>National Green Building Standard™</i>, as adopted by the Adopting Entity, and the individual measures achieved by the building.</p>	Mandatory
<p>(3) Warranty, operation, and maintenance instructions for all equipment, fixtures, appliances, and finishes.</p>	Mandatory
<p>(4) Record drawings of the building.</p>	
<p>(5) A record drawing of the site including stormwater management plans, utility lines, landscaping with common name and genus/species of plantings.</p>	
<p>(6) A diagram showing the location of safety valves and controls for major building systems.</p>	
<p>(7) A list of the type and wattage of light bulbs installed in light fixtures.</p>	
<p>(8) A photo record of framing with utilities installed. Photos are taken prior to installing insulation and clearly labeled.</p>	
<p>11.1002.2 Operations manual. Operations manuals are created and distributed to the responsible parties in accordance with Section 11.1002.0. Among all of the operation manuals, five or more of the following options are included.</p>	1
<p>(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p>	
<p>(1) A narrative detailing the importance of operating and living in a green building. This narrative is included in all responsible parties' manuals.</p>	Mandatory
<p>(2) A list of practices to conserve water and energy (e.g., turning off lights when not in use, switching the rotation of ceiling fans in changing seasons, purchasing ENERGY STAR appliances and electronics).</p>	Mandatory
<p>(3) Information on methods of maintaining the building's relative humidity in the range of 30 percent to 60 percent.</p>	
<p>(4) Information on opportunities to purchase renewable energy from local utilities or national green power providers and information on utility and tax incentives for the installation of on-site renewable energy systems.</p>	
<p>(5) Information on local and on-site recycling and hazardous waste disposal programs and, if applicable, building recycling and hazardous waste handling and disposal procedures.</p>	
<p>(6) Local public transportation options.</p>	
<p>(7) Explanation of the benefits of using compact fluorescent light bulbs, LEDs, or other high-efficiency lighting.</p>	
<p>(8) Information on native landscape materials and/or those that have low water requirements.</p>	
<p>(9) Information on the radon mitigation system, where applicable.</p>	
<p>(10) A procedure for educating tenants in rental properties on the proper use, benefits, and maintenance of green building systems including a maintenance staff notification process for improperly functioning equipment.</p>	

GREEN BUILDING PRACTICES	POINTS
--------------------------	--------

(11) Information on the importance and operation of the building’s fresh air ventilation system.

<p>11.1002.3 Maintenance manual. Maintenance manuals are created and distributed to the responsible parties in accordance with Section 11.1002.0. Between all of the maintenance manuals, five or more of the following options are included.</p> <p style="text-align: center;">(Points awarded per two items. Points awarded for both mandatory and non-mandatory items.)</p> <p>(1) A narrative detailing the importance of maintaining a green building. This narrative is included in all responsible parties’ manuals.</p> <p>(2) A list of local service providers that offer regularly scheduled service and maintenance contracts to ensure proper performance of equipment and the structure (e.g., HVAC, water-heating equipment, sealants, caulks, gutter and downspout system, shower and/or tub surrounds, irrigation system).</p> <p>(3) User-friendly maintenance checklist that includes:</p> <ul style="list-style-type: none"> (a) HVAC filters (b) thermostat operation and programming (c) lighting controls (d) appliances and settings (e) water heater settings (f) fan controls <p>(4) List of common hazardous materials often used around the building and instructions for proper handling and disposal of these materials.</p> <p>(5) Information on organic pest control, fertilizers, deicers, and cleaning products.</p> <p>(6) Instructions for maintaining gutters and downspouts and the importance of diverting water a minimum of 5 feet away from foundation.</p> <p>(7) Instructions for inspecting the building for termite infestation.</p> <p>(8) A procedure for rental tenant occupancy turnover that preserves the green features.</p> <p>(9) An outline of a formal green building training program for maintenance staff.</p> <p>(10) A green cleaning plan which includes guidance on sustainable cleaning products.</p>	<p>1</p> <p>Mandatory</p>
--	---

<p>11.1002.4 Training of building owners. Building owners are familiarized with the role of occupants in achieving green goals. On-site training is provided to the responsible party(ies) regarding newly installed equipment operation and maintenance, control systems, and occupant actions that will improve the environmental performance of the building. These include:</p>	<p>Mandatory</p> <p>8</p>
<p>(1) HVAC filters</p>	
<p>(2) thermostat operation and programming</p>	
<p>(3) lighting controls</p>	
<p>(4) appliances operation</p>	
<p>(5) water heater settings and hot water use</p>	

GREEN BUILDING PRACTICES	POINTS
(6) fan controls	
(7) recycling and composting practices	
11.1003 PUBLIC EDUCATION	
11.1003.0 Intent. Increase public awareness of the National Green Building Standard and projects constructed in accordance with National Green Building Standard to help increase demand for high-performance homes.	(X Max Points)
<u>11.1003.1 Public Education. One or more of the following is implemented:</u>	2 Max
<u>(1) Signage. Signs showing the project is designed and built in accordance with the National Green Building Standard are posted on the construction site.</u>	1
<u>(2) Certification Plaques. National Green Building Standard certification plaques with rating level attained are placed in a conspicuous location near the utility area of the home or, in a conspicuous location near the main entrance of a multifamily building.</u>	1
<u>(3) Education. A URL for the National Green Building Standard is included on site signage and marketing materials for homes certified under the National Green Building Standard.</u>	1
11.1003. 1 Signage. Signs showing the project is designed and built in accordance with the National Green Building Standard are posted on the construction site.	(X Points)
11.1003. 2 Certification Plaques. National Green Building Standard certification plaques with rating level attained are placed in a conspicuous location near the utility area of the home or, in a conspicuous location near the main entrance of a multifamily building.	(X Points)
11.1003. 3 Education. A URL for the National Green Building Standard is included on site signage and marketing materials for homes certified under the National Green Building Standard.	(X Points)
11.1006 INNOVATIVE PRACTICES	
11.1004.1 (Reserved)	

CHAPTER 12

REMODELING OF FUNCTIONAL AREAS

GREEN BUILDING PRACTICES

Note: Where applicable, section numbering in Chapter 12 parallels a corresponding practice in a previous chapter.

12.00 REMODELING OF FUNCTIONAL AREAS

12.0 Intent. This chapter sets forth the mandatory green building practices for remodeling functional areas of buildings. The intent of Chapter 12 is to address the most common remodeling projects: complete kitchen, full bathroom, complete basement, attic conversion to habitable space, or an addition less than 50% of the existing original conditioned floor area not to exceed 800 square feet. Chapter 12 is not intended to be used for rating minor alterations.

12.0.1 Applicability. Each applicable practice in Section 12.1 shall be met for any of the remodeled functional areas included in Chapter 12. Additionally, the requirements of Sections 12.2, 12.3, 12.4, or 12.5 that are specific to each of the functional areas shall be met. Unless otherwise required, the requirements of Chapter 12 only apply to the remodeled functional area.

12.1 GENERAL

12.1.601.2 Material usage. Structural systems required for the remodel are designed or construction techniques are implemented that reduce and optimize material usage using at least one of the following methods

- (1) Minimum structural member or element sizes necessary for strength and stiffness in accordance with advanced framing techniques or structural design standards are selected.
- (2) Higher-grade or higher-strength of the same materials than commonly specified for structural elements and components in the building are used and element or component sizes are reduced accordingly.
- (3) Performance-based structural design is used to optimize lateral force-resisting systems.

12.1.602.1.7.1 Moisture control measures. Moisture control measures for newly installed materials are in accordance with the following:

- (1) Building materials with visible mold are not installed or are cleaned or encapsulated prior to concealment and closing.
- (2) Insulation in cavities is dry in accordance with manufacturer's installation instructions when enclosed (e.g., with drywall).

GREEN BUILDING PRACTICES

12.1.602.1.7.2 Moisture content. Moisture content of subfloor, substrate, or concrete slabs is in accordance with the appropriate industry standard for the finish flooring to be applied during the remodel.

12.1.602.1.11 Tile backing materials. Newly installed tile backing materials under tiled surfaces in wet areas are in accordance with ASTM C1178, C1278, C1288, or C1325.

12.1(A) Product or material selection. At least two newly installed types of materials from Section 12.1(A) are used.

12.1(A).601.7 Prefinished materials. One or more of the prefinished building materials or assemblies listed below have no additional site-applied finishing material installed.

- (a) interior trim not requiring paint or stain
- (b) exterior trim not requiring paint or stain
- (c) window, skylight, and door assemblies not requiring paint or stain on one of the following surfaces:
 - i. exterior surfaces
 - ii. interior surfaces
- (d) interior wall coverings or systems, floor systems, and/or ceiling systems not requiring paint or stain or other type of finishing application
- (e) exterior wall coverings or systems, floor systems, and/or ceiling systems not requiring paint or stain or other type of finishing application

12.1(A).603.1 Reused and salvaged materials. Reclaimed and/or salvaged materials and components are used in the remodel.

12.1(A).604.1 Recycled content. Newly installed building materials with at least 25% recycled content are used for two components of the remodel.

12.1(A).605.1 Construction waste management plan. A construction waste management plan that includes targets for diversion is developed, posted at the jobsite, and implemented.

12.1(A).606.1 Biobased products. Two or more of the following biobased products are used in the remodel.

- (a) certified solid wood in accordance with Section 12.1(A).606.2
- (b) engineered wood
- (c) bamboo
- (d) cotton
- (e) cork
- (f) straw

GREEN BUILDING PRACTICES

(g) natural fiber products made from crops (soy-based, corn-based)

(h) other biobased materials with a minimum of 50 percent biobased content (by weight or volume)

12.1(A).606.2 Wood-based products. Wood or wood-based products installed during the remodel are certified to the requirements of one of the following recognized product programs:

(a) American Forest Foundation’s American Tree Farm System® (ATFS)

(b) Canadian Standards Association’s Sustainable Forest Management System Standards (CSA Z809)

(c) Forest Stewardship Council (FSC)

(d) Program for Endorsement of Forest Certification Systems (PEFC)

(e) Sustainable Forestry Initiative® Program (SFI)

(f) National Wood Flooring Association’s Responsible Procurement Program (RPP)

(g) other product programs mutually recognized by PEFC

12.1(A).608.1 Resource-efficient materials. One or more products containing fewer materials are used in the remodel to achieve the same end-use requirements as conventional products, including but not limited to:

(a) lighter, thinner brick with bed depth less than 3 inches and/or brick with coring of more than 25 percent

(b) engineered wood or engineered steel products

(c) roof or floor trusses

12.1(A).609.1 Regional materials. One or more regional materials are used in the remodel for major and/or minor components of the building.

(For a component to comply with this practice, a minimum of 75% of all products in that component category must be sourced regionally, e.g., stone veneer category – 75 percent or more of the stone veneer on a project must be sources regionally.)

12.1(A).610.1 Life cycle assessment. A life cycle assessment (LCA) tool is used to select environmentally preferable products, assemblies, or entire functional area in accordance with Section 12.1(A).610.1.1 or 12.1(A).610.1.2, respectively. Only one method of analysis or tool may be utilized. The reference service life is 60 years for any LCA tool. Results of the LCA are reported in terms of the environmental impacts listed in this practice and it is stated if operating energy was included in the LCA.

12.1(A).610.1.1 Functional area life cycle assessment. An LCA is performed in conformance with ASTM E-2921 for an entire functional area using ISO14044 compliant life cycle assessment.

GREEN BUILDING PRACTICES

(1) Execute LCA at the functional area level through a comparative analysis between the final and reference building designs as set forth under Standard Practice, ASTM E-2921. The assessment criteria includes the following environmental impact categories:

- (a)** primary energy use
- (b)** Global warming potential
- (c)** Acidification potential
- (d)** Eutrophication potential
- (e)** Ozone depletion potential
- (f)** Smog potential

(2) Execute LCA on regulated loads throughout the building operations life cycle stage. Conduct simulated energy performance analyses in accordance with Section 702.2.1 ICC IECC analysis (IECC Section 405) in establishing the comparative performance of final versus reference building designs. Primary energy use savings and global warming potential avoidance from simulation analyses results are determined using EPA NERC electricity generation and other fuels energy conversion factors and electricity generation and other fuels emission rates for the Sub-Region in which the building is located.

(3) Execute full LCA, including use-phase, through calculation of operating energy impacts (c) – (f) using EPA NERC regional emissions factors [provide full reference to NERC document or provide factor tables].

12.1(A).610.1.2 Life cycle assessment for a product or assembly. An environmentally preferable product or assembly is selected for an application based upon the use of an LCA tool that incorporates data methods compliant with ISO 14044 or other recognized standards that compare the environmental impact of products or assemblies.

(1) Two or more products with the same intended use are compared based on LCA and the product with at least a 15% average improvement is selected. A minimum of four environmental impact measures are included in the comparison. The environmental impact measures to be considered are chosen from the following:

- (a)** primary energy use
- (b)** global warming potential
- (c)** acidification potential
- (d)** eutrophication potential
- (e)** ozone depletion potential
- (f)** smog potential

GREEN BUILDING PRACTICES

(2) An assembly with improved environmental impact measures that are on average at least 15% better than a comparable functionally assembly is selected. A minimum of four environmental impact measures are included in the comparison. The full life cycle, from resource extraction to demolition and disposal (including but not limited to on-site construction, maintenance and replacement, material and product embodied acquisition, and process and transportation energy), is assessed. The assessment includes all structural elements, insulation, and wall coverings of the assembly. The assessment does not include electrical and mechanical equipment and controls, plumbing products, fire detection and alarm systems, elevators, and conveying systems. The following functional building elements are eligible for points under this practice:

- (a)** exterior walls
- (b)** roof/ceiling
- (c)** interior walls or ceilings
- (d)** intermediate floors

The environmental impact measures to be considered are chosen from the following:

- (a)** primary energy use
- (b)** global warming potential
- (c)** acidification potential
- (d)** eutrophication potential
- (e)** ozone depletion potential
- (f)** smog potential

12.1(A).611.1 Manufacturer’s environmental management system concepts. For one or more products used in the remodel, the product’s manufacturer’s operations and business practices include environmental management system concepts, and the production facility is registered to ISO 14001 or equivalent.

12.1(A).611.2 Sustainable products. One or more of the following products are used. Certification third-party agency is ISO Guide 65 accredited.

- (1)** 50% or more of carpet installed (by square feet) is third-party certified to NSF/ANSI 140.
- (2)** 50% or more of resilient flooring installed (by square feet) is third-party certified to NSF/ANSI 332.
- (3)** 50% or more of the insulation installed (by square feet) is third-party certified to EcoLogo CCD-016.
- (4)** 50% or more of interior wall coverings installed (by square feet) is third-party certified to NSF/ANSI 342.
- (5)** 50% or more of the gypsum board installed (by square feet) is third-party certified to UL 100.
- (6)** 50% or more of the door leafs installed (by number of door leafs) is third-party certified to UL 102.

GREEN BUILDING PRACTICES

(7) 50% or more of the tile installed (by square feet) is third-party certified to ANSI A138.1 Specifications for sustainable ceramic tiles, glass tiles and tile installation materials.

12.1.605.0 Hazardous materials and waste. All hazardous materials exposed during the remodel are removed or comply with federal and local regulations. All waste classified as hazardous shall be properly handled and disposed of.

12.1.701.4.0 Minimum Energy Efficiency Requirements. Additions, alterations, or renovations to an existing building, building system or portion thereof comply with the provisions of the International Energy Conservation Code as they relate to new construction without requiring the unaltered portion(s) of the existing building or building system to comply with this code. An addition complies with the IECC if the addition complies or if the existing building and addition comply with the IECC as a single building.

12.1.701.4.1.1 HVAC system sizing. Newly installed or modified space heating and cooling system is sized according to heating and cooling loads calculated using ACCA Manual J, or equivalent. New equipment is selected using ACCA Manual S or equivalent. Where existing equipment is used, Manual J is used to verify the capacity is appropriate for the remodel.

12.1.701.4.2.1 Duct air sealing. Newly installed or modified ducts or ducts that are exposed during the remodel are air sealed. All duct sealing materials are rated to UL 181A or UL 181B specifications and are used in accordance with manufacturer’s instructions.

12.1.701.4.2.2 Ducts and plenums. Building framing cavities are not used as ducts or plenums. Existing building cavities currently used as supply ducts exposed during the remodel are lined.

12.1.701.4.2.3 Duct system sizing. New duct system is sized and designed in accordance with ACCA Manual D or equivalent.

12.1.701.4.3.1 Building thermal envelope Air Sealing. The portions of the building thermal envelope that are exposed or created during the remodel are durably sealed to limit infiltration. The sealing methods between dissimilar materials allow for differential expansion and contraction. The following are caulked, gasketed, weather-stripped, or otherwise sealed with an air barrier material, suitable film, or solid material:

- (a)** All joints, seams, and penetrations.
- (b)** Site-built windows, doors, and skylights.
- (c)** Openings between window and door assemblies and their respective jambs and framing.
- (d)** Utility penetrations.
- (e)** Dropped ceilings or chases adjacent to the thermal envelope.
- (f)** Knee walls.
- (g)** Walls and ceilings separating a garage from conditioned spaces.
- (h)** Behind tubs and showers on exterior walls.
- (i)** Common walls between dwelling units.

GREEN BUILDING PRACTICES

- (j) Attic access openings.
- (k) Rim joist junction.
- (l) Other sources of infiltration.

12.1.701.4.3.2 Air sealing and insulation. Grade II and III installation is not permitted for newly installed insulation. For the portions of the building envelope that are exposed or created during the remodel, air barrier and insulation items listed in Table 12.1.701.4.3.2(2) are field verified via visual inspection.

**Table 12.1.701.4.3.2(2)
Air Barrier and Insulation Installation**

GREEN BUILDING PRACTICES

COMPONENT	AIR BARRIER CRITERIA	INSULATION INSTALLATION CRITERIA
General requirements	A continuous air barrier shall be installed in the building envelope. The exterior thermal envelope contains a continuous air barrier. Breaks or joints in the air barrier shall be sealed.	Air-permeable insulation shall not be used as a sealing material.
Ceiling/attic	The air barrier in any dropped ceiling/soffit shall be aligned with the insulation and any gaps in the air barrier shall be sealed. Access openings, drop down stairs or knee wall doors to unconditioned attic spaces shall be sealed.	The insulation in any dropped ceiling/soffit shall be aligned with the air barrier.
Walls	The junction of the foundation and sill plate shall be sealed. The junction of the top plate and the top of exterior walls shall be sealed. Knee walls shall be sealed.	Cavities within corners and headers of frame walls shall be insulated by completely filling the cavity with a material having a thermal resistance of R-3 per inch minimum. Exterior thermal envelope insulation for framed walls shall be installed in substantial contact and continuous alignment with the air barrier.
Windows, skylights and doors	The space between window/door jambs and framing, and skylights and framing shall be sealed.	
Rim joists	Rim joists shall include the air barrier.	Rim joists shall be insulated.
Floors (including above garage and cantilevered floors)	The air barrier shall be installed at any exposed edge of insulation.	Floor framing cavity insulation shall be installed to maintain permanent contact with the underside of subfloor decking, or floor framing cavity insulation shall be permitted to be in contact with the top side of sheathing, or continuous insulation installed on the underside of floor framing and extends from the bottom to the top of all perimeter floor framing members.
Crawl space walls	Exposed earth in unvented crawl spaces shall be covered with a Class I vapor retarder with overlapping joints taped.	Where provided instead of floor insulation, insulation shall be permanently attached to the crawlspace walls.
Shafts, penetrations	Duct shafts, utility penetrations, and flue shafts opening to exterior or unconditioned space shall be sealed.	
Narrow cavities		Batts in narrow cavities shall be cut to fit, or narrow cavities shall be filled by insulation that on installation readily conforms to the available cavity space.
Garage separation	Air sealing shall be provided between the garage and conditioned spaces.	
Recessed lighting	Recessed light fixtures installed in the building thermal envelope shall be sealed to the drywall.	Recessed light fixtures installed in the building thermal envelope shall be air tight and IC rated.
Plumbing and wiring		Batt insulation shall be cut neatly to fit around wiring and plumbing in exterior walls, or insulation that on installation readily conforms to available space shall extend behind piping and wiring.
Shower/tub on exterior wall	The air barrier installed at exterior walls adjacent to showers and tubs shall separate them from the showers and tubs.	Exterior walls adjacent to showers and tubs shall be insulated.
Electrical/phone box on exterior walls	The air barrier shall be installed behind electrical or communication boxes or air-sealed boxes shall be installed.	
HVAC register boots	HVAC register boots that penetrate building thermal envelope shall be sealed to the subfloor or drywall.	
Concealed sprinklers	When required to be sealed, concealed fire sprinklers shall only be sealed in a manner that is recommended by the manufacturer. Caulking or other adhesive sealants shall not be used to fill voids between fire sprinkler cover plates and walls or ceilings.	

a. In addition, inspection of log walls shall be in accordance with the provisions of ICC-400.

GREEN BUILDING PRACTICES

12.1.701.4.3.4 Fenestration air leakage. Newly installed windows, skylights, and sliding glass doors (except site-built windows, skylights, and doors) have an air infiltration rate of no more than 0.3 cfm per square foot (1.5 L/s/m²), and swinging doors no more than 0.5 cfm per square foot (2.6 L/s/m²), when tested in accordance with NFRC 400 or AAMA/WDMA/CSA 101/I.S.2/A440 by an accredited, independent laboratory, and are listed and labeled.

12.1.701.4.3.5 Recessed lighting. Newly installed recessed luminaires installed in the building thermal envelope are sealed to limit air leakage between conditioned and unconditioned spaces. All recessed luminaires are IC-rated and labeled as meeting ASTM E 283 when tested at 1.57 psf (75 Pa) pressure differential with no more than 2.0 cfm (0.944 L/s) of air movement from the conditioned space to the ceiling cavity. All recessed luminaires are sealed with a gasket or caulk between the housing and the interior of the wall or ceiling covering.

- 12.1.701.4.4 High-efficacy lighting.** Lighting efficacy is in accordance with one of the following:
- (1) A minimum of 75 percent of the total hard-wired lighting fixtures or the bulbs in those fixtures qualify as high efficacy or equivalent X
 - (2) Lighting power density, measured in watts/square foot, is 1.1 or less. X

12.1.701.4.5 Boiler supply piping. Insulate all newly installed boiler supply piping in unconditioned space and insulate existing boiler supply piping in unconditioned space where accessible.

12.1.701.4.6 Fenestration Specifications. The NFRC-certified U-factor and SHGC of newly installed windows, exterior doors, skylights, and tubular daylighting devices (TDDs) do not exceed the values in Table 703.2.6.1.

12.1.701.4.7 Replacement Fenestration. Where some or all of an existing fenestration unit is replaced with a new fenestration product, including sash and glazing, the NFRC-certified U-factor and SHGC of the replacement fenestration unit do not exceed the values in Table 703.2.6.1.

12.1.703.5.3 Appliances. All newly installed major appliances in the remodeled portion of the building are ENERGY STAR or equivalent:

12.1.901.1.4 Gas-fired equipment. Newly installed gas-fired fireplaces and direct heating equipment is listed and is installed in accordance with the National Fuel Gas Code, International Fuel Gas Code, or the applicable local gas appliance installation code. Gas-fired fireplaces and direct heating equipment are vented to the outdoors.

- 12.1.901.2.1 Solid fuel-burning appliances.** Newly installed solid fuel-burning fireplaces, inserts, stoves, and heaters are code compliant and are in accordance with the following requirements:
- (1) Site-built masonry wood-burning fireplaces are equipped with outside combustion air and a means of sealing the flue and the combustion air outlets to minimize interior air (heat) loss when not in operation.
 - (2) Factory-built, wood-burning fireplaces are in accordance with the certification requirements of UL 127 and are EPA certified or Phase 2 Qualified.

GREEN BUILDING PRACTICES

(3) Wood stove and fireplace inserts, as defined in UL 1482 Section 3.8, are in accordance with the certification requirements of UL 1482 and are in accordance with the emission requirements of the EPA Certification and the State of Washington WAC 173-433-100(3).

Pellet (biomass) stoves and furnaces are in accordance with the requirements of ASTM E1509 or are EPA certified

Masonry heaters are in accordance with the definitions in ASTM E1602 and ICC IBC, Section 2112.1.

12.1.901.3 Attached garages. Newly installed door(s) in the common wall between the attached garage and conditioned space is tightly sealed and gasketed.

12.1.901.4 Wood materials. A minimum of 85 percent of newly installed wood structural panels is compliant with DOC PS 1 and/or DOC PS 2. OSB used for floor, wall, and/or roof sheathing is compliant with DOC PS 2. The panels are made with moisture-resistant adhesives. The trademark indicates these adhesives as follows: Exposure 1 or Exterior for plywood, and Exposure 1 for OSB.

12.1.901.5 Cabinets. A minimum of 85 percent of newly installed cabinets are in accordance with one or any combination of the following:

(1) All parts of the cabinet are made of solid wood or non-formaldehyde emitting materials such as metal or glass.

(2) The composite wood used in wood cabinets are in accordance with CARB Composite Wood Air Toxic Contaminant Measure Standard or equivalent as certified by a third-party program such as but not limited to, those in Appendix D.

12.1.901.6 Carpets. Carpets in the remodeled portion of the building are in accordance with the following:

(1) Wall-to-wall carpeting is not installed adjacent to water closets and bathing fixtures.

12.1.901.7 Floor materials. The following types of finished flooring materials are used. The materials have emission levels in accordance with CDPH/EHLB Standard Method v1.1 . Product is tested by a laboratory with the CDPH/EHLB Standard Method v1.1 within the laboratory scope of accreditation to ISO/IEC 17025 and certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.

(1) Hard surface flooring: Prefinished installed hard-surface flooring is installed. Where post-manufacture coatings or surface applications have not been applied, the following hard surface flooring types are deemed to comply with the emission requirements of this practice:

(a) Ceramic tile flooring

(b) Organic-free, mineral-based flooring

(c) Clay masonry flooring

(d) Concrete masonry flooring

(e) Concrete flooring

GREEN BUILDING PRACTICES

- (f) Metal flooring
- (g) Glass

(2) Carpet and carpet cushion is installed
(When carpet cushion meeting the emission limits of the practice is also installed, the percentage of compliant carpet area is calculated at 1.33 times the actual installed area.)

12.1.901.8 Interior wall coverings. At least 85 percent of newly installed interior wall coverings are in accordance with the emission concentration limits of CDPH/EHLB Standard Method v1.1. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.

12.1.901.9 Architectural coatings. A minimum of 85 percent of newly applied architectural coatings in the remodeled portion of the building are in accordance with either Section 12.1.901.9.1 or Section 12.1.901.9.2.

Exception: Interior architectural coatings that are formulated to remove formaldehyde and other aldehydes in indoor air and are tested and labeled in accordance with ISO 16000-23, Indoor air -- Part 23: Performance test for evaluating the reduction of formaldehyde concentrations by sorptive building materials.

12.1.901.9.1 New site-applied interior architectural coatings, which are inside the water-proofing envelope, are in accordance with one or more of the following:

- (1) Zero VOC as determined by EPA Method 24 (VOC content below the detection limit for the method)
- (2) GreenSeal GS-11 Standard for Paints and Coatings
- (3) CARB Suggested Control Measure for Architectural Coatings (see Table 12.1.901.9.1).

**Table 12.1.901.9.1
 VOC Content Limits For Architectural Coatings^{a,b,c}**

Coating Category	LIMIT ^d (g/l)
Flat Coatings	50
Non-flat Coatings	100
Non-flat High-Gloss Coatings	150
Specialty Coatings:	
Aluminum Roof Coatings	400
Basement Specialty Coatings	400
Bituminous Roof Coatings	50
Bituminous Roof Primers	350
Bond Breakers	350
Concrete Curing Compounds	350

GREEN BUILDING PRACTICES

Concrete/Masonry Sealers	100
Driveway Sealers	50
Dry Fog Coatings	150
Faux Finishing Coatings	350
Fire Resistive Coatings	350
Floor Coatings	100
Form-Release Compounds	250
Graphic Arts Coatings (Sign Paints)	500
High Temperature Coatings	420
Coating Category	LIMIT^d (g/l)
Industrial Maintenance Coatings	250
Low Solids Coatings	120 ^e
Magnesite Cement Coatings	450
Mastic Texture Coatings	100
Metallic Pigmented Coatings	500
Multi-color Coatings	250
Pre-treatment Wash Primers	420
Primers, Sealers, and Undercoaters	100
Reactive Penetrating Sealers	350
Recycled Coatings	250
Roof Coatings	50
Rust Preventative Coatings	250
Shellacs, Clear	730
Shellacs, □ Opaque	550
Specialty Primers, Sealers, and Undercoaters	100
Stains	250
Stone Consolidants	450
Swimming Pool Coatings	340
Traffic Marking Coatings	100
Tub and Tile Refinish Coatings	420
Waterproofing Membranes	250
Wood Coatings	275
Wood Preservatives	350
Zinc-rich Primers	340

- a. The specified limits remain in effect unless revised limits are listed in subsequent columns in the table.
- b. Values in this table are derived from those specified by the California Air Resources Board, Architectural Coatings Suggested Control Measure, February 1, 2008.
- c. Table 12.1.901.9.1 architectural coating regulatory category and VOC content compliance determination shall conform to the California Air Resources Board Suggested Control Measure for Architectural Coatings dated February 1, 2008.

GREEN BUILDING PRACTICES

- d. Limits are expressed as VOC Regulatory (except as noted), thinned to the manufacturer’s maximum thinning recommendation, excluding any colorant added to tint bases.
- e. Limit is expressed as VOC actual.

12.1.901.9.2 New site-applied interior architectural coatings are in accordance with the emission levels of CDPH/EHLB Standard Method v1.1, footnote b in Table 4.1 does not apply (i.e., maximum allowable formaldehyde concentration is 16.5 µg/m³ (13.5 ppb)). Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.

12.1.901.10 Adhesives and sealants. Interior low-VOC adhesives and sealants located inside the waterproofing envelope: A minimum of 85 percent of newly applied site-applied adhesive and sealant products used within the interior of the building are in accordance with one of the following, as applicable.

- (1) The emission levels of CDPH/EHLB Standard Method v1.1 when tested by a laboratory with the CDPH/EHLB Standard Method v1.1 within the laboratory scope of accreditation to ISO/IEC 17025 and certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those found in Appendix D.
 - (2) GreenSeal GS-36 Adhesives for Commercial Use
- OR
- (3) SCAQMD Rule 1168 (see Table 12.1.901.10.(3)), excluding products that are sold in 16-ounce containers or less and are regulated by the California Air Resource Board (CARB) Consumer Products Regulation.

**Table 12.1.901.10.(3)
Site Applied Adhesive And Sealants Voc Limits^{a,b}**

ADHESIVE	VOC LIMIT (g/l)
Indoor carpet adhesives	50
Carpet pad adhesives	50
Outdoor carpet adhesives	150
Wood flooring adhesive	100
Rubber floor adhesives	60
Subfloor adhesives	50
Ceramic tile adhesives	65
VCT and asphalt tile adhesives	50
Drywall and panel adhesives	50
Cove base adhesives	50
Multipurpose construction adhesives	70
Structural glazing adhesives	100
Single ply roof membrane adhesives	250

GREEN BUILDING PRACTICES

Architectural sealants	250
Architectural sealant primer	
Non-porous	250
Porous	775
Modified bituminous sealant primer	500
Other sealant primers	750
CPVC solvent cement	490

ABS solvent cement	325
ADHESIVE	VOC LIMIT (g/l)
Plastic cement welding	250
Adhesive primer for plastic	550
Contact adhesive	80
Special purpose contact adhesive	250
Structural wood member adhesive	140
a. VOC limit less water and less exempt compounds in grams/liter b. For low-solid adhesives and sealants, the VOC limit is expressed in grams/liter of material as specified in Rule 1168. For all other adhesives and sealants, the VOC limits are expressed as grams of VOC per liter of adhesive or sealant less water and less exempt compounds as specified in Rule 1168.	

12.1.901.11 Insulation. Emissions of newly installed wall, ceiling, and floor insulation materials are in accordance with the emission levels of CDPH/EHLB Standard Method v1.1,. Emission levels are determined by a laboratory accredited to ISO/IEC 17025 and the CDPH/EHLB Standard Method v1.1 is in its scope of accreditation. The product is certified by a third-party program accredited to ISO Guide 65, such as, but not limited to, those in Appendix D.

12.1.901.15 Lead-safe work practices. For buildings constructed before 1978, lead-safe work practices are used during the remodeling.

- 12.1.902.1.1 Spot ventilation.** Spot ventilation is in accordance with the following:
- (1) Bathrooms are vented to the outdoors. The minimum ventilation rate is 50 cfm (23.6 L/s) for intermittent operation or 20 cfm (9.4 L/s) for continuous operation in bathrooms.
 - (2) Clothes dryers (except listed and labeled condensing ductless dryers) are vented to the outdoors.

- 12.1.902.4 HVAC system protection.** One of the following HVAC system protection measures is performed.
- (1) HVAC supply registers (boots), return grilles, and rough-ins are covered during construction activities to prevent dust and other pollutants from entering the system.
 - (2) Prior to owner occupancy, HVAC supply registers (boots), return grilles, and duct terminations are inspected and vacuumed, if necessary. In addition, the coils are inspected and cleaned and the filter is replaced if necessary.

GREEN BUILDING PRACTICES

12.1.903.2 Duct insulation. All newly installed, exposed, or modified HVAC ducts, plenums, and trunks in unconditioned attics, basements, and crawlspaces are insulated to a minimum of R-6. Outdoor air supplies to ventilation systems are insulated to a minimum of R-6.

12.2 KITCHEN REMODELS

12.2.0 Applicability. In addition to the practices listed in Section 12.1, the following practices are mandatory for all kitchen remodels.

12.2.607.1 Recycling and composting. Recycling and composting by the occupants are facilitated by means of a built-in collection space in the kitchen or an aggregation/collection space in a garage, covered outdoor space, or other area for recycling containers.

12.2.611.4 Food waste disposers. Where allowed by local code, a food waste disposer is installed at each newly installed primary kitchen sink.

12.2.801.5.1 Faucets. Newly installed lavatory faucets have a maximum flow rate of 1.5 gpm (5.68 L/m) or less when tested at 60 psi (414 kPa) in accordance with ASME A112.18.1.

12.3 BATHROOM REMODELS

12.3.0 Applicability. In addition to the practices listed in Section 12.1, the following practices are mandatory for all bathroom remodels.

12.3.611.3 Universal design elements. Where existing walls are exposed and where new walls are constructed, blocking or equivalent is installed to accommodate the future installation of grab bars at water closet(s) and bathing fixture(s).

12.3.801.4 Showerheads. The total maximum combined flow rate of all newly installed showerheads that are controlled by a single valve at any point in time in a shower compartment is 1.6 to less than 2.5 gpm. Maximum of two valves are installed per shower compartment. The flow rate is tested at 80 psi (552 kPa) in accordance with ASME A112.18.1. Showerheads are served by an automatic compensating valve that complies with ASSE 1016 or ASME A112.18.1 and specifically designed to provide thermal shock and scald protection at the flow rate of the showerhead.

12.3.801.5.1 Faucets. Newly installed lavatory faucets have a maximum flow rate of 1.5 gpm (5.68 L/m) or less when tested at 60 psi (414 kPa) in accordance with ASME A112.18.1.

12.3.801.6 Water closets. All newly installed water closets have an effective flush volume of 1.28 gallons (4.85 L) or less when tested in accordance with ASME A112.19.2 or ASME A112.19.14 as applicable, and is in accordance with EPA WaterSense Tank-Type Toilets.

GREEN BUILDING PRACTICES

**12.4
BASEMENT REMODELS**

12.4.0 Applicability. In addition to the practices listed in Section 12.1, the following practices are mandatory for all basement remodels.

12.4.1 Moisture inspection. Prior to any construction activity, the basement is inspected for evidence of moisture problems. Any identified moisture problems are corrected prior to covering any walls or floors.

12.4.2 Kitchen. When the basement remodel includes a kitchen, the remodel shall also comply with the practices in Section 12.2.

12.4.3 Bathroom. When the basement remodel includes a bathroom, the remodel shall also comply with the practices in Section 12.3.

12.4.902.3 Radon control. In Radon Zone 1, passive or active radon control system is installed in accordance with ICC IRC Appendix F.

**12.5
CONVERSION OF PREVIOUSLY UNCONDITIONED SPACE TO CONDITIONED SPACE**

12.5.0 Applicability. In addition to the practices listed in Section 12.1, the following practices are mandatory for all conversions of previously unconditioned spaces into conditioned spaces such as, but not limited to attics, garages, etc.

12.5.1 Moisture inspection. Prior to any construction activity, the space to be converted shall be inspected for evidence of moisture problems. Any identified moisture problems are corrected prior to covering any ceilings, walls, or floors.

12.5.2 Kitchen. When the space to be converted includes a kitchen, the remodel shall also comply with the practices in Section 12.2.

12.5.3 Bathroom. When the space to be converted includes a bathroom, the remodel shall also comply with the practices in Section 12.3.

12.5.4 Knee walls. When the space to be converted includes a knee wall, the remodel shall also comply with 12.1.701.4.3.1.

**12.6
ADDITIONS**

12.6.0 Applicability. In addition to the practices listed in Section 12.1, the following practices are mandatory for all addition remodels.

12.6.1 Kitchen. When the addition includes a kitchen, the remodel shall also comply with the practices in Section 12.2.

GREEN BUILDING PRACTICES

12.6.2 Bathroom. When the addition includes a bathroom, the remodel shall also comply with the practices in Section 12.3.

12.6.503.5 Landscape plan. Where the addition disturbs more than 1,000 square feet of the lot, a landscape plan for the lot is developed to limit water and energy use while preserving or enhancing the natural environment. Landscaping is phased to coincide with achievement of final grades to ensure denuded areas are quickly vegetated.

12.6.602.1.1.1 Capillary break. A capillary break and vapor retarder are installed at concrete slabs in the addition in accordance with IRC Sections R506.2.2 and R506.2.3 or IBC Sections 1910 and 1805.4.1.

12.6.602.1.3.1 Exterior drain tile. Where required by the ICC IRC or IBC for habitable and usable spaces of the addition below grade, exterior drain tile is installed.

12.6.602.1.4.1 Crawlspace. Vapor retarder in unconditioned vented crawlspace for the addition is in accordance with the following, as applicable. Joints of vapor retarder overlap a minimum of 6 inches (152 mm) and are taped.

- (1) Floors. Minimum 6 mil vapor retarder installed on the crawlspace floor, extended at least 6 inches up the wall, and attached and sealed to the wall.
- (2) Walls. Dampproof walls are provided below finished grade.

12.6.602.1.8 Water-resistive barrier. Where required by the ICC IRC or IBC, a water-resistive barrier and/or drainage-plane system is installed behind exterior veneer and/or siding of the addition.

12.6.602.1.9 Flashing. Flashing is provided for the addition and for the intersection where the addition joins the existing building, to minimize water entry into wall and roof assemblies and to direct water to exterior surfaces or exterior water-resistive barriers for drainage. Flashing details are provided in the construction documents and are in accordance with the fenestration manufacturer's instructions, the flashing manufacturer's instructions, or as detailed by a registered design professional. Flashing is installed at all of the following locations, as applicable:

- (a) around exterior fenestrations, skylights, and doors
- (b) at roof valleys
- (c) at all building-to-deck, -balcony, -porch, and -stair intersections
- (d) at roof-to-wall intersections, at roof-to-chimney intersections, at wall-to-chimney intersections, and at parapets.
- (e) at ends of and under masonry, wood, or metal copings and sills
- (f) above projecting wood trim
- (g) at built-in roof gutters, and
- (h) drip edge is installed at eaves and rake edges.

GREEN BUILDING PRACTICES

12.6.602.1.14 Ice barrier. In areas where there has been a history of ice forming along the eaves causing a backup of water, an ice barrier is installed on the addition in accordance with the ICC IRC or IBC at roof eaves of pitched roofs and extends a minimum of 24 inches (610 mm) inside the exterior wall line of the building.

12.6.602.1.15 Architectural features. New architectural features that increase the potential for water intrusion are avoided:

- (1) No roof configurations that create horizontal valleys in roof design.
- (2) No recessed windows and architectural features that trap water on horizontal surfaces.
- (3) All horizontal ledgers are sloped away to provide gravity drainage as appropriate for the application.

12.6.602.4.1 Finished grade. Finished grade at all sides of the addition is sloped to provide a minimum of 6 inches (150 mm) of fall within 10 feet (3,048 mm) of the edge of the building. Where lot lines, walls, slopes, or other physical barriers prohibit 6 inches (152 mm) of fall within 10 feet (3,048 mm), the final grade is sloped away from the edge of the building at a minimum slope of 2 percent.

12.6.902.3 Radon control. In Radon Zone 1, a passive or active radon control system is installed in accordance with ICC IRC Appendix F.

CHAPTER 13

REFERENCED DOCUMENTS

1301 GENERAL

1301.1 This chapter lists the codes, standards, and other documents that are referenced in various sections of this Standard. The codes, standards, and other documents are listed herein indicating the promulgating agency of the document, the document identification, the effective date and title, and the section or sections of this Standard that reference the document. Unless indicated otherwise, the first printing of the document is referenced.

1301.2 The application of the referenced documents shall be as specified in Section 102.2.

APPENDIX A

DUCTED GARAGE EXHAUST FAN SIZING CRITERIA

A100 SCOPE AND APPLICABILITY

A101.1 Applicability of Appendix A. Appendix A is part of this Standard.

A101.2 Scope. The provisions contained in Appendix A provide the criteria necessary for complying with Section 901.3(1)(c) for the installation of ducted exhaust fans in garages. To receive points for implementing Practice 901.3(1)(c), the fan airflow rating and duct sizing for ducted exhaust fans are to be in accordance with the applicable criteria of Appendix A.

A101.3 Acknowledgment. The text of Appendix A, Section A200 and related Table are extracted from ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.) Standard 62.2-2007 *Ventilation and Acceptable Indoor Air Quality in Low-Rise Residential Buildings*, Section 7.3 and Table 7.1, respectively, and is used with the permission of ASHRAE. The referenced Section and Table numbers within the extracted text are modified to be applicable to Appendix A of this Standard.

A200 AIR FLOW RATING

A201.1 Airflow rating. The airflows required by this standard refer to the delivered airflow of the system as installed and tested using a flow hood, flow grid, or other airflow measuring device. Alternatively, the airflow rating at a pressure of 0.25 in. w.c. (62.5 Pa) may be used, provided the duct sizing meets the prescriptive requirements of Table A201 or manufacturers' design criteria.

TABLE A201
Prescriptive Duct Sizing

Fan Rating	Duct Type							
	Flex Duct				Smooth Duct			
cfm @ 0.25 in. w.g. (L/s @ 62.5 Pa)	50 (25)	80 (40)	100 (50)	125 (65)	50 (25)	80 (40)	100 (50)	125 (65)
Diameter, in. (mm)	Maximum Length, ft (m)							
3 (75)	X	X	X	X	5 (2)	X	X	X
4 (100)	70 (27)	3 (1)	X	X	105 (35)	35 (12)	5 (2)	X
5 (125)	NL	70 (27)	35 (12)	20 (7)	NL	135 (45)	85 (28)	55 (18)
6 (150)	NL	NL	125 (42)	95 (32)	NL	NL	NL	145 (48)
7 (175) and above	NL	NL	NL	NL	NL	NL	NL	NL

This table assumes no elbows. Deduct 15 ft (5 m) of allowable duct length for each elbow.

NL = no limit on duct length of this size.

X = not allowed, any length of duct of this size with assumed turns and fitting will exceed the rated pressure drop.

THIS PAGE INTENTIONALLY LEFT BLANK

APPENDIX B

WHOLE BUILDING VENTILATION SYSTEM SPECIFICATIONS

B100 SCOPE AND APPLICABILITY

B101.1 Applicability of Appendix B. Appendix B is part of this Standard.

B101.2 Scope. The provisions contained in Appendix B provide the specifications necessary for complying with Section 902.2.1 for the installation of whole building ventilation systems. To receive points for implementing Practice 902.2.1, the chosen whole building ventilation system is to be in accordance with the applicable specifications of Appendix B.

B101.3 Acknowledgment. The text of Appendix B, Section B200 and related Tables are extracted from ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc.) Standard 62.2-2010 *Ventilation and Acceptable Indoor Air Quality in Low-Rise Residential Buildings*, Section 4, and is used with the permission of ASHRAE. The referenced Section and Table numbers within the extracted text are modified to be applicable to Appendix B of this Standard. “**” indicates added reference to ICC or ASHRAE 62.2 to provide clarity.

B200 WHOLE-BUILDING VENTILATION

B201.1 Ventilation Rate. A mechanical exhaust system, supply system, or combination thereof shall be installed for each dwelling unit to provide whole-building ventilation with outdoor air each hour at no less than the rate specified in Tables B201.1a and B201.1b or, equivalently, Equations B201.1a and B201.1b, based on the floor area of the conditioned space and number of bedrooms.

Exceptions: Whole-building mechanical systems are not required provided that at least one of the following conditions is met:

- (b) the building has no mechanical cooling and is in zone 1 or 2 of the ICC* IECC Climate Zone Map (see ASHRAE 62.2*, Figure 8.2), or
- (c) the building is thermally conditioned for human occupancy for less than 876 hours per year,

and if the authority having jurisdiction determines that window operation is a locally permissible method of providing ventilation.

B201.1.1 Different Occupant Density. Tables B201.1a and B201.1b and Equations B201.1a and B201.1b assume two persons in a studio or one-bedroom dwelling unit and an additional person for each additional bedroom. Where higher occupant densities are known, the rate shall be increased by 7.5 cfm (3.5 L/s) for each additional person. When approved by the authority having jurisdiction, lower occupant densities may be used.

B201.1.2 Alternative Ventilation. Other methods may be used to provide the required ventilation rates (of Tables B201.1a and B201.1b) when approved by a licensed design professional.

B201.1.3 Infiltration Credit. Section B201.1 includes a default credit for ventilation provided by infiltration of 2 cfm/100 ft² (10 L/s per 100 m²) of occupiable floor space. For buildings built prior to the application of this standard, when excess infiltration has been measured using *ANSI/ASHRAE Standard 136, A Method of Determining Air Change Rates in Detached Dwellings*,¹ the rates in Section B201.1 may be decreased by half of the excess of the rate calculated from Standard 136 that is above the default rate. No increase to the rate in Section B201.1 is required if measured infiltration in accordance with Standard 136 is lower than the default rate.

Equation B201.1a

$$Q_{fan} = 0.01A_{floor} + 7.5(N_{br} + 1)$$

where

- Q_{fan} = fan flow rate, cfm
- A_{floor} = floor area, ft²
- N_{br} = number of bedrooms; not to be less than one

Equation B201.1b

$$Q_{fan} = 0.05A_{floor} + 3.5(N_{br} + 1)$$

where

- Q_{fan} = fan flow rate, L/s
- A_{floor} = floor area, m²
- N_{br} = number of bedrooms; not to be less than one

TABLE B201.1a (I-P)

¹ ANSI/ASHRAE Standard 136-1993 (RA 2006), *A Method of Determining Air Change Rates in Detached Dwellings*. American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., Atlanta, GA.

©ASHRAE, www.ashrae.org. Used with permission from ASHRAE Standard 62.2-2007. This material may not be copied nor distributed in either paper or digital form without ASHRAE's permission.

B201.2 System Type. The whole-house ventilation system shall consist of one or more supply or exhaust fans and associated ducts and controls. Local exhaust fans shall be permitted to be part of a mechanical exhaust system. Outdoor air ducts connected to the return side of an air handler shall be permitted as supply ventilation if manufacturers’ requirements for return air temperature are met. See ASHRAE 62.2*, Appendix B for guidance on selection of methods.

B201.3 Airflow Measurement. The airflow required by this section is the quantity of outdoor ventilation air supplied and/or indoor air exhausted by the ventilation system as installed and shall be measured using a flow hood, flow grid, or other airflow measuring device. Ventilation airflow of systems with multiple operating modes shall be tested in all modes designed to meet this section.

B201.4 Control and Operation. The “fan on” switch on a heating or air-conditioning system shall be permitted as an operational control for systems introducing ventilation air through a duct to the return side of an HVAC system. Readily accessible override control must be provided to the occupant. Local exhaust fan switches and “fan on” switches shall be permitted as override controls. Controls, including the “fan-on” switch of a conditioning system, must be appropriately labeled.

Exception: An intermittently operating, whole-house mechanical ventilation system may be used if the ventilation rate is adjusted, according to the exception to Section B201.5. The system must be designed so that it can operate automatically based on a timer. The intermittent mechanical ventilation system must operate at least once per day and must operate at least 10 percent of the time.

B201.5 Delivered Ventilation. The delivered ventilation rate shall be calculated as the larger of the total supply or total exhaust and shall be no less than specified in Section B201.1 during each hour of operation.

Exception: The effective ventilation rate of an intermittent system is the combination of its delivered capacity, its daily fractional on-time, cycle time, and the ventilation effectiveness from Table B201.2. The fan flow rate required to achieve an effective ventilation rate that is equivalent to the continuous ventilation requirement shall be calculated from the following equation:

Equation B201.5

$$Q_f = Q_r / (\epsilon f)$$

where

- Q_f = fan flow rate during the on-cycle
- Q_r = ventilation air requirement (from Table B201.1a or B201.1b)
- T_{cyc} = fan cycle time, defined as the total time for one on-cycle and one off-cycle (used in Table B201.5)
- ϵ = ventilation effectiveness (from Table B201.5)
- f = fractional on time, defined as the on-time for one cycle divided by the cycle time

TABLE B201.5
Ventilation Effectiveness for Intermittent Fans

Fractional On-Time, f	Cycle Time, T_{cyc} (h)			
	0-4	8	12	24
0.1	1.00	0.79	*	*
0.2	1.00	0.84	0.56	*
0.3	1.00	0.89	0.71	*
0.4	1.00	0.92	0.81	0.20
0.5	1.00	0.94	0.87	0.52
0.6	1.00	0.97	0.92	0.73

©ASHRAE, www.ashrae.org. Used with permission from ASHRAE Standard 62.2-2007. This material may not be copied nor distributed in either paper or digital form without ASHRAE’s permission.

APPENDIX B – WHOLE BUILDING VENTILATION SYSTEM SPECIFICATIONS

0.7	1.00	0.98	0.96	0.86
0.8	1.00	0.99	0.98	0.94
0.9	1.00	1.00	1.00	0.99
1.0	1.00	1.00	1.00	1.00

See Chapter 10 of Guideline 24 for an example of this calculation.

For values not listed, use the next higher value for cycle time or the next lower value for Fractional On-Time. Linear interpolation is allowed for intermediate Fractional On-Times. The maximum allowed Cycle Time is 24 hours and the minimum allowed Fractional On-Time is 0.1.

B201.6 Restrictions on System Type. Use of certain ventilation strategies is restricted in specific climates as follows.

B201.6.1 Hot, Humid Climates. In hot, humid climates, whole-house mechanical net exhaust flow shall not exceed 7.5 cfm per 100 ft² (35 L/s per 100 m²). (See ASHRAE 62.2*, Section 8 for a listing of hot, humid US climates.)

B201.6.2 Very Cold Climates. Mechanical supply systems exceeding 7.5 cfm per 100 ft² (35 L/s per 100 m²) shall not be used in very cold climates. (See ASHRAE 62.2*, Section 8 for a listing of very cold US climates.)

Exception: These ventilation strategies are not restricted if the authority having jurisdiction approves the envelope design as being moisture resistant.

APPENDIX C

CLIMATE ZONES

C100 SCOPE AND APPLICABILITY

C101.1 Applicability of Appendix C. Appendix C is part of this Standard. Text identified as “User Note” is not considered part of this Standard.

C101.2 Scope. The provisions contained in Appendix C provide the criteria necessary for complying with the climate-specific provisions of this Standard.

**C300
INTERNATIONAL CLIMATE ZONES**

C301 International climate zones. The climate zone for any location outside the United States shall be determined by applying Table C301(1) and then Table C301(2).

**TABLE C301(1)
INTERNATIONAL CLIMATE ZONE DEFINITIONS**

MAJOR CLIMATE TYPE DEFINITIONS	
Marine (C) Definition – Locations meeting all four criteria: <ol style="list-style-type: none"> 1. Mean temperature of coldest month between -3°C (27°F) and 18°C (65°F) 2. Warmest month mean <22°C (72°F) 3. At least four months with mean temperatures over 10°C (50°F) 4. Dry season in summer. The month with the heaviest precipitation in the cold season has at least three times as much precipitation as the month with the least precipitation in the rest of the year. The cold season is October through March in the Northern Hemisphere and April through September in the Southern Hemisphere. 	
Dry (B) Definition—Locations meeting the following criteria: Not marine and $P_{in} < 0.44 \times (TF - 19.5)$ $[P_{cm} < 2.0 \times (TC + 7)$ in SI units] where: P_{in} = Annual precipitation in inches (cm) T = Annual mean temperature in °F (°C)	
Moist (A) Definition – Locations that are not marine and not dry.	
Warm-humid Definition – Moist (A) locations where either of the following wet-bulb temperature conditions shall occur during the warmest six consecutive months of the year: <ol style="list-style-type: none"> 1. 67°F (19.4°C) or higher for 3,000 or more hours; or 2. 73°F (22.8°C) or higher for 1,500 or more hours 	

For SI: °C = [(°F)-32]/1.8; 1 inch = 2.54 cm.

**TABLE C301(2)
INTERNATIONAL CLIMATE ZONE DEFINITIONS**

ZONE NUMBER	THERMAL CRITERIA	
	IP Units	SI Units
1	9000 < CDD50°F	5000 < CDD10°C
2	6300 < CDD50°F ≤ 9000	3500 < CDD10°C ≤ 5000
3A and 3B	4500 < CDD50°F ≤ 6300 AND HDD65°F ≤ 5400	2500 < CDD10°C ≤ 3500 AND HDD18°C ≤ 3000
4A and 4B	CDD50°F ≤ 4500 AND HDD65°F ≤ 5400	CDD10°C ≤ 2500 AND HDD18°C ≤ 3000
3C	HDD65°F ≤ 3600	HDD18°C ≤ 2000
4C	3600 < HDD65°F ≤ 5400	2000 < HDD18°C ≤ 3000
5	5400 < HDD65°F ≤ 7200	3000 < HDD18°C ≤ 4000
6	7200 < HDD65°F ≤ 9000	4000 < HDD18°C ≤ 5000
7	9000 < HDD65°F ≤ 12600	5000 < HDD18°C ≤ 7000
8	12600 < HDD65°F	7000 < HDD18°C

For SI: °C = [(°F)-32]/1.8

APPENDIX D

EXAMPLES OF THIRD-PARTY PROGRAMS FOR INDOOR ENVIRONMENTAL QUALITY

D100 SCOPE AND APPLICABILITY

D101.1 Applicability of Appendix D. Appendix D is not part of this Standard.

D101.2 Scope. Appendix D provides examples of third-party programs for indoor environmental quality that can be used to demonstrate compliance with the applicable provisions of this Standard.

D200 CONFORMANCE

**TABLE D200(1)
Examples of Third-party Certification Programs**

Related Section of Standard	Examples of Third-party Certification Programs Compliant with the Corresponding Section
901.5 Cabinets	Kitchen Cabinet Manufacturers Association (KCMA) Environmental Stewardship Program (ESP)
901.6 Carpets	Carpet and Rug Institute's (CRI) Green Label Plus Indoor Air Quality Program
901.7 Hard-surface flooring	UL GREENGUARD Gold Resilient Floor Covering Institute's FloorScore Indoor Air Certification Program
901.8 Wall coverings	UL GREENGUARD Gold Scientific Certification Systems (SCS) Indoor Advantage Gold Program
901.9 Architectural coatings	UL GREENGUARD Gold Scientific Certification Systems (SCS) Indoor Advantage Gold Program Green Seal-11 Standard for Paints and Coatings UL 2768
901.10 Adhesives and sealants	UL GREENGUARD Scientific Certifications Systems (SCS) Indoor Advantage Gold Program Carpet and Rug Institute's (CRI) Green Label Plus Indoor Air Quality Program Resilient Floor Covering Institute's FloorScore Indoor Air Certification Program Green Seal-36 Standard for Adhesives for Commercial Use
901.11 Insulation	UL GREENGUARD Gold Scientific Certifications Systems (SCS) Indoor Advantage Gold Program

APPENDIX E

ACCESSORY STRUCTURES

E100 SCOPE AND APPLICABILITY

E101.1 Applicability of Appendix E. Appendix E is part of this Standard. Text identified as “User Note” is not considered part of this Standard.

E101.2 Scope. The provisions contained in Appendix E provide the criteria necessary for complying with Section 306 for accessory structures.

E201 CONFORMANCE

E201.1 Conformance. Accessory structures that meet all applicable requirements of Appendix E shall be designated as *conforming*. The *conforming* designation for the accessory structure is separate from the rating achieved by the residential buildings located on the same site or lot. Where residential buildings located on the same lot have not achieved a rating in accordance with this Standard, the accessory structures shall not be eligible for designation under this Appendix. Each accessory structure shall seek a separate designation of *conforming* based on the rules established by the Adopting Entity in accordance with Section E202. The residential building shall not receive points for any practices implemented only for the accessory structure.

E202 CONFORMANCE CRITERIA

E202 Conformance Criteria. Accessory structures shall implement practices from Chapters 5 through 10 in accordance with Sections E202.1 through E202.7.

E202.1 The practices that are mandatory for the residential building shall also be mandatory for the accessory structure unless these practices are exempt under Sections E202.5 or E202.7.

E202.2 All land development practices associated with construction of the accessory structure shall comply with the land development practices for the residential building located on the same lot.

E202.3 For the accessory structures that use the same basic construction and mechanical systems as the residential buildings, the design and construction of the accessory structures shall meet the practices or the intent of the practices implemented to achieve compliance for the residential building located on the same site or lot.

E202.4 For the accessory structures that use basic construction or mechanical systems that are different from the residential buildings, the design and construction of the accessory structures shall meet the intent of the practice implemented to achieve compliance for the residential building located on the same site or lot.

APPENDIX E - ACCESSORY STRUCTURES

E202.5 Where the residential buildings located on the same site or lot include construction methods or systems that do not have functionally equivalent methods or systems as part of the accessory structure, the accessory structure does not need to comply with any of the practices implemented for the residential building with regard to such construction methods or systems.

User note: *Examples of the practices that may be exempt from implementation in accessory structures include, but are not limited to:*

- 1) *Section 601.1 Conditioned floor area.*
- 2) *Section 601.5 Prefabricated components – accessory structure is not required to be modular if the residential building is modular.*
- 3) *Section 601.6 Stacked stories – accessory structures are not required to have more than one story if the residential building is more than one story.*
- 4) *Section 602.2 Roof surfaces – if the residential building has a landscaped roof, the accessory structure is not required to have a landscaped roof.*
- 5) *Chapter 7 Energy efficiency – unconditioned spaces in the accessory structure are not required to comply with Chapter 7.*
- 6) *Section 902.3 Radon control except for habitable space.*

E202.6 Where the accessory structure includes construction methods or systems that do not have functionally equivalent counterparts as part of the residential buildings located on the same site or lot, the Adopting Entity shall review such construction methods and systems and shall establish an approach for meeting the overall intent of the Standard with regard to the minimum acceptable threshold.

E202.7 Where the use of the accessory structure does not necessitate the implementation of a specific practice in the same manner as the practice applies to the residential building, such practice for the accessory structure may be exempted by the Adopting Entity.

User note: *Examples of the practices that may be exempted from implementation in accessory structures include, but are not limited to:*

- 1) *Section 602.1.14 Ice barrier – if the accessory structure does not contain conditioned space, ice barrier is not required.*
